- administer standard pre-hospital emergency care such as cardiopulmonary resuscitation (CPR), oxygen, bandaging, splinting, assisting in childbirth and immobilization of victims
- administer advanced pre-hospital emergency care including maintaining airways with intubation and surgical airways, administering drugs, providing manual cardiac defibrillation and external pacing, monitoring and maintaining blood and blood product transfusions, suturing minor soft tissue injuries, and urinary catheterization
- operate sophisticated equipment in advanced life-support ambulances, medevac aircraft or other advanced life-support environments
- document and record the nature of injuries and treatment provided
- assist hospital personnel as required
- maintain ambulances, equipment and supplies.

Working Conditions

This work is physically demanding. Paramedics are required to lift heavy loads (e.g. patients on stretchers). They must observe safety precautions to avoid injury when working with equipment or exposure to potentially hazardous biological agents.

Paramedics work both indoors and outdoors, often in stressful circumstances. They work eight to twelve hour shifts that include evenings, weekends and holidays. Some paramedics work part-time.

Personal Characteristics

Paramedics need the following characteristics:

- manual dexterity
- excellent oral and written communication skills
- strong leadership abilities
- sound decision-making skills
- a strong desire to help those in need
- the ability to remain firm, reassuring and efficient in moments of crisis.

Paramedics should enjoy compiling information to assess injuries and illness, having clear rules and organized methods for administering pre-hospital care and operating medical equipment.

Educational Requirements

(section revised MAY 2005)

Applicants for paramedic positions must be registered as an EMT-A (emergency medical technician - ambulance) and have a high school diploma with English 30 or 33, Biology 30 or Science 30 and Math 20 or 23 (or equivalent).

Emergency Medical Technologist - Paramedic training programs are offered by a number of public colleges, private schools and other organizations in Alberta. A current list of programs is posted on the **Alberta College of Paramedics** website.

Other Requirements

Under Alberta's Health Disciplines Act and Emergency Medical Technicians Regulation, only members of the Alberta College of Paramedics (ACP) who are registered as emergency medical technologist - paramedics may call themselves Emergency Medical Technologist - Paramedics. Registered members provide health services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Paramedics are employed by public and private ambulance services. Industries such as the oil and gas industry may employ paramedics to provide emergency medical aid on large job sites.

Advancement opportunities in this occupation are limited. With further education, paramedics may move into related health care occupations.

Paramedics are part of the larger National Occupational Classification 3234: Ambulance Attendants and Other Paramedical Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,650 Albertans are employed in the Ambulance Attendants and Other Paramedical Occupations group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since paramedics form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for paramedics.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for EMT-Ps vary depending on location (e.g. rural or urban setting) and type of employer (e.g. private company, municipality, regional health authority).

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Ambulance Attendants and Other Paramedical Occupations group earned from **$14,600 to $39,600 a year.** The average salary was **$53,400 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Engineering Design and Drafting Technologist

Produced AUGUST 2005

Engineering design and drafting technologists develop engineering designs and drawings from preliminary concepts and specifications, and prepare technical reports, construction specifications, cost/materials estimates and contract/tender documents.

NOC Number(s): 2253.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I O**

Duties

Engineering design and drafting technologists usually work as part of a team of engineers and other professionals. They use computer-aided design (CAD) applications, scientific calculators and other equipment to prepare:

- engineering plans
- flow diagrams and schematics
- layouts
- specifications
- maps
- detailed construction or assembly drawings.

This involves using prescribed methods of design and applying industry standards, codes and regulations.

Engineering design and drafting technologists also are involved in related activities such as:

- estimating project materials and costs
- administering contracts
- preparing and interpreting specifications
- writing reports
- supervising the work of technicians.

Specific duties and responsibilities vary depending on the field in which engineering design and drafting technologists work. For example, they may work in:

- civil engineering
- urban and regional planning
- industrial control and automation
- process design
- machine design
- pressure vessel design
- piping design
- electrical design
- heating, ventilation and air conditioning (HVAC) design.

Working Conditions

Engineering design and drafting technologists usually work in office environments. They generally work standard office hours although overtime occasionally may be required to meet deadlines.

Senior technologists also may be involved in field and site work, and project supervision.

Personal Characteristics

Engineering design and drafting technologists need the following characteristics:

- the ability to pay close attention to detail and be precise and accurate
- good eye-hand co-ordination and manual dexterity
- the ability to visualize three-dimensional objects from two-dimensional drawings and visualize the relationships between parts in machinery and systems
- the ability to communicate design ideas and solutions clearly and concisely orally and in writing
- aptitude for mathematics and physics
- good problem solving abilities.

They should enjoy taking a methodical approach to their work, analyzing data and finding innovative solutions to problems, and working with equipment and instruments at tasks that require precision.

Educational Requirements

(section revised DECEMBER 2005)

The minimum educational requirement is a **related two year technical diploma or a university degree**. For information about diploma programs in specific fields, see the Avionics Technologist, Civil Engineering Technologist, Electrical Engineering Technologist, Electronics Engineering Technologist, Geomatics/Surveying Technologist, Industrial Designer, Mapping Technologist, Mechanical Engineering Technologist, and Urban, Regional and Park Planners occupational profiles.

In Alberta, the following institutions offer two year Engineering Design and Drafting diploma programs:

- **Lethbridge Community College**. Applicants are required to have a minimum 50 per cent in Pure Math 30 or a minimum of 65 per cent in Applied Math 30, 50 per cent in Physics 20 or 50 per cent in Science 30, 60 per cent in English Language Arts 30-2 or English Language Arts 30-1, and a basic understanding of computer technology.
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton. The minimum admission requirement is a high school diploma or equivalent with Grade 12 English, Pure Math 30 (or equivalent), and one of: Science 30, Physics 30 (preferred) or Chemistry 30. Students presenting Applied Math 30 may be required to upgrade. This program is accredited nationally. Part of this program is available through Continuing Education.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary. The minimum admission requirement is a high school diploma or equivalent with English Language Arts 30-1 or English 30, Pure Math 30 (or Math 30), and Science 30 or Physics 20. This program is accredited nationally.

Continuing education programs are often offered on an as needed basis.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Engineering design and drafting technologists are employed by:

- private machine design firms
- engineering consulting firms
- municipal, provincial and federal government departments
- manufacturing and assembly companies
- companies in the petrochemical, food processing, pulp and paper and energy industries
- electronic manufacturing companies
- construction and concrete precast companies.

Experienced technologists may advance to supervisory and management positions, or establish their own design and drafting companies. There are international employment opportunities with engineering consulting firms operating in international markets.

Engineering design and drafting technologists are part of the larger National Occupational Classification 2253: Drafting Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,150 Albertans are employed in the Drafting Technologists and Technicians occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since engineering design and drafting technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Drafting Technologists and Technicians occupational group working part-time or full-time earned from **$16,600 to $150,100 a year.** The average salary was **$54,600 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

English as a Second Language Teacher - Adults

Produced NOVEMBER 2005

English as a second language (ESL) teachers provide English language and lifeskills instruction to immigrants, international students and others whose first language is not English.

NOC Number(s): 4131
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D S**

Duties

The main objective of ESL instruction is to develop the second language proficiency of new immigrants and international students to the point where they can participate effectively in an English-speaking environment. Traditionally, ESL programs have been designed to improve the following skills:

- listening comprehension
- reading comprehension
- pronunciation and intonation
- oral fluency
- writing and composition
- grammar and vocabulary.

Beginning ESL courses generally focus on topics that help newcomers participate in their communities or help overseas students begin to develop basic English proficiency. For example, themes for new immigrants may include:

- renting accommodation
- using public transportation
- banking and shopping
- using telephones
- health or medical care
- travel
- making friends
- citizenship education.

Cultural orientation as well as language instruction is provided to help students adjust to Canadian life as quickly and successfully as possible. Field trips (to banks, grocery stores, shopping malls, cultural and job sites), guest speakers and research projects help immigrants learn about their new country and share aspects of their own culture and country.

Intermediate and advanced level classes generally focus on improving fluency and correctness in English, and providing transitional support for those wishing to go on to further training or educational opportunities. International students often plan to return to their own countries but expect to use English for personal development, to complement studies in their home countries or for business and commerce.

Some ESL classes include an employment component with topics such as interview strategies, work vocabulary and workplace communication strategies. Some ESL classes are designed specifically to help people prepare for work in particular types of workplaces or occupations, or to prepare for further education.

Working Conditions

Classroom facilities vary greatly. Classes may be taught:

- in academic environments (public schools, language centres, post-secondary institutions, private institutes)
- in community facilities (community centres, churches, temples, synagogues)
- at jobsites (factories, hospitals, hotels, offices).

Class sizes vary from one-on-one tutoring situations to academic classes of 20 or more students.

Personal Characteristics

ESL teachers need the following characteristics:

- excellent communication skills
- an interest in language
- imagination, energy, creativity, patience, enthusiasm, commitment and adaptability
- a sense of humour
- the ability to work well in a multicultural environment and demonstrate respect for other values and cultures
- the ability to create an environment in which students feel comfortable and will participate
- the ability to make classes relevant to the needs and interests of diverse groups.

They should enjoy co-ordinating information and preparing teaching materials, supervising and evaluating student progress, and helping others.

Educational Requirements

(section revised JANUARY 2006)

No consistent academic requirement has been established for teachers of adult ESL classes. Each employer sets its own hiring policies, requirements and standards. Consequently, required qualifications vary greatly. However, many employers prefer to hire applicants who have a bachelor's degree and accreditation from **Alberta Teachers of English as a Second Language (ATESL)** or **TESL Canada (Teaching English as a Second Language in Canada)**.

It is not necessary to be fluent in another language to teach adult ESL, although learning a second language does provide insight into the language learning process.

Work-related expertise is required to teach courses that are designed to prepare people for work in particular types of workplaces or occupations.

Accreditation requirements for ATESL members include:

- a bachelor's degree
- a diploma program in ESL instruction which includes at least 250 hours of course work
- 250 hours of classroom ESL teaching experience.

Candidates for ATESL accredition who do not have these qualifications may be considered on an individual basis.

Accreditation requirements for TESL Canada members include a university degree and instruction in methodology and theory, a supervised adult ESL classroom practicum and a minimum number of hours of teaching experience:

- Professional Standard I requires a bachelor's degree, 100 hours of methodology and theory, 20 hours practicum and 1,000 hours of teaching experience.
- Professional Standard II requires a bachelor's degree, 250 hours of methodology and theory, 20 hours of practicum and 1,500 hours of teaching experience.
- Professional Standard III requires a master's degree in applied linguistics or TESOL and 20 hours practicum, or a Professional Standard I, master's degree in a related field and 2,000 hours of teaching experience.

Professional Standard I is entry level. Employment in Canada often requires Professional Level II.

Both ATESL and TESL Canada offer interim accreditation to recent graduates of ESL training programs which can become permanent when the required hours of teaching experience have been reached.

School boards and most post-secondary institutions require a Bachelor of Education (B.Ed.) degree or teacher's certificate with a specialization in teaching English as a second language (TESL). Some institutions require a graduate diploma or Master's degree in TESL or applied linguistics. For information about B.Ed. degree programs, see the Elementary School Teacher and Secondary School Teacher occupational profiles.

In Alberta, the following institutions offer training programs that may lead to ATESL or TESL Canada accreditation:

- The **University of Alberta** in Edmonton offers an eight-course Teaching English as a Second Language diploma program and a course-based Master of Education (M.Ed.) degree program. The entrance requirement for both programs is a bachelor's degree. Applicants for the diploma program must have completed Linguistics 101.
- The **University of Calgary** offers a four course Teaching English as a Second Language certificate, an eight course diploma program, and a course-based M.Ed. degree program. The entrance requirement is a bachelor's degree with a grade point average (GPA) of at least 3.0/4 including Linguistics 201 and 203 or Linguistics 205 and 207.

The above diploma programs meet requirements for TESL Canada Professional Standard II and the master's degree programs meet requirements for Professional Standard III.

TESL Canada also accredits graduates of the ACE TESOL (Teaching English as a Second Language) certificate program offered at **Mount Royal College** in Calgary. This program meets Professional Standard I requirements. Applicants must be at least 18 years of age.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other private and public post-secondary institutions may offer short training courses for people planning to teach English as a second language overseas.

Employment and Advancement

(section revised JANUARY 2006)

Adult ESL classes are taught in:

- universities
- colleges
- private schools
- community centres
- churches, synagogues and temples
- agencies and organizations serving immigrants.

There are few permanent teaching positions available in this occupation. For most ESL teachers, work tends to be on a short-term contract basis or part-time.

ESL teachers are part of the larger National Occupational Classification 4131: College and Other Vocational Instructors. In Alberta, over 75 per cent of people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- changes in government policies
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 11,150 Albertans are employed in the College and Other Vocational Instructors occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 170 to 290 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since ESL teachers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for ESL teachers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Hourly wages for teaching adult ESL courses range from **$15 to $40 an hour** in the private sector and **$30 to $50 an hour** in publicly funded institutions **(2005 estimates).** However, many teachers are only paid for actual classroom teaching time (contact hours) and not for the substantial amount of time they spend preparing. Some teachers are hired on short-term/sessional contracts; others have permanent positions with benefits and a negotiated pay grid.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the College and Other Vocational Instructors occupational group working part-time or full-time earned from **$13,600 to $76,000 a year.** The average salary was **$48,200 a year.**

Entomologist

Produced SEPTEMBER 2005

Entomologists study the classification, life cycle and habits of insects and related life forms, and plan and implement insect surveys and pest management programs.

NOC Number(s): 2121.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Entomologists investigate the biology, roles and management of:

- insect pests
- beneficial insects such as plant pollinators, insect parasites and insect predators
- other insects and arthropods (e.g. spiders and mites).

Duties and responsibilities vary from one position to another but, in general, entomologists:

- study insect physiology, distribution and habitat, and recommend methods of preventing the importation and spread of harmful insects
- investigate and evaluate the role of insect pests in forests, agriculture, human health and the environment
- study the evolution of insects and classify them using molecular and other techniques
- discover and describe new species of insects
- monitor insect biodiversity as part of ongoing efforts to preserve ecological integrity in natural landscapes
- conduct research into the impact and control of insect pest problems
- develop biological methods of controlling harmful insects and weeds (e.g. using pathogens, predators, parasites or genetic methods) and and implement pest management programs
- conduct field and laboratory tests of pesticides to evaluate their effect on different species of insects under different conditions
- preserve and maintain museum collections
- prepare and provide information to help the public identify insects and other anthropods
- co-ordinate public awareness and education programs.

Entomologists usually specialize in particular fields of study such as applied agriculture and forest entomology, apiculture (bee culture), classification and evolution, insect ecology, insect physiology or insecticide toxicology. They often work with other scientists on joint projects such as developing crops resistant to insects, or containing animal and plant diseases caused by insects transmitting infectious organisms (e.g. mosquitoes spreading West Nile Virus, bark beetles spreading Dutch elm disease).

Working Conditions

Entomologists may work more than a standard 40 hour week particularly when involved in research studies. They work indoors conducting experiments in laboratories, greenhouses, controlled environment chambers and museums, and outdoors conducting field research. The may spend considerable time on data preparation and basic analysis. Field work can be strenuous and may require living in remote locations for extended periods of time. Safety precautions are required to avoid injury when handling poisonous or allergenic insects and toxic chemicals.

Personal Characteristics

Entomologists need the following characteristics:

- a keen interest in invertebrate biology
- the intellect, curiosity, creativity, patience and perseverance required to pursue answers to complex research

questions
- the ability to work well independently and as part of a team
- the ability to communicate effectively with their colleagues and the general public.

They should enjoy synthesizing information to conduct studies and prepare reports, using instruments and equipment to perform tasks requiring precision and supervising research projects.

Educational Requirements

The minimum academic requirement is a **four year bachelor's degree** in the biological sciences or agriculture. Research positions in universities, government and industrial organizations require a graduate degree: a master's degree (M.Sc.) or a doctorate (PhD).

The **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree program in Biological Sciences with specialization or honours in animal biology, and M.Sc. and PhD degree programs in which research focused on insects may be conducted. The entrance requirement for the B.Sc. degree program is a competitive average (ranging from 65 to 80 per cent) in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Biology 30, Chemistry 30 and one other approved 30-level humanities, fine arts or science subject (Physics 30 is recommended). Admission to the honours program requires an 80 per cent average.

Transfer programs and bachelor's degree programs in biological sciences are offered by post-secondary institutions throughout the province. Admission requirements vary depending on the program and the institution, but generally include a high school diploma or equivalent with an average of at least 60 per cent in ELA 30-1 or English 30, Pure Math 30 or Math 30, Biology 30, Chemistry 30 and one other approved 30-level subject (Physics 30 recommended). It is the student's responsibility to ensure that the transfer courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Professional Biologist is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Professional Biologist, you must be a registered member of the Alberta Society of Professional Biologists (ASPB). You do **not** have to be registered with ASPB if you do not call yourself a Professional Biologist.

Employment and Advancement

(section revised JANUARY 2006)

Entomologists are employed by municipal, provincial and federal governments, post-secondary institutions and museums. Pharmaceutical and chemical manufacturing companies and large pest control companies also hire entomologists to conduct research and demonstrate new products for people in the agriculture, forestry and medical communities. A few entomologists are independent consultants who provide insect identification services, advise clients on insect control or conduct environmental impact assessments.

Graduates of bachelor's degree programs may be hired for technical positions in research programs, or entry level jobs such as forest health survey coordinator, food products inspector, or sales and customer service positions. A PhD is generally required for independent research, administrative work or teaching at the post-secondary level.

Entomologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:
- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:
- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since entomologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for entomologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Entomologists' salaries vary considerably depending on their qualifications and research responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists occupational group working part-time or full-time earned from **$29,400 to $103,200 a year.** The average salary was **$64,800 a year.**

Environmental Auditor

Produced SEPTEMBER 2005

Environmental auditors assess the environmental performance of operations in business and industry.

NOC Number(s): 2263
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Environmental auditors assess the management of operations in all types of businesses to ensure corporate and government standards of environmental control are being met. Their objective is to detect any existing or potential environmental problems in the company's operations, and take appropriate action.

Environmental auditors may conduct compliance audits or management system audits:

- **Compliance audits** assess how well businesses meet standards set out in environmental legislation and guidelines, and internal company guidelines.
- **Management performance audits** measure conformance to management system criteria.

Depending on their areas of specialization, environmental auditors may:

- review the overall operations of the businesses they are assessing
- select and manage an audit team
- gather data using questionnaires and on-site inspections and interviewing
- examine clients' records for appropriate government permits and requirements, safety standards, maintenance, and inventory control measures
- review emergency handling procedures, employee training (for compliance with corporate and government standards), environmental monitoring programs and waste management efforts
- identify alternate clean-up methods, where appropriate
- write final audit reports and discuss findings and recommendations with clients
- make presentations to directors and management
- help businesses develop environmental management plans (policies and procedures).

Working Conditions

Environmental auditors work primarily in offices but also visit manufacturing plants and assess operations outdoors. Inspecting industrial sites and meeting with clients may involve travel away from the office.

Personal Characteristics

Environmental auditors need the following personal characteristics:

- open-minded
- tactful
- observant and perceptive
- adaptable
- persistent
- able to critically analyze information and make logical, timely decisions
- good oral and written communication skills
- able to work independently as well as work effectively with others.

They should enjoy having clear rules and guidelines for their work, analyzing data and finding innovative solutions to problems and directing the work of others.

Educational Requirements

Environmental auditors must be knowledgeable about environmental management methods and techniques, related legislation and regulations, and business and industrial operations. Most have **post-secondary education in scientific or engineering fields** such as biology, chemistry, environmental sciences or environmental engineering. They may have an undergraduate degree in engineering, science, environmental law or environmental studies, or related work experience and a technical diploma specializing in environmental technology, chemical technology or engineering technology. For on-site audits, safety training may be required.

Prior to enrolling in an education program, prospective students should contact associations and employers in this field to investigate education options and employment possibilities. Specific courses are required for accreditation. Environmental auditors who have the authority to sign off audits are generally required to have a related professional designation or university degree.

Post-secondary institutions throughout Alberta offer programs in biology, chemistry, biochemistry, environmental science and related disciplines. The following institutions offer two year diploma programs specifically in environmental science or technology:

- **Keyano College** in Fort McMurray offers a two year Environmental Technology diploma program. The entrance requirement is a high school diploma with Grade 11 math, chemistry and biology.
- **Lakeland College** in Vermilion offers two year diploma programs in Agro-Environmental Technology, Conservation and Vegetation Management Technology, Environmental Conservation and Reclamation, Environmental Protection Technology, and Natural Resources Technology. The entrance requirement for all programs is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in English Language Arts 30-2 or English 33), Math 30 or Pure Math 30 (or 65 per cent in Applied Math 30 or Math 33), Biology 30 and Chemistry 30.
- **Lethbridge Community College** offers a two year Environmental Sciences diploma program with specializations in renewable resource management, and environmental assessment and restoration. The entrance requirement is a high school diploma with English Language Arts 30-1, Biology 20, Chemistry 20 and Applied Math 20, or equivalent. Applicants who do not have at least 70 per cent in ELA 30-1 and Applied Math 20 will be required to complete a computerized placement test. Medicine Hat College also offers the first year of this program.
- **Mount Royal College** in Calgary offers a one year certificate program in Environmental Technology. This program is designed for students who have experience in environmental management or related fields.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Biological Sciences Technology diploma program with specializations in environmental sciences and renewable resources. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2, Chemistry 30, Biology 30 and Applied or Pure Math 30 (or equivalent).
- **Olds College** offers a two year Land and Water Resources diploma program. The entrance requirement is a high school diploma with Pure or Applied Math 20 (or equivalent) and Chemistry 20, Biology 20 or Science 30.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers two year Environmental Technology diploma program. The entrance requirement is a high school diploma with at least 60 per cent in Pure Math 30 and Chemistry 30, and at least 50 per cent in English Language Arts 30-2 (or equivalent).

The following post-secondary institutions offer degree programs specifically in environmental science:

- **Concordia University College of Alberta** in Edmonton offers three and four year B.Sc. degree programs in environmental science. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1, Pure Math 30, Chemistry 30 and Biology 30 (or equivalent) and one other appropriate 30-level subject.
- **The King's University College** in Edmonton offers three and four year Bachelor of Arts and B.Sc. degree programs in environmental studies. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1, Pure Math 30, and one of Biology 30 or Chemistry 30 (both are recommended), and two other approved 30-level courses.
- **Lakeland College** in Vermilion a Bachelor of Applied Environmental Management degree program with a reclamation/remediation stream and a monitoring/environmental protection stream. The entrance requirement is successful completion of a related two year diploma program from a recognized post-secondary institution.
- The **University of Alberta** offers four year degree programs in Environmental and Conservation Sciences (Edmonton), Environmental and Conservation Sciences/Native Studies Combined (Edmonton) and Environmental Science (Camrose). The entrance requirement for these programs is a competitive average of 65 to 80 per cent in English Language Arts 30-1, Pure Math 30, Chemistry 30, Biology 30 and one other Grade 12 subject.

- The **University of Calgary** offers a four year B.Sc. degree program in Environmental Science. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1, Pure Math 30 (or equivalent), Chemistry 30, two of the following: Biology 30, Math 31, Physics 30, and one other 30-level subject selected from an approved list. Biology 30 is required for the biological sciences concentration. Students must complete a year of appropriate university studies before being admitted to this program.
- The **University of Lethbridge** offers a four year B.Sc. degree program in Environmental Science. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1, Biology 30, Chemistry 30, Pure Math 30 (or equivalent) and a fifth Grade 12 subject (Math 31 recommended).

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Canadian Environmental Auditing Association offers certification programs leading to the following professional designations:

- Certified Environmental Auditor - CEA
- Certified Environmental Sustainable Forest Management Auditor - CEA(SFM)
- Environmental Management System Auditor - EMS(A).

Employment and Advancement

(section revised JANUARY 2006)

Environmental auditors may be employed by or work on a contract basis for:

- engineering and environmental consulting firms
- municipal, provincial and federal government departments
- utility companies
- manufacturing firms
- resource-based companies (agriculture, forestry, mining, oil and gas).

Environmental auditors may advance to supervisory and management positions.

Environmental auditors are part of the larger National Occupational Classification 2263: Inspectors in Public and Environmental Health and Occupational Health and Safety. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**
- **Professional and Technical Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,100 Albertans are employed in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since environmental auditors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for environmental auditors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for environmental auditors vary considerably depending on their qualifications and the responsibilities of the position.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group working part-time or full-time earned from **$18,300 to $172,300 a year.** The average salary was **$62,500 a year.** Salaries for environmental auditors who do not have management responsibilities are generally considerably less than the top of the range suggests.

© Government of Alberta, Human Resources and Employment

Environmental Education Specialist

Produced OCTOBER 2005

Environmental education specialists help create an awareness of the relationship between human activities and the natural environment. They develop and promote strategies that encourage others to make responsible choices regarding consumer decisions, government policies and corporate responsibilities.

NOC Number(s): 4131
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D S

Duties

Environmental education specialists promote taking responsible actions towards the natural environment. They may work in formal education environments or business or industry settings.

Duties and responsibilities vary from one position to another in this evolving field but, in general, environmental education specialists:

- research specific issues such as consumerism, lifestyle choices, resource development, wildlife management, forestry and water quality
- synthesize environmental information from many sources and make it understandable to others through written articles and presentations
- set up internal programs within business and industry to promote responsible attitudes towards the environment
- teach courses and lead workshops and other programs about issues related to living within and caring for the natural environment
- promote the integration of scientific, social and economic factors in environmental decisions
- produce educational materials for schools, youth groups, communities, field programs and libraries
- interpret natural and human history through field study groups and school programs
- educate the public through newspaper and magazine columns, articles, and radio and television commentaries
- integrate environmental education into traditional subject areas such as science, social studies, economics, language arts and mathematics
- participate in meetings and conferences with other people interested in conserving and interpreting the natural environment.

Environmental education specialists may specialize in activities such as the following:

- **environmental consumer education,** providing information about consumer goods and services and describing issues that may influence living and purchasing habits
- **concern for the natural world,** offering nature programs through schools, nature centres, television programs or working with special interest groups such as bird watchers
- **responsible actions,** providing information that empowers people to take action for the environment in the work place, at home and at school
- **issues management,** providing people with perspectives from all sides of an issue so their decisions are based on a solid understanding of the scientific, social and economic impacts of a decision.

Working Conditions

Working conditions vary considerably in this occupation. Environmental education specialists may be required to work some evenings and weekends. They usually work indoors much of the time, although this also varies from one position to another. They may visit outdoor worksites or nature centres as part of their research activities, or conduct outdoor presentations to groups. They attend many meetings outside of their offices and may be required to travel.

Personal Characteristics

Environmental education specialists need the following characteristics:

- strong interpersonal, communication and problem-solving skills
- a strong interest in environmental issues
- the analytical skills required to determine what is valid and reliable information
- writing skills for developing educational guides, and preparing reports and articles
- the ability to work collaboratively with diverse groups of people
- consulting skills to assess needs and develop potential action plans.

They should enjoy helping people and influencing society, and compiling, interpreting and co-ordinating information in innovative ways to prepare teaching materials.

Educational Requirements

Environmental education specialists must be able to present complex issues and scientific data in a way that is understandable to their target audiences. Most have a combination of related post-secondary education and experience. Some employers prefer to hire environmental education specialists who have a bachelor's degree in education or courses in adult education. Volunteer or work experience related to natural resource management or education is a definite asset.

Post-secondary institutions throughout Alberta offer bachelor's degree programs in education, environmental science and related disciplines. For information about degree programs in education or adult education, see the Secondary School Teacher and College, Technical or Vocational Instructor occupational profiles. For information about science degree programs, see other appropriate profiles such as the Biochemist, Botanist, Environmental Auditor, Environmental Engineer, Marine Biologist and Wildlife Biologist profiles.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Environmental education specialists work for the following types of organizations:

- environmental and conservation societies
- naturalist clubs
- outdoor education centres
- heritage and interpretative centres
- school boards
- corporations
- government departments.

Some are self-employed consultants who work on a contract basis for specific projects.

There are many volunteer work opportunities with not-for-profit environmental groups which can provide useful practical experience and important contacts for a job search.

Environmental education specialists are part of the larger National Occupational Classification 4131: College and Other Vocational Instructors. In Alberta, over 75 per cent of people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 11,150 Albertans are employed in the College and Other Vocational Instructors occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 170 to 290 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since environmental education specialists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for environmental education specialists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the College and Other Vocational Instructors occupational group working part-time or full-time earned from **$13,600 to $76,000 a year.** The average salary was **$48,200 a year.** Environmental education specialists' incomes may be **considerably lower** particularly for those employed by not-for-profit organizations.

Environmental Engineer

Produced JUNE 2004

Environmental engineers design systems, processes and equipment for air, water and soil pollution assessment, prevention and control, solid and hazardous waste management, and the remediation of contaminated sites.

NOC Number(s): 2131
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I O D

Duties

Environmental engineers work closely with facility managers and other professionals. They may be involved in activities ranging from providing expert testimony in an environmental lawsuit to working on environmental assessments, site development, water purification, wastewater treatment, soil remediation, air pollution control or hazardous waste assessment. They may:

- assess industrial sites to determine if they satisfy environmental quality criteria
- advise companies and governments about the clean up necessary to protect the health of human beings and the environment
- design safe solid waste transfer, treatment (e.g. composting) and disposal facilities (e.g. landfills), water supply and treatment systems or wastewater collection and treatment systems
- apply risk-based approaches to develop and recommend procedures to clean up sites that have been contaminated
- determine how to use, protect and treat surface and groundwater effectively and economically
- assess the potential environmental impact of land use projects (e.g. pipelines, gravel pits) and new and existing manufacturing facilities (e.g. chemical plants) on air, water and land
- determine whether industries or municipalities are complying with environmental regulations
- promote integrated solid and hazardous waste management planning programs
- monitor and manage air, water or soil quality
- research and develop methods for minimizing the generation of air, liquid and solid wastes, and treating existing wastes
- design waste treatment and pollution control equipment
- advise industry and government regarding environmental policies and standards
- work with others in their organizations to acquire permits to operate or construct facilities.

Environmental engineers may be called air quality engineers, industrial hygiene engineers, hazardous waste management engineers, solid waste management engineers, site remediation engineers or water and wastewater engineers. Very often, environmental engineers work in co-operation with environmental scientists, planners and hazardous waste management technicians as well as lawyers, bankers and regulators.

To plan and manage systems, environmental engineers use computers and computer simulation models as well as monitoring instruments and techniques. Constant skill and knowledge upgrading is required to keep up to date with new developments in engineering and environmental science.

Working Conditions

Working conditions for environmental engineers vary depending on their duties. They work in offices and outdoors in all kinds of weather at field sites. Sites may smell or be noisy, dirty or cluttered. When working in hazardous conditions, environmental engineers must wear personal protective equipment. Travel for extended periods of time may be required.

Personal Characteristics

Environmental engineers need to be:

- able to think logically and solve problems, sometimes working with limited data
- willing to deal with unidentified hazards
- patient, organized and comfortable with detailed work
- comfortable working with mechanical devices and instruments
- skilled communicators, in person and in writing.

Environmental engineers typically value:

- decision-making opportunities
- working independently
- problem-solving
- variety
- creativity
- helping to promote a safe, clean environment.

Educational Requirements

The minimum education requirement for environmental engineers is **a degree in environmental engineering or a related discipline** (e.g. civil or chemical engineering). They should be able to use advanced technology (e.g. computer models and geographic information systems) in assessing environmental contamination.

In Alberta, the **University of Alberta** in Edmonton and the **University of Calgary** offer B.Sc., M.Eng., M.Sc. and PhD degree programs in engineering disciplines. Some disciplines, such as civil engineering, offer Environmental Engineering specializations at the Bachelor's degree level. The University of Calgary offers a multi-disciplinary graduate level specialization in Environmental Engineering involving four engineering departments: civil, chemical and petrochemical, geomatics, and mechanical and manufacturing (for more information, see the Civil Engineer, Chemical Engineer, Geomatics/Surveying Engineer, Manufacturing Engineer and Mechanical Engineer profiles).

The minimum admission requirement for the bachelor's degree programs in engineering is an overall average of at least 78 or 80 per cent in English 30, Pure Math 30 or equivalent, Math 31, Chemistry 30 and Physics 30.

Both the University of Calgary and the University of Alberta also offer a co-operative education or internship program consisting of periods of academic study alternating with periods of planned work experience in industry. The co-operative engineering degree program usually takes five years to complete.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Environmental engineers may work in:

- consulting engineering firms
- municipal, provincial and federal government departments of transportation, energy, public works or the environment
- manufacturing industries
- chemical and petrochemical industries
- waste management companies

- academic and research institutes
- resource industries (e.g. mining, oil and gas).

Some environmental engineers move into related fields such as recycling management or environmental auditing. Those who have M.Sc., M.Eng. or PhD degrees may work in consulting, research or teaching positions at the university or college level.

Environmental engineers are part of the larger National Occupational Classification 2131: Civil Engineers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,950 Albertans are employed in the Civil Engineers occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since environmental engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for environmental engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Civil Engineers occupational group working part-time or full-time earned from **$22,900 to $152,900 a year.** The average salary was **$77,400 a year.**

© Government of Alberta, Human Resources and Employment

Ergonomist

Produced JANUARY 2006

Ergonomists study the relationships among people, equipment, and working or living environments, and apply their knowledge to enhance performance, comfort and safety.

NOC Number(s): 4161.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D M

Duties

Ergonomics is about ensuring a good fit between people, the tools, equipment and products they use and the environments in which they live, play, travel and work. It is a multi-disciplinary field that encompasses:

- life/biological sciences such as biomechanics, kinesiology and medicine
- behavioural/social sciences such as psychology, sociology and anthropology
- technical sciences such as systems design, mathematical modelling and operations research.

Ergonomists ensure that the design of products, tasks and work methods is compatible with human characteristics and maximizes safety, efficiency and well-being. To accomplish this objective, they may:

- evaluate human/machine systems by observing, measuring and evaluating how people interact with each other, things such as equipment and work spaces, and environments
- develop experimental designs, use data collection instruments and procedures, and make comparisons with criterion measures to study system performance
- collect information by investigating environments and working activities to determine and optimize existing processes and practices
- analyze the demands placed on workers by assessing physical, postural, physiological, cognitive, stress, job and work attitude parameters
- assess physical environments by using measuring instruments, subjective assessments, performance and response measurements, modelling and simulations
- assess the suitability of products and systems in relation to the motor, sensory and cognitive capabilities of operators and users
- design and implement systems by conducting audits and employing creative techniques such as focus groups, participatory design and follow-up groups
- teach workers about body mechanics and work practices
- consult with other specialists concerning design and development problems to gather and integrate data from a variety of scientific and professional points of view
- advise organizations regarding human factors in personnel management and the specification, design, evaluation, operation and maintenance of products and systems.

Working Conditions

Ergonomists work in diverse settings with a wide variety of people: workers, union officials, managers, other professionals, students and the public. They may work in laboratories, industry settings, offices or teaching environments.

Overtime, evening and weekend work may be required to meet project deadlines or to assess systems involving shift workers.

Personal Characteristics

Ergonomists need the following characteristics:

- an interest in and curiosity about how people interact with their environments
- creativity
- the ability to work independently or with a team.

They should enjoy co-ordinating information, developing innovative approaches to problems, consulting with people, taking responsibility for projects, and taking a systematic approach to conducting research.

Educational Requirements

The minimum education requirement is a bachelor's degree in a related discipline. Increasingly, ergonomists have related certification or post-secondary education such as a master's degree in ergonomics, psychology, human kinetics, human factors, biomedical engineering or a related field. Those working in systems design may have a master's degree in industrial engineering (for more information, see the Industrial Engineer occupational profile).

In Alberta, the following universities offer master's degree programs related to ergonomics:

- The **University of Alberta** in Edmonton offers a Master of Science in Physical Therapy degree program with a specialization in ergonomics and a PhD program in Rehabilitation Sciences.
- The **University of Calgary** offers a Master in Environmental Design degree program with specializations in environmental science, industrial design, and planning; and M.Sc. and PhD degree programs in psychology and in perception, aging and cognitive ergonomics.

In general, the entrance requirement for master's degree programs is an acceptable average in the final two years of a related four year bachelor's degree program (e.g. in occupational therapy, kinesiology, engineering or psychology) with course work in the biological and applied sciences and psychology.

Suitable four year bachelor's degree programs are offered by post-secondary institutions throughout the province. The entrance requirements for bachelor's degree programs vary from one program to another and from one institution to another but, in general, specify a minimum acceptable average (ranging from 65 to 80 per cent depending on the program) in English Language Arts 30-1 or English 30 and four other specified Grade 12 subjects such as 30 level science courses, Pure Math 30 or a 30 level language other than English.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary in Alberta. Ergonomists may belong to the Association of Canadian Ergonomists and be certified through the Canadian College of Certified Professional Ergonomists. To qualify for certification, applicants must have a bachelor's degree with specified course content or an equivalent combination of education and experience, and meet competency and work experience requirements.

Employment and Advancement

Ergonomists work for:

- government departments concerned with workers compensation, occupational health and safety, transportation and defence
- research councils and institutes
- universities and other educational institutions
- computer and office furniture manufacturers
- manufacturing companies
- large corporations such as utility or telecommunications companies
- private consulting firms.

Self-employed ergonomists may contract their services to a variety of employers.

Advancement opportunities vary depending on the size and nature of the organization and the ergonomist's qualifications.

Ergonomists are part of the larger National Occupational Classification 4161: Natural and Applied Science Policy Researchers, Consultants and Program Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,600 Albertans are employed in the Natural and Applied Science Policy Researchers, Consultants and Program Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since ergonomists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for ergonomists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Natural and Applied Science Policy Researchers, Consultants, and Program Officers occupational group working part-time or full-time earned from **$17,600 to $116,200 a year.** The average salary was **$61,500 a year.**

Esthetician

Produced DECEMBER 2003

Estheticians provide facial and body treatments designed to enhance the physical appearance of their clients.

NOC Number(s): 6482.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S O**

Duties

Estheticians work with individual clients. In general, they:

- assess each client's skin condition, appearance and other characteristics
- advise clients about skin care in general and how to care for problem areas in particular
- demonstrate how to clean and care for skin properly
- provide facial and other skin treatments using specialized products and techniques (e.g. peels and masks)
- advise clients and sell skin care products.

They may also:

- advise clients about colours and types of make-up
- teach clients how to apply make-up
- clean, shape and polish fingernails and toenails
- apply artificial nails and nail art
- tint eyelashes and eyebrows
- provide specialized treatments for hands and feet
- remove body and facial hair by applying wax
- provide other specialized services such as aromatherapy, bodywrapping or airbrushing.

When not working directly with clients, estheticians:

- keep their equipment and work stations clean
- keep records of client needs/preferences and services provided
- track inventory and order supplies.

They may also be responsible for booking client appointments.

Working Conditions

Estheticians may work full-time or part-time. Saturday and evening work is often required.

Personal Characteristics

Estheticians need the following characteristics:

- a conscientious and caring attitude
- a good sense of colour
- an interest in skin care and willingness to continue learning about new products and procedures
- the desire to maintain an attractive personal appearance.

They should enjoy:

- taking a methodical approach to compiling information
- serving and assisting people
- using specialized products and techniques.

Educational Requirements

(section revised OCTOBER 2005)

There are **no standard education requirements** for estheticians but most salons and spas require their employees to have esthetics training. High school courses in art, biology, practical chemistry, anatomy, physiology and business methods are definite assets.

In Alberta, the following private vocational schools offer esthetics training programs:

- **Alberta Academy of Aesthetics** in Edmonton
- **Academy of Professional Hair Design** in Red Deer
- **Beauty Tech Esthetic School** in Edmonton
- **European Institute of Esthetics** in Edmonton
- **Eveline Charles Academy** in Edmonton
- **International Academy of Esthetics** in Sherwood Park
- **Marvel College** in Calgary, Edmonton and Red Deer
- **Sultana's Beauty Clinic and School** in Red Deer
- **Training Inc.** in Lethbridge
- **Zeneba Academy of Esthetics** in Calgary.

Program content, length, cost and admission requirements vary. However, in general, entrance requirements include a high school diploma or equivalent, and a medical certificate. For specific admission requirements and information about mature student admission policies, please check institution calendars or websites.

People interested in this occupation should discuss their training options with practicing estheticians and potential employers before enrolling in a program.

Employment and Advancement

(section revised JANUARY 2006)

Estheticians may be employed or work on a contract basis in beauty salons, cosmetology shops, spas, fitness centres or home based businesses.

Advancement opportunities in this occupation are limited. Some estheticians establish independent shops or teach in private vocational colleges. With additional training, estheticians may move into related occupations (for more information, see the Electrologist, Make-up Artist and Massage Therapist occupational profiles).

Estheticians are part of the larger National Occupational Classification 6482: Estheticians, Electrologists and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,350 Albertans are employed in the Estheticians, Electrologists and Related Occupations group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since estheticians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for estheticians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Estheticians' earnings vary considerably depending location, services offered and the person's reputation. Rates are usually set for each type of treatment so earnings vary from day to day, depending on the type and number of treatments performed each day.

Estheticians may:

- rent space in a beauty salon and keep their earnings separate from those of the salon
- be employed by a salon and paid a basic salary plus commission
- operate their own shops and pay overhead costs (rent, utilities, etc.) from their earnings
- work from their own homes.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Estheticians, Electrologists and Related Occupations group working part-time or full-time earned from **$11,100 to $45,500 a year.** The average salary was **$19,600 a year.**

Executive Housekeeper

Produced MAY 2003

Executive housekeepers manage the housekeeping and laundry departments in hotels, motels and institutions such as hospitals and schools.

NOC Number(s): 6213
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: M D s

Duties

Executive housekeepers supervise personnel who clean the establishment and may also supervise in-house laundry services, maintenance and repair services, or dry cleaning and valet services.

Duties and responsibilities vary depending on the size and nature of the organization but, in general, executive housekeepers:

- hire and train new personnel in their departments
- schedule work hours and keep employee records
- establish standards of housekeeping quality and safety, and ensure that those standards are maintained
- choose the most suitable cleaning materials for different types of linens, furniture, flooring and other surfaces
- supervise staff and do performance appraisals.

In hospitals and other health care facilities, executive housekeepers are particularly concerned with preventing the spread of infection.

Executive housekeepers may also:

- prepare and manage housekeeping department budgets
- develop in-service housekeeping training programs
- order supplies and furnishings
- maintain an inventory
- make recommendations for painting, repairs, furnishings, relocation of equipment and reallocation of space.

In smaller establishments, executive housekeepers may help housekeeping staff when required.

Working Conditions

Executive housekeepers generally work standard office hours. Other working conditions depend upon the type of institution in which they work (e.g. small nursing home or luxury hotel).

Personal Characteristics

Executive housekeepers need the following characteristics:

- good communication skills
- organizational skills
- the ability to make sound decisions quickly
- excellent leadership and supervisory skills
- a good eye for details
- the desire to do precise work.

They should enjoy taking a methodical approach to co-ordinating information, supervising the work of others and working with people.

Educational Requirements

(section revised OCTOBER 2005)

The specific qualifications required for executive housekeepers vary from one employer to another and depend on the responsibilities of the position. A second language may be an asset.

Some executive housekeepers have worked their way up from cleaning positions. However, most employers prefer to hire high school graduates who have **some related post-secondary education and experience** in administration, human resource management, housekeeping, quality control, chemistry or textiles (seamstress or tailoring skills). Training in health and safety is also required.

There are a wide variety of post-secondary education programs related to this field, ranging from continuing education and distance education courses to two year diploma programs (such as health services administration, or hotel and restaurant administration) to bachelor's degree programs in management. Anyone interested in becoming an executive housekeeper is strongly advised to contact executive housekeepers working in the type of facility that interests them to ask about preferred training.

Business administration and management programs are offered by colleges, technical institutes and universities throughout the province. The following programs are directly related to health administration or administration in the hospitality and tourism industry.

- **Athabasca University** offers by distance education a two year University Certificate in Health Development Administration program and a three year Bachelor of Health Administration degree program. Applicants must be at least 18 years of age and live in North America.
- The **Northern Alberta Institute of Technology** in Edmonton offers a one year certificate and a two year Hospitality Management diploma program. The minimum education requirement for both programs is Grade 11 including English and math.
- **Red Deer College** offers a two year Hospitality and Tourism diploma program with specializations in accounting and finance management, food and beverage management, and rooms and marketing management. The entrance requirement is a high school diploma or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Hotel and Restaurant Management diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, and Pure Math 30 or Applied Math 30 or Math 33.
- The **University of Calgary** offers a Bachelor of Hotel and Resort Management degree program that may also be taken as a co-op program. Applicants must be admitted to an approved two year diploma program such as the Hotel and Restaurant Management program at SAIT (see above) and achieve a minimum grade point average of 3.0/4 in the diploma program before they are admitted to the BHRM program. The University of Calgary also offers four year and five year co-op Bachelor of Commerce degree programs in Tourism and Hospitality Management. The entrance requirement for the B.Comm. program is a high school diploma with an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, and three other appropriate subjects.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutuions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Contact the **Alberta Hotel and Lodging Association** for information about a home/self study Executive Housekeeper certification program offered by the **Educational Institute of the American Hotel and Lodging Association** or contact the Educational Institute directly.

Alberta Tourism Education Council (ATEC) has developed a process for housekeeping attendants to demonstrate their skills and write an examination to earn a certificate recognized throughout Canada in the tourism and hospitality industry.

Employment and Advancement

(section revised JANUARY 2006)

Executive housekeepers are employed in:

- hotels
- motels
- hostels
- hospitals

- nursing homes
- educational institutions
- other private and public institutions.

Advancement prospects are limited unless the executive housekeeper has or is willing to take post-secondary education related to administration and management.

In Alberta, over 75 per cent of people employed as executive housekeepers work in the following industries:

- **Accommodation and Food Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,000 Albertans are employed in the Executive Housekeepers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary widely in this occupation depending on the position responsibilities and the executive housekeeper's education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Executive Housekeepers occupational group working part-time or full-time earned from **$15,200 to $43,900 a year.** The average salary was **$29,100 a year.**

Exhibit Designer

Produced OCTOBER 2003

Exhibit designers work with others to research, plan, design and oversee the fabrication and installation of exhibits and displays.

NOC Number(s): 5243.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

Exhibit designers may design permanent, temporary, travelling or virtual displays or exhibits for museums, historic sites, galleries, science centres, interpretive centres, trade shows or parades. Exhibits may include two or three dimensional materials such as fine art, museum artifacts (e.g. clothing, personal items, household objects, tools, machinery), natural history or archaeological specimens, or scientific models. In historic buildings, exhibits recreate period interiors. Virtual exhibits may be posted on the Internet.

When planning new displays or exhibits, the design team must consider:

- the sponsoring organization's goals, objectives and resources
- the main ideas to be conveyed and the most effective ways to present them (e.g. signage, human interaction, audio-visual presentation)
- the characteristics of typical viewers and their comfort requirements (e.g. temperature, rest areas, literacy levels)
- requirements imposed by the space surrounding the exhibit
- traffic flow through the exhibit and necessary protections for display items (e.g. security concerns, conservation requirements)
- the overall aesthetic presentation
- installation and mobility requirements
- safety issues (e.g. fire regulations, disabled access)
- evaluation criteria to measure the success of the exhibit.

The design stages are essentially the same for any type of design project. In general, exhibit designers:

- gather information about exhibit space, proposed themes and content, audiences, timelines and budget
- produce sketches of the proposed exhibit and obtain approval for the design concept
- prepare designs, computer or three-dimensional models, and detailed working drawings
- co-ordinate the work of the production team fabricating the exhibit and, when required, pitch in to help with fabrication
- work with curatorial staff to oversee the installation of exhibits
- participate in exhibit evaluations.

Exhibit designers often supervise staff, or prepare contracts and oversee the work of contractors. They may also co-ordinate or participate in the design and production of related materials such as exhibit catalogues, signs, educational materials, advertisements, publicity notices, posters, brochures or invitations to promotional events.

Working Conditions

Exhibit designers' working conditions vary depending on the type of project. They usually work indoors in offices, studios, workshops and warehouses, but also may visit outdoor sites. Overtime may be required to finish projects on time.

Personal Characteristics

Exhibit designers need the following characteristics:

- the ability to plan and create three dimensional designs
- strong interpersonal communication skills and presentation skills
- a good imagination and the ability to develop innovative designs
- the ability to deal with frequent interruptions and work with a team of people from a variety of backgrounds.

They should enjoy synthesizing information and developing new ideas, taking a methodical approach to tasks requiring precision and directing the work of others.

Educational Requirements

Individuals who do not have formal art and design training may be hired as assistant exhibit designers if they can demonstrate a strong design ability and a willingness to learn. However, employers generally prefer to hire people who have **post-secondary education in a related field such as graphic design, illustration, animation or web design**. Education or experience in fine art, industrial design, architecture, drafting, construction, lighting, costuming or props is an asset. Senior design positions require project management skills such as budgeting and supervisory skills.

Employers usually want to see a portfolio of work. Some employers, such as the Alberta Provincial Museum and Archives, require a four year diploma or equivalent experience before considering an applicant for the position of exhibit designer. For information about related post-secondary programs, see the Graphic Designer, Illustrator, Animator, Interactive Media Developer and Painter/Printmaker occupational profiles.

Employment and Advancement

(section revised JANUARY 2006)

Exhibit designers may be employed by or work on a contract basis for:

- art galleries, museums, historic sites, science centres, interpretive centres or zoos
- government departments responsible for parks, forestry, wildlife, culture, public affairs, museums or historic sites
- theatre or television productions
- architecture or design firms
- international expositions and events
- trade shows and conventions.

Designers may advance to supervisory and management positions. Some designers form their own companies.

Exhibit designers are part of the larger National Occupational Classification 5243: Theatre, Fashion, Exhibit and Other Creative Designers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since exhibit designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for exhibit designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Exhibit designers who work for private design companies may start at about **$10 per hour.** Freelance designers usually negotiate each contract separately.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group working part-time or full-time earned from **$13,100 to $106,500 a year.** The average salary was **$28,900 a year.**

Exploration Geophysicist

Produced JUNE 2004

Geophysicists use the principles of physics, mathematics and geology to study the surface and internal composition of the earth. Exploration geophysicists look for oil, natural gas, water and minerals for economic exploitation and for environmental projects.

NOC Number(s): 2113
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Geophysicists study the earth by measuring responses to different types of sound and electromagnetic energy.

- **Petroleum exploration geophysicists** study and interpret information on sediments, mineral and rock compositions and geologic structure to determine where oil and gas deposits are most likely to occur. To obtain this information, they usually collect data from seismic operations and, occasionally, from gravity, magnetic or satellite surveys.
- **Mineral exploration geophysicists** often use electrical and electromagnetic techniques to search for ore deposits.
- **Environmental geophysicists** use electrical and electronmagnetic techniques, and other techniques such such as ground penetrating radar to evaluate ground water quality. They are often responsible for all aspects of data acquisition and processing.
- **Development and production geophysicists** work closely with geologists and petroleum engineers to develop oil and gas properties and to monitor subsurface fluid distribution from the surface using seismic, microseismic, electrical and other techniques.

In the oil and gas industry, exploration geophysicists may specialize in any or all of the following areas:

- **data collection**, determining which areas to survey and the appropriate survey methods and parameters, estimating the costs of operations, making arrangements to enter the area and monitoring the activities of seismic and other crews during field operations (for more information, see the Seismic Observer occupational profile)
- **data processing,** using existing computer software or writing programs to process the data recorded during geophysical survey operations
- **data interpretation,** studying the processed geophysical data and determining the type, shape and location of rock structures underground.

Exploration geophysicists work with geologists, petroleum engineers, mining engineers and other professionals, and may be responsible for the supervision of a team of other professionals, technologists and support staff.

Working Conditions

Most petroleum exploration geophysicists work in an office environment, compiling and interpreting data collected from the field. A few work some months of the year in the field, directing the search for oil and gas deposits.

Mineral exploration and environmental geophysicists may spend a considerable amount of time in the field, sometimes in remote locations. Lifting up to 25 kilograms may be required.

Personal Characteristics

Exploration geophysicists need the following characteristics:

- an interest in geosciences, physics, math and problem solving
- the ability to analyze and synthesize data

- excellent spatial reasoning abilities
- an inquiring mind, initiative, imagination and creativity
- excellent decision-making skills
- the ability to work well in a team environment.

They should enjoy work that requires precision, developing innovative approaches and taking charge of situations.

Educational Requirements

The minimum education requirement for exploration geophysicists is a **Bachelor of Science (B.Sc.) degree in geophysics or a related science** with courses in geophysics, electronics, physics, chemistry, geology, mathematics and computer science. A master's degree may be preferred; a doctoral (PhD) degree is essential for research. Many employers provide additional training in the specialized techniques of oil and gas or mineral exploration.

In Alberta, the following institutions offer degree programs in geophysics:

- The **University of Alberta** in Edmonton offers four year general, specialization and honours B.Sc. degree programs in geophysics, and a five year co-operative program in geophysics. The entrance requirement is an overall average of at least 70 per cent in English 30, Pure Math 30, Chemistry 30, Physics 30 and one other approved Grade 12 subject (Math 31 recommended).
- The **University of Calgary** offers four year general and honours B.Sc. degree programs in geophysics. Students are admitted to the geophysics program after completing first year of the Natural Science Program in the Faculty of Science with a grade point average (GPA) of at least 2.0/4. The entrance requirement for the Natural Science Program is a high school diploma with an overall average of at least 70 per cent in English 30, Pure Math 30, Chemistry 30, and two other appropriate Grade 12 subjects (Math 31 and Physics 30 recommended).

Both universities also offer master's (M.Sc.) and doctoral (PhD) degree programs in geophysics.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Geologist or a Professional Geophysicist. You do **not** have to be registered if you work under the direct supervision of a Professional Geologist or a Professional Geophysicist and do not call yourself a Professional Geologist or Professional Geophysicist.

Employment and Advancement

(section revised JANUARY 2006)

Exploration geophysicists are employed by:

- oil and gas companies
- mining companies
- geophysical data acquisition companies
- engineering and environmental consulting companies
- data processing companies
- financial institutions
- universities
- research organizations.

Geophysicists usually start their careers in junior positions and, with ongoing training during employment, advance to more senior positions. Most job opportunities are in medium and small companies where breadth of knowledge is more important than having a particular specialization. The same is true of jobs in the geotechnical-environmental field.

Experienced geophysicists may move into private consulting or advance to management positions.

Exploration geophysicists are part of the larger National Occupational Classification 2113: Geologists, Geochemists and Geophysicists. In Alberta, most people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,350 Albertans are employed in the Geologists, Geochemists and Geophysicists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since exploration geophysicists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for exploration geophysicists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geologists, Geochemists and Geophysicists occupational group working part-time or full-time earned from **$37,900 to $159,600 a year.** The average salary was **$71,700 a year.**

Expressive Arts Therapists

Produced JANUARY 2005

Expressive arts therapists use artistic media to help clients maintain and improve their physical and mental health by recognizing and developing often-untapped inner resources.

NOC Number(s): 3144
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S I M**

Duties

Expressive arts therapists use creative, artistic approaches to treat mental and physical illnesses and disabilities. They provide a supportive environment and therapy for people who have difficulty expressing themselves due to physical, emotional or other limitations. For example, children can often approach difficult issues more easily and convey messages more clearly through artistic endeavours than they can with words.

Expressive arts therapists may use visual art, dance, drama or music, or a combination of arts.

- **Art therapists** use art in treatment, assessment and research. They provide therapeutic services for individuals and groups of people of all ages, and act as consultants for other mental health professionals.
- **Dance therapists** focus on the non-verbal aspects of behaviour by encouraging clients to use creative and expressive movement to address emotional issues and improve emotional and physical health.
- **Drama therapists** use drama, creative play, psychodrama, role play, improvisation and theatre to further clients' emotional growth and integration.
- **Music therapists** use techniques such as improvisation, guided imagery and relaxation to help people connect to themselves and others, and achieve therapeutic goals. They use sound, music and rhythm to actively or passively engage clients in the therapeutic process.

For each client or group of clients, therapists:

- assess client needs and strengths
- identify specific treatment goals and objectives
- choose an appropriate approach and develop a treatment program
- implement programs that involve music, art, drama and/or dance activities
- evaluate the program's effectiveness on an ongoing basis
- adjust programs as needed.

As members of therapeutic teams or as private practitioners, expressive arts therapists work closely with other professionals (e.g. psychiatrists, psychologists, teachers and counsellors).

Working Conditions

Expressive arts therapists generally work standard office hours in traditional placement settings but may work in private practices and work some evenings or weekends. All therapies require a specific, safe environment.

Music therapists may have to lift and carry instruments and other equipment that weighs up to 25 kilograms.

Personal Characteristics

Expressive arts therapists need the following characteristics:

- creativity
- enthusiasm
- a non-judgemental attitude
- strong communication and interpersonal skills
- flexibility and a tolerance for ambiguity

- initiative.

They should enjoy working with people, designing and implementing innovative therapy programs and employing artistic techniques.

Educational Requirements

(section revised MAY 2005)

Art, dance and drama therapists must have **a related master's degree** or an equivalent combination of education and experience. Music therapists must be well-rounded musicians who have at least a bachelor's degree in the social and behavioural sciences, counselling or psychotherapy.

In Alberta, the **Campus Alberta Graduate Program in Counselling**, a tri-university partnership of Athabasca University, the University of Calgary and the University of Lethbridge, offers a Master of Counselling degree program with a specialization in art therapy. The entrance requirement is a minimum grade point average (GPA) of 3.00/4 in the last ten full-course equivalents of a four year bachelor's degree program that includes specified courses in psychology or educational psychology and a counselling skills course, or equivalent.

Outside of Alberta, **art therapy** programs are offered by the:

- **Vancouver Art Therapy Institute** in Vancouver, British Columbia
- **British Columbia School of Art Therapy** in Victoria
- **Kutenai Art Therapy Institute** in Nelson, British Columbia
- **Toronto Art Therapy Institute** in Ontario
- **Concordia University** in Montreal, Quebec
- Centre de Ressourcement par les Arts et la Nature in Sherbrooke, Quebec.

Music therapy programs at the bachelor's degree level are offered by:

- **Acadia University** in Wolfville, Nova Scotia
- **Canadian Mennonite University** in Winnipeg, Manitoba
- **Capilano College/Open University** in North Vancouver
- **Wilfrid Laurier University** in Waterloo, Ontario (also offers a master's program)
- **University of Windsor** in Ontario
- **Université du Québec** à Montreal.

Drama therapy is offered at **Concordia University** in Montreal.

No master's degree program in **dance therapy** is offered in Canada. However, Australia's **Wesley Institute for Ministry and the Arts** offers approved dance therapy courses in Calgary each summer and periodically at Concordia University in Montreal. Students who have a master's degree in psychology or social work and who complete ten courses and a 700-hour supervised dance therapy internship are eligible for certification by the **American Dance Therapy Association**.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Expressive arts therapists work with children and adults in a variety of settings:

- rehabilitation facilities
- hospitals
- schools
- prisons and other correctional facilities
- private practice
- community mental health facilities
- senior centres and nursing homes
- day-care centres
- counselling centres and clinics.

Expressive arts therapists are part of the larger National Occupational Classification 3144: Other Professional Occupations in Therapy and Assessment. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and events affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Other Professional Occupations in Therapy and Assessment occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since expressive arts therapists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for expressive arts therapists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Therapy and Assessment occupational group working part-time or full-time earned from **$21,400 to $78,500 a year.** The average salary was **$38,700 a year.**

Incomes for expressive arts therapist who have master's degrees are generally comparable to other mental health professionals who have similar qualifications (e.g. psychologists).

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Family/Marriage Counsellor

Produced DECEMBER 2005

Family/marriage counsellors provide counselling to help families, couples and individuals resolve interpersonal difficulties, develop effective and satisfactory relationships, and build meaningful support systems.

NOC Number(s): 4153
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I d**

Duties

Family/marriage counsellors help individuals, couples and families understand and enhance relationships, resolve emotional issues from broken and impaired relationships, and improve personal well-being. They work collaboratively with clients to improve client strengths, resources and resilience, and develop clearer goals for the future.

In general, family/marriage counsellors:

- determine if factors such as family violence, addictions, substance abuse or mental health problems are contributing to family or marital problems
- ask questions that guide and direct clients' thinking and stimulate action
- assist clients in identifying feelings and behaviour
- help couples and families identify and use their existing skills and abilities
- assist clients in developing healthy communication skills
- help couples and families confront their problems in a constructive manner
- act as coach and collaborator to develop skills and strategies for dealing with family-related concerns
- conduct crisis counselling sessions, as required, to help clients deal with suicide, divorce, unemployment, bereavement and other life transitions
- consult with or refer clients to other professionals when appropriate
- maintain confidential records of clients' progress.

Working Conditions

Counsellors generally work in an office environment but also may work in residential, health care or in-home settings. They may work some evenings or weekends to accommodate client needs or work overtime when clients need immediate help. The work can be stressful, emotionally demanding and challenging.

Personal Characteristics

Family/marriage counsellors need the following characteristics:

- a genuine interest in people
- emotional maturity
- excellent written and oral communication skills
- sensitivity to cultural, religious and ethnic issues
- the ability to listen non-judgementally and comprehend with empathy and understanding
- the creative ability required to develop new programs or ways of doing things
- decision-making ability.

They should enjoy counselling people, synthesizing information and helping clients find innovative solutions to problems.

Educational Requirements

Most family/marriage counsellors have at least a **master's degree** in marriage and family therapy, social work, psychology or a related discipline. Employers also may require applicants to be registered social workers or chartered psychologists. For information about master's degree programs and certification requirements in Alberta, see the Psychologist and Social Worker occupational profiles.

In general, the entrance requirement for a master's degree program is a competitive grade point average (GPA) in the last two years of a four year bachelor's degree program at an accredited institution.

Four year social science bachelor's degree programs are offered by post-secondary institutions throughout Alberta. Entrance requirements vary depending on the program but, in general, include a high school diploma with a competitive average (ranging from 60 to 80 per cent depending on the institution and program) in English Language Arts 30-1 or English 30 and four other approved or specified Grade 12 subjects (30 level courses in social studies, sciences, math or a language other than English). Admission to Athabasca University is open to residents of Canada who are at least 16 years of age.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

In Alberta, family/marriage counsellors must be registered with a professional college. Both the Alberta College of Social Workers and the College of Alberta Psychologists require members to earn continuing education credits to maintain their registration.

Employment and Advancement

(section revised JANUARY 2006)

Family/marriage counsellors may work in:

- health care and rehabilitation clinics and hospitals
- counselling and family therapy centres
- government or private social service agencies
- private practices.

Advancement opportunities depend on the size and nature of the employing organization.

Family/marriage counsellors are part of the larger National Occupational Classification 4153: Family, Marriage and Other Related Counsellors. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,800 Albertans are employed in the Family, Marriage and Other Related Counsellors occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since family/marriage counsellors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for family/marriage counsellors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, most Albertans in the Family, Marriage and Other Related Counsellors occupational group working part-time or full-time earned from **$16,600 to $105,300 a year.** The average salary was **$30,700 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Farm Worker/Technician

Produced FEBRUARY 2005

Farm workers/technicians plant, cultivate and harvest crops, raise livestock and poultry, operate and maintain farm equipment, and maintain and repair farm buildings.

NOC Number(s): 8431
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O i**

Duties

Farm workers perform tasks such as the following on farms or ranches:

- plant, fertilize, cultivate, spray, irrigate and harvest grain, forage or specialty crops
- repair farm buildings and fences
- handle, feed and care for livestock and poultry
- milk cows
- promote and maintain animal health (e.g. keep enclosures clean, help immunize animals, watch for signs of disease or injury) and care for sick animals
- drive trucks
- operate and maintain equipment
- prepare and transport produce to market.

In addition to the above duties, ranch workers may:

- patrol grazing lands, usually on horseback or all-terrain vehicles
- herd animals
- ensure water supplies and maintain fencing
- protect herds from predators, possibly with the assistance of trained dogs
- attend animals during birthing and assist with difficult births
- assist in branding and castrating cattle
- shear sheep.

Farm machinery operators maintain and operate agricultural equipment (e.g. machines that cultivate, fertilize and seed land, and spray and harvest crops).

Working Conditions

Farm workers work long hours, particularly in the summer months, often outdoors in all kinds of weather. Although automation and mechanization have helped to make the work less tedious and physically demanding, repetitive manual labour is often required. Farm workers may routinely lift items weighing up to 25 kilograms or more.

Farm workers are not covered by labour standards, occupational health and safety, or Workers Compensation legislation in Alberta.

Personal Characteristics

Farm workers need the following characteristics:

- good health and stamina (physically fit, not allergic to grains, feeds, animals or dust)
- good co-ordination and manual dexterity
- the ability to follow instructions and work with little supervision
- a genuine interest in agriculture and willingness to learn
- a responsible, caring attitude when handling equipment, produce and animals.

Farm machinery operators also need the mechanical aptitude required to operate and maintain complex equipment.

All farm workers should enjoy having clear rules and organized methods for their work, operating and maintaining equipment, and monitoring the health of crops, livestock or poultry.

Educational Requirements

The education and training requirements for farm workers vary from one employer to another. Some employers will hire job applicants who have limited farming experience and provide comprehensive on-the-job training. Others prefer to hire applicants who already have farm experience. Advancement to supervisory and farm management positions may require related education as well as extensive farm experience.

The **Alberta Green Certificate Farm Training Program** through **Alberta Agriculture, Food and Rural Development** provides training that qualifies individuals as farm technicians, farm supervisors and farm managers. This is an apprenticeship-type program that combines practical on-farm experience and training with formal education in the form of home study courses, workshops, short courses or college agricultural courses. The Green Certificate program offers three levels of training.

1. farm technician (swine, dairy, cow calf beef, feed lot, sheep, crop and irrigated crop) requires approximately six to nine months to complete.
2. herdsman or production supervisor requires two or more years to complete.
3. farm business manager requires three or more years of training.

Applicants for the Green Certificate Farm Training Program must be at least 15 years of age and have a supportive farm trainer and job site. Trainees who are also high school students can receive high school diploma credits in an approved optional curriculum for achieving a Green Certificate.

Lakeland College in Vermilion offers a one year General Agriculture certificate program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in English Language Arts 30-2 or English 33), Pure Math 20 or Applied Math 20 (or Math 20 or 23) and one of the following: Biology 20, Chemistry 20, Physics 20 or Science 20.

A wide variety of short, specialized in-class or distance education courses related to agriculture are offered by:

- **Alberta Agriculture, Food and Rural Development**
- the **Rural Education and Development Association**
- post-secondary education institutions that offer full-time agriculture programs (for lists and links, see related profiles such as Dairy Producer, Grain and Forage Crop Producer and Livestock/Poultry Producer).

Courses range in length from one day to several weeks and provide flexibility for those who choose not to leave their farm operations for long periods of time. Courses are advertised in brochures and local newspapers.

Employment and Advancement

(section revised JANUARY 2006)

Farm workers may be permanent or part-time employees, or family members of the farm owner. Many jobs are seasonal or casual. Technological changes, decreases in family size, increases in the amount of land needed to maintain a viable business and other economic factors have created a greater need for employed farm staff.

Some people seek positions as general farm workers through direct contact and negotiations with individual farm owners. Others use the services of government offices or private recruitment and placement agencies to find employment.

Experienced farm workers, particularly those who have related education and demonstrated leadership skills, mechanical skills and business skills, may advance to supervisory and farm management positions. Farm supervisors or herdsmen, sometimes called production supervisors, oversee a specific area of a farming operation and report directly to the farmer or to farm business manager.

In Alberta, most people employed as farm workers/technicians work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 14,500 Albertans are employed in the General Farm Workers occupational group, which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Wages are usually negotiated between hired farm workers and farm employers, and vary with the type of work being done and the hours of work. For seasonal and year-round positions, accommodations may be provided on the farm for a nominal rent or as a taxable benefit.

Annual incomes in this occupation vary considerably. Often, farm workers are contracted to work for a specified period of time.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the General Farm Workers occupational group working part-time or full-time earned from **$12,200 to $42,700 a year.** The average salary was **$25,200 a year.**

© Government of Alberta, Human Resources and Employment

Farrier

Produced MAY 2005

Farriers trim horses' hooves and, when necessary, forge metal bars into custom-made horseshoes or shape commercial shoes to fit and suit a particular horse.

NOC Number(s): 7266.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M I**

Duties

Farriers care for horses' hooves and may apply horseshoes for protection, traction or therapeutic/gait correction. In general, farriers:

- trim and shape hooves
- look for any existing or developing foot problems, and work in co-operation with equine veterinarians
- remove old horseshoes or select the correct shoes, shoe size and type of shoe for the type of work done by the animal, the type of terrain and the condition of the hoof
- shape shoes (hot or cold) to fit a horse's hooves
- nail horseshoes to hooves or glue shoes on if hooves cannot accommodate nailing
- ensure that shoes fit properly
- educate horse owners about caring for horses' feet.

Shoeing a horse usually takes about an hour. Farriers must work quickly and confidently and, at the same time, reassure nervous horses and deal with troublesome ones.

Farriers also may fashion equipment such as hoof picks, fire pokes and fire shovels out of bars of steel.

Working Conditions

Most farriers drive from client to client in vehicles equipped with portable forges, anvils and the tools of their trade. They often work long hours outdoors or in stables.

The work is physically demanding, requiring constant bending and heavy lifting (over 25 kilograms). Occupational hazards include burns from working with hot metal and injuries resulting from kicks, bites, being stepped on or pushed, especially when working with unco-operative horses.

Personal Characteristics

Farriers need the following characteristics:

- physical stamina
- interest and good judgment in working with horses
- patience and perseverance
- good eyesight and co-ordination
- excellent communication skills for dealing with horse owners
- the ability to work alone
- a willingness to keep up to date through professional development activities (e.g. reading, attending clinics).

They should enjoy using tools to perform tasks requiring precision, using standard techniques and methods, and finding innovative solutions to problems (e.g. dealing with problem horses).

Educational Requirements

Farriers need a working knowledge of:

- how to get along with horses
- gaits
- general horse husbandry practices
- horse anatomy and physiology as it applies to conformation and stance
- how to shoe a horse to compensate for or correct a deficiency in conformation
- how to handle a forge and the tools of the trade.

Since most farriers are self-employed, they also must be self-motivated and have good marketing and business skills.

In Alberta, **Olds College** offers a one year Farrier Science certificate program that runs from January to December. Applicants must be at least 18 years of age, have English 20 or 23 (or equivalent) and Biology 20 or Science 20, and demonstrate knowledge of the farrier profession, horse handling and tool use. A questionnaire, references and an interview are required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check the Olds College calendar or website.

Another method of learning the skills of the farrier trade is to arrange an informal apprenticeship with an experienced farrier. The length of such a training program would depend on the person's skills and desire to learn. However, informal apprenticeships are often difficult to set up because farriers are paid for the work done, not the time required, and it takes time to train a person.

Employment and Advancement

Most farriers are self-employed. Many start out by working part-time while employed in another job and go full-time when their practice has grown sufficiently. They may work in small shops or from mobile units and travel to:

- breeding farms
- riding stables
- acreages, farms and ranches
- racetracks
- feedlots.

Farriers work year round with working and pleasure stock and with race horses but there tends to be less work in the winter months.

Experienced farriers may specialize in a particular type of horse (e.g. show horses, standardbred horses or pleasure horses). Advancement generally takes the form of building a larger clientele.

Farriers are part of the larger National Occupational Classification 7266: Blacksmiths and Die Setters. In Alberta, people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Forestry and Logging.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Very few Albertans are employed in the Blacksmiths and Die Setters occupational group.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Farriers are self-employed and must pay operating expenses from their gross earnings. Their net earnings vary considerably depending on the geographic area and the farrier's reputation and business skills.

Fashion Designer

Produced APRIL 2005

Fashion designers create new styles of clothing and accessories such as jewellery, belts, gloves and hats.

NOC Number(s): 5243.2
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

In creating new designs, fashion designers follow a fairly standard process to plan, design and construct a garment. In general, they:

- research fabric and styling trends
- identify the needs and preferences of their target market (customers)
- choose fabric swatches and make rough sketches
- transfer directly to a flat pattern or drape the fabric over a dressmaking form
- produce a flat pattern on paper to make a sample garment
- cut the fabric to the shape of the pattern
- make alterations on the sample and pattern after it is tried on by live models.

A number of samples may have to be made before a design is satisfactory. If the garment is being produced for the wholesale market:

- the pattern is cut and graded to standardized sizes
- sewing specifications are added
- the product is either manufactured in-house or contracted out to be cut, sewn and finished.

Designers supervise all phases and details of pattern preparation: cutting, fitting and garment production. They choose the fabric and trim as well.

Marketing their goods is a big part of a designer's business. This often includes:

- determining price points for styles
- duplicating their collections for agents and sales representatives who travel to other garment centres
- promoting their collections through fashion shows and personal appearances
- travelling frequently to attend trade shows to buy materials.

Designers put together a line of garments or accessories to help promote their products. As well, many recognized designers are starting to market their goods in their own boutiques or through online or mail order catalogues.

Fashion designers must keep up to date with fashion trends so their clothes are fashion forward. This means that they create original goods which are not just imitations or copies of everyone else's look. Designers who work for manufacturers may do less original work and adapt other designers' ideas for the mass market.

Haute Couture is a very specialized area of fashion design that caters to individual clients. These are original designs, usually one-of-a-kind, representing the top end of the fashion industry both in style and price. Couturiers produce a much smaller volume of clothing, usually only one sample of each design.

Working Conditions

Most fashion designers work long, irregular hours. Overtime is often required before big shows and during season rushes. Work rooms may be crowded. Designers must meet tight deadlines while maintaining a high level of quality and paying careful attention to detail.

Personal Characteristics

Fashion designers need the following characteristics:

- imagination and creative talent
- a good sense of colour
- an identifiable personal style
- excellent time management skills and a capacity for hard work and long hours
- good communication skills
- perseverance and the ability to sell ideas to others
- the ability to handle criticism
- the ability to work well with a wide variety of people
- willingness to do the reading and research required to keep informed about new materials, trims and manufacturers' practices.

They should enjoy synthesizing information and developing innovative designs, doing methodical, precise work when preparing patterns and fitting garments, and advising customers.

Educational Requirements

Fashion designers require an in-depth, working knowledge of textiles, technical clothing construction, sketching, draping, pattern-making, sewing, finishes and fitting. Experience in dealing with consumers at the retail level and computer skills are definite assets.

Designers also need an understanding of how to develop and sell a business plan to financial backers, and the skills required to operate a small business (e.g. organization, accounting, marketing).

Training programs vary considerably in content, length, entrance requirements, cost and reputation in the clothing industry. Prospective students should discuss training options with practising fashion designers before enrolling in a training program.

In Alberta, the following post-secondary institutions offer programs related to fashion design:

- **Lethbridge Community College** offers one year certificate and two year diploma programs in Fashion Design and Merchandising. The entrance requirement is a high school diploma or equivalent with Math 20 or 23, Applied Math 20 or Pure Math 20.
- **Marvel College**, a private vocational school in Edmonton, offers a 52 week Fashion Design and Apparel Production program which includes a six week practicum. The entrance requirement is a high school diploma or equivalent.
- **Northern Lakes College** in Grouard offers workshops in Aboriginal Arts and Design. All workshops are noncredit and do not have entrance requirements.
- **Olds College** offers one year certificate and two year diploma Fashion programs. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (or English 30 or 33), and Pure or Applied Math 20 (or Math 20 or 23). Production majors should have above average sewing skills.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree in Human Ecology, with a specialization in Textiles and Clothing. The entrance requirement is a high school diploma or equivalent with a minimum overall average of 70 per cent in English 30, Math 30 or Pure Math 30, Chemistry 30 or Biology 30, and two other approved Grade 12 subjects (CTS Fashion Studies recommended).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Employment and Advancement

(section revised JANUARY 2006)

The fashion design industry is centred primarily in major urban centres and is very competitive.

New designers must develop their own lines and promote their services by entering shows or organizing their own shows. Some designers cater to small specialty stores or particular product lines such as uniforms, safety and protective apparel, or leisure wear. Designers may hire an agent at a fashion market where several fashion designers are represented together. This often leads to greater exposure.

Beginning designers with manufacturing companies usually rotate through jobs such as assistant to the pattern maker, draper, sample maker, grader and dressmaker. With experience they might become design assistants. Many designers work as in-house designers for specialty stores or they freelance (produce individual designs for clients).

Fashion designers may use their skills full-time in accessory design, fashion consulting or designing uniforms for large corporations. They also may work part-time as fashion illustrators, photographers' stylists, fashion writers, fashion show commentators or costume designers.

Fashion designers are part of the larger National Occupational Classification 5243: Theatre, Fashion, Exhibit and Other Creative Designers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since fashion designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for fashion designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group working part-time or full-time earned from **$13,100 to $106,500 a year.** The average salary was **$28,900 a year.**

Famous designers earn much more.

Feed Mill Production Worker

Produced MARCH 2005

Feed mill production workers operate machines that clean, separate, crush, grind, mix, pellet and bag grains for animal and poultry feed.

NOC Number(s): 9461.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M i

Duties

Feed mill production workers may specialize in one area of the operation or they may rotate duties throughout the plant. In general, they:

- operate pellet mills, rolling and grinding equipment, mixing and blending equipment or packaging equipment
- conduct quality control checks
- maintain records of production information
- maintain and repair equipment
- handle bagged products and sales inventory in the warehouse
- operate forklifts
- load and drive trucks.

The industry is changing and production workers are being assigned more responsibility in ensuring that proper production processes are used. Many plants are being automated. In most plants, workers interact with other staff members in all parts of the operation.

Working Conditions

The work is performed primarily indoors. The working environment may be noisy and dusty. Shift work is usually required.

Lifting over 25 kilograms may be required.

Personal Characteristics

Feed mill production workers need the following characteristics:

- good health and stamina (no allergies to grain dust)
- a high degree of manual dexterity
- the ability to understand and follow oral and written instructions
- the ability to work quickly and steadily, and work with little supervision
- mechanical ability
- the ability to work as part of a team.

Feed mill production workers should enjoy operating and controlling equipment, having clear rules and organized methods for their work, and adjusting machines.

Educational Requirements

There are **no standard education requirements** for feed mill production workers. However, employers may require job applicants to have a high school diploma. Related training or experience (e.g. a farm background) and computer skills are definite assets.

Feed mill production workers are generally **trained on the job** to operate machinery in various aspects of mill operations. This may involve:

- learning and following standard operating procedures for good manufacturing practices
- maintaining records for Hazard Analysis and Critical Contol Point (HACCP) certification
- learning and following health and safety procedures
- obtaining a forklift certificate.

When there is sufficient demand for them, related short courses are offered by the continuing education divisions of post-secondary institutions that offer agricultural programs (e.g. **Lakeland College**, **Lethbridge Community College**, **Northern Alberta Institute of Technology**, **Olds College**). For current information, please check post-secondary calendars/websites and local newspapers.

Employment and Advancement

(section revised JANUARY 2006)

Employees who have no previous experience in feed mill production usually start as general plant help. After obtaining experience around the mill, they are trained to operate machinery.

In most plants, individuals who have demonstrated leadership abilities may advance to lead hand and supervisory positions. Some production workers may become feed sales representatives or move into marketing positions (if they take additional training and have a suitable personality).

Feed mill production workers are part of the larger National Occupational Classification 9461: Process Control and Machine Operators, Food and Beverage Processing. In Alberta, most people employed in this classification work in the **Food and Beverage Products Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Food and Beverage Products Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Process Control and Machine Operators, Food and Beverage Processing occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since feed mill production workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for feed mill production workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Process Control and Machine Operators, Food and Beverage Processing occupational group working part-time or full-time earned from **$11,900 to $54,000 a year.** The average salary was **$26,300 a year.**

Field Production Operator

Produced AUGUST 2005

Field production operators are responsible for the initial separation processes or the special treatment required to ensure that impurities such as water, gas and sediments are removed from oil and gas in the field. Once separated, the oil or gas is transported by pipeline to refineries, gas plants or markets.

NOC Number(s): 9232
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I d**

Duties

Depending on the company, field production operators may be responsible for the field production of oil wells or gas wells, or both. They optimize production by:

- monitoring production and running diagnostics on well performance
- maintaining flow lines
- scheduling and supervising down hole wireline dewaxing programs on flowing oil wells
- monitoring down hole pump efficiency on artificial lift wells and reporting malfunctions
- identifying failed equipment and reporting which replacement parts are needed.

Senior production operators also may:

- identify safety hazards and issue safe work permits
- supervise work crews to ensure safe operating practices and compliance with legislated and corporate requirements
- monitor environmental issues and report any incidents to regulatory bodies.

Oil field production operators are usually responsible for a number of wells (the number depending on the size of the oil field, level of automation, production systems and company operating the wells). Specific duties vary from one position to another and from one company to another. For example, some oil field production operators, called pumpers, are responsible only for checking wellhead equipment. Other oil field production operators, called battery operators, work entirely at batteries (field stations that have treatment units, water disposal units and storage units). However, in most companies, oil field production operators are responsible for wellhead equipment, batteries and satellite facilities.

If enhanced recovery methods such as carbon dioxide or water injection are used, field production operators may operate either system. In the case of steam flood operations, operators must have additional power engineering certification.

In general, oil field production operators:

- take pressure and flow readings at oil wells
- compute and record well test data
- examine equipment on the wellhead to ensure it is running properly
- inspect flow lines from the oil well
- supervise hot oilers and pressure trucks
- examine oil lines for leaks, hydrates or wax plugging
- maintain equipment and trouble-shoot problems
- isolate part of a system for inspection, repair and cleaning
- report their findings, sometimes by mobile radio
- maintain good relations with land owners.

At treatment units in batteries, they may:

- obtain samples and readings
- input data to a computer program
- conduct basic tests on different substances
- add chemicals to the unit

- maintain equipment.

At water disposal units and oil storage tanks, they usually:

- measure pressures, temperatures and flow rates
- check storage capabilities
- measure levels in the tanks
- maintain equipment.

Depending on the level of automation of the field systems and processes, field production operators may have to manually close and open or adjust valves and pressures in an area. They also have to check the gathering systems that transport any unused gas from the battery to the gas plant or other markets.

In some fields, oil field production operators also may handle maintenance. Those who work with a helper are responsible for training the helper.

Gas field production operators are responsible for a number of gas wells depending on the level of automation, the processes and systems used, the size of the gas field and the employing organization. The amount of travelling they must do depends on whether gas wells are near each other or scattered in isolated areas.

At each well, gas field production operators:

- check equipment that controls the flow and pressure of the well
- check valves, flowlines and hydrate suppression systems
- take readings of temperatures, pressures and flow rates
- take gas samples
- maintain equipment.

They also may bring on wells or shut in wells. When there are no dehydration facilities near a gas well, operators must check the heaters in the gathering system. When there are problems, they may have to:

- relight pilot lights
- check for corrosion and flowline leaks
- adjust valves that control flow from various gathering lines
- check compressors
- add corrosion inhibitors or dewpoint depression chemicals.

If dehydration facilities are near the gas well, field production operators may:

- record readings
- take samples
- conduct basic tests on the samples.

Working Conditions

Oil and gas field production operators are required to drive to a variety of work sites and may be required to lift items weighing up to 25 kilograms or more. They must be aware of potential hazards (e.g. exposure to toxic chemicals such as hydrogen sulphide) and know how to handle emergency situations.

Oil field production operators may work out of a battery or field station. They often are required to work shifts and be on call.

Gas field production operators work out of a field station or gas plant. They generally work only during the day but they may be on call 24 hours a day.

Personal Characteristics

Field production operators need the following characteristics:

- excellent oral and written communication skills
- mechanical aptitude
- analytical skills
- good eye-hand co-ordination
- excellent vision including colour vision
- good hearing
- agility, endurance and the ability to lift heavy equipment
- mathematical ability (to prepare charts and graphs)
- the ability to work with little supervision

- excellent judgement and a concern for safety.

They should enjoy controlling equipment, instruments and machinery; analyzing information to solve problems and working with others in a team.

Educational Requirements

There are **no formal educational requirements** for field production operators but employers usually prefer to hire people who have at least a high school diploma. Previous work experience with machines or electrical equipment is a definite asset.

Field production operators are trained on the job and take first aid and safety training courses (e.g. one day H2S Alive courses offered by the continuing education departments of post-secondary institutions and by organizations such as the **Alberta Safety Council** and **Enform** (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council)).

In Alberta, post-secondary institutions throughout the province offer power engineering courses that may be useful for people interested in becoming field production operators (see the Power Engineer occupational profile). **Oil** field production operators who wish to operate steam injection units used in enhanced recovery operations must have at least a Fourth Class Power Engineering Certificate. **Gas** field production operators may benefit from taking training as gas plant operators (see the Gas Plant Operator occupational profile). The following institutions offer other related post-secondary programs that are one year or less in length.

- **Enform** (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and in Nisku (near Edmonton) offers training courses. Contact Enform for information regarding course schedules and admission requirements.
- **Lakeland College** in Lloydminster offers a Gas Process Operations certificate program and a one year Heavy Oil Operations Technician certificate program. The entrance requirement for both programs is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33), and Physics 20 or Chemistry 20 (or 65 per cent in Science 20).
- The **Northern Alberta Institute of Technology (NAIT)** in Fairview offers a Gas Process Operations certificate program. The entrance requirement is at least a C in Grade 10 English and math, or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a 26 module Production Field Operations certificate program by distance education.

For information about related two year diploma programs, see the Chemical Engineering Technologist and Petroleum Engineering Technologist occupational profiles.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Field production operators are employed by companies involved in the production of oil and gas. Information on field production operator positions can usually be obtained by contacting company field offices or gas plants that are usually located in or around smaller centres in Alberta.

Inexperienced people usually start off as helpers on a contract basis or as junior field production operators. Depending on the company, there may be different categories of helpers or junior operators. After individuals have sufficient on-the-job experience and have completed additional courses from the company or other sources, they may move into the position of operator.

From field production operator positions, individuals with initiative may be able to work toward supervisory or management positions in the company. With additional technical education or training, they may become:

- gas plant operators
- petroleum process operators
- well servicing supervisors
- gaugers on a pipeline.

Field production operators are part of the larger National Occupational Classification 9232: Petroleum, Gas and Chemical Process Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,000 Albertans are employed in the Petroleum, Gas and Chemical Process Operators occupational group, which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since field production operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for field production operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Petroleum, Gas and Chemical Process Operators occupational group working part-time or full-time earned from **$35,400 to $115,000 a year.** The average salary was **$77,900 a year.**

Salaries for field production operators are generally at the low end of this range.

Film Director

Produced OCTOBER 2003

Film directors develop an artistic vision for a film production and work with others to implement that vision.

NOC Number(s): 5131.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D S

Duties

Film directors are responsible for making shows come alive on screen. They may work in genres such as dramatic feature films, television programs, documentaries, training and promotional films, or animated shorts.

Some film directors are also producers. They help find financial backing for a film project and then recruit the technical crew and actors to produce it. If the producer and director are not the same person, the producer selects a director. It is an important decision because a director's reputation for successful films encourages investment capital and the involvement of quality actors and film craftspeople such as cinematographers and production crew members.

In pre-production, directors:

- meet with producers and screenwriters to discuss shots and changes to the script
- work with the art director to create or approve storyboards
- identify needed sets, props, costumes and locations
- consult with producers about hiring crew (e.g. art director, cinematographer, costume designer, production co-ordinator)
- consult with producers and casting directors about hiring cast members, holding auditions for speaking parts and contracting larger roles to actors considered right for the part
- consult with the cinematographer about desired mood, texture, contrasts and dominant colour and plan shots
- prepare a working budget and shooting schedule.

During production, directors work closely with actors and crew members to produce the best possible outcomes. For each shot, film directors communicate the approach they want for the scene, comment on characterization, explain the blocking and perhaps run through the scene once or twice before shooting the first take.

At the end of each day of shooting, directors and producers view the rushes (the day's work on film) to check the work in progress and make changes in future shoots. Because films are shot out of sequence, directors must visualize the "through-line" of the story and judge if the work is on track.

After filming is finished, directors may collaborate with producers, film editors, composers and sound editors as the film is edited and the soundtrack added. On feature films, directors may be asked to help promote films before they are released. This may involve touring major cities and participating in media interviews, talk shows and other public appearances.

Working Conditions

Hours of work for film directors are often long and irregular. They may work indoors or outdoors in all kinds of weather. Dealing with time pressures, budget limitations and creative responsibilities can be stressful.

Personal Characteristics

Film directors need the following characteristics:

- the ability to command respect
- the ability to visualize a finished product
- the communication and interpersonal skills required to work effectively with performers, artists and technicians,

and to develop a network of supporters and contacts
- a willingness to accept artistic, psychological and emotional risks
- the ability to work long days
- good time management skills.

They should enjoy being innovative, controlling and co-ordinating the work of others, and dealing with people.

Educational Requirements

There are **no standard education requirements** for film directors but most have related post-secondary education and experience. Many are experienced actors, editors or writers. (Sometimes, they wrote the play or film they are directing.) For information about related education options, see the Actor and Creative Writer occupational profiles.

Film directors need a good understanding of visual story-telling, photography and lighting as they relate to film making. Formal training in film making should also include theory, history and hands-on experience in production.

In Alberta, the following post-secondary institutions offer programs that are directly related to film production:

- **Mount Royal College** in Calgary offers a two year Broadcasting diploma program. The entrance requirement is a high school diploma. Keyboarding skills, a portfolio, departmental testing and an interview are also required.
- The **Northern Alberta Institute of Technology** in Edmonton offers a two year Radio and Television diploma program with specializations in radio and in television. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33, and at least 50 per cent in Grade 11 math, science and social studies (Grade 12 math, science and social studies recommended). This is a quota program and competition for admission is keen. A career investigation report is required.
- **Red Deer College** offers years three and four of a Bachelor of Applied Motion Picture Arts degree program. Students completing year three are eligible for an Advanced Certificate. Entrance requirements include two years of an acceptable post-secondary program with a grade point average of at least 65 per cent (or approved experience) and an audition or interview.
- The **Southern Alberta Institute of Technology** in Calgary offers a two year Cinema, Television, Stage and Radio diploma program with specializations in broadcast news, film/video, radio and television. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33. Typing skills are essential. A resume/portfolio, research paper and an interview may be required.

During the summer months, **Banff Centre for the Arts** offers a variety of courses, workshops and residencies designed for people who already have some related education or experience. The **National Screen Institute** in Edmonton also offers training opportunities and workshops for individuals who have some professional experience in film direction, production or writing. The **Film and Video Arts Society** periodically offers courses in film directing and video directing.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Film directors are generally hired on a contract basis to direct:

- government training films or videos
- educational films or videos
- commercials
- music and other videos
- travelogues
- nature films
- documentaries
- television dramas
- feature films.

The film industry is highly competitive and films are expensive to produce so producers are reluctant to hire inexperienced directors. Many years of related experience are usually required before aspiring directors are given full responsibility for directing a film. To gain experience, they may produce projects themselves by financing them personally or through arts grants, and enter their work in film festivals to build their reputations.

Film directors are part of the larger National Occupational Classification 5131: Producers, Directors, Choreographers and

Related Occupations. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Producers, Directors, Choreographers and Related Occupations group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since film directors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for film directors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Film directors' incomes vary considerably from one director to another and from one year to another, depending on the director's reputation and the economy. Some film directors work at other jobs and finance their own projects. Directors who work on a contract basis negotiate their fees before production begins. In some cases, **Directors' Guild** guidelines may apply.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Producers, Directors, Choreographers and Related Occupations group working part-time or full-time earned from **$16,200 to $108,800 a year.** The average salary was **$46,800 a year.**

© Government of Alberta, Human Resources and Employment

Financial Analyst

Produced NOVEMBER 2005

Financial analysts collect, evaluate and apply financial, economic and statistical data to analyze and evaluate investment opportunities, or make financial decisions and recommendations.

NOC Number(s): 1112.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I d**

Duties

In general, financial analysts:

- define possible risks and potential returns from investments
- make recommendations regarding investments that will help clients reach their financial goals
- evaluate the securities of companies (which includes estimating the future earning power of each company).

In **securities firms**, financial analysts:

- study mainly public companies
- prepare reports for stockbrokers, institutional investors and retail clients
- actively market their recommendations to in-house salespeople and external clients
- work with investment bankers to attract new corporate clients.

Most analysts specialize in specific industries or segments of the market.

In **large institutions** such as banks, pension funds and governments, financial analysts may:

- monitor national and international stock and bond markets
- monitor national and international economic conditions
- follow major Canadian and international industries such as oil and gas, forestry, banking, mining and telecommunications
- conduct in-depth studies of companies or investment opportunities relevant to the requirements of their organizations.

They usually specialize in stock, bond or real estate markets. They often prepare reports for fund managers that recommend how funds ranging from millions of dollars to hundreds of millions of dollars should be invested.

Working Conditions

Financial analysts work long hours in an office environment under constant pressure to meet deadlines. The work is intense and detail oriented, and often involves working with computers and custom-designed software. Some travel may be required.

Personal Characteristics

Financial analysts need the following characteristics:

- the analytical skills required to conduct thorough, objective research and make recommendations regarding investment decisions
- the ability to present their findings effectively
- good time management skills and the ability to deal with frequent interruptions
- high ethical standards
- good communication skills.

They should enjoy taking a methodical approach to collecting information, analyzing problems and finding innovative solutions, consulting with people and directing the work of others.

Educational Requirements

Most employers require prospective analysts to have several years of relevant work experience and at least one university degree. Preference may be given to applicants who have completed a finance-related program and an industry-related program. For example, a degree in geology or petroleum engineering is an asset for analysts working in the oil and gas industry.

Most employers encourage or require their junior analysts to complete the Chartered Financial Analyst program offered through the **Association for Investment Management and Research**.

In Alberta, the following post-secondary institutions offer finance-related degree programs:

- **Athabasca University**, which has an open admissions policy, offers four year Bachelor of Commerce and Masters in Business Administration (MBA)programs via distance education.
- **Concordia University College of Alberta** in Edmonton offers a four year Bachelor of Management degree program.
- **Grande Prairie Regional College** offers a four year Bachelor of Commerce degree program in collaboration with Athabasca University. Grande Prairie Regional College provides the classroom study and the degree is granted through Athabasca University.
- **The King's University College** in Edmonton offers a four year Bachelor of Commerce degree program.
- **Lakeland College** in Vermilion offer a Bachelor of Applied Financial Services degree program. The entrance requirement is successful completion of a two year diploma in Business Administration.
- **Mount Royal College** in Calgary offers a Bachelor of Applied Financial Services degree program. The entrance requirement is successful completion of a two year diploma in Business Administration.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a Bachelor of Applied Business Administration - Finance degree program. The entrance requirement is successful completion of a two year diploma in Business Administration with specified courses and a minimum GPA of 65 per cent, 2.3, 6 or C+.
- The **University of Alberta** in Edmonton offers four year and five year (co-op) Bachelor of Commerce degree programs and MBA programs with a specialization in finance. The entrance requirement for the bachelor's degree program is a pre-professional year with specific courses.
- The **University of Calgary** Haskayne School of Business offers four year and five year (co-op) Bachelor of Commerce and MBA programs with specializations in finance.
- The **University of Lethbridge** offers a four year Bachelor of Management degree program and post-diploma programs with a specialization in finance.

One and two year university transfer programs are offered by post-secondary institutions throughout the province.

First year admission requirements for university and university transfer programs vary from one institution to another but generally include a high school diploma (or equivalent) with a competitive average of at least 60 per cent (over 70 per cent for some programs) in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30) and three other approved Grade 12 subjects.

Two year financial planning or services diploma programs are offered by the following Alberta post-secondary institutions:

- **Lakeland College** in Vermilion
- **Medicine Hat College**
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Red Deer College**.

Business administration and management programs are offered by:

- **Alliance University College** in Calgary
- **Athabasca University**
- **Canadian University College** in College Heights
- **Grande Prairie Regional College**
- **Keyano College** in Fort McMurray
- **The King's University College** in Edmonton
- **Lakeland College** in Vermilion and Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College** in Medicine Hat and Brooks
- **Mount Royal College** in Calgary
- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton and at various locations

- **Northern Lakes College** in Grouard and other locations
- **Portage College** in Lac La Biche
- **Red Deer College**
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary.

Minimum admission requirements for financial planning and business administration programs vary but generally include a high school diploma with a specified minimum average or minimum marks in particular courses (e.g. Grade 12 English).

Continuing education programs are often offered on an as needed basis.

For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Financial analysts are generally employed in the head offices of:

- securities firms
- investment banking firms
- banks
- trust companies
- governments
- insurance companies
- mutual and pension funds
- accounting firms
- investment counselling firms.

Foundations, educational institutions and, in some cases, corporations with substantial amounts of their own money to invest also may employ financial analysts.

Most financial analysts employed by investment firms work in head offices which are often located in Central Canada. Many of the analysts employed in Alberta work in energy sector head offices in Calgary. Some experienced financial analysts are self-employed and act as private consultants.

Financial analysts are part of the larger National Occupational Classification 1112: Financial and Investment Analysts. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Finance, Insurance and Real Estate**
- **Professional and Technical Services**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,350 Albertans are employed in the Financial and Investment Analysts occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since financial analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for financial analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for financial analysts vary greatly depending on the analyst's responsibilities and qualifications, and the type of employer. Bonuses for senior analysts in securities firms can increase their incomes substantially.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Financial and Investment Analysts occupational group working part-time or full-time earned from **$22,900 to $119,400 a year.** The average salary was **$61,400 a year.**

Financial Customer Service Representative

Produced OCTOBER 2005

Financial customer service representatives promote their financial institution's products and services, open and close accounts, keep records of transactions, accept payments, and receive and pay out money.

NOC Number(s): 1433
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S o**

Duties

For simplicity, financial customer service representatives are called tellers for the remainder of this profile. Duties vary from one employer to another but, in general, tellers:

- promote the institution's products and services at every possible opportunity
- handle transactions for current accounts (savings accounts, personal chequing accounts)
- sell foreign currency, traveller's cheques, money orders and drafts
- guard against loss (e.g. from fraud or impersonation)
- use machines to count the daily supply of cash.

They also may:

- process term deposits, retirement savings plan contributions, automated teller transactions, night deposits or mail deposits
- sell various financial products
- refer customers interested in more complicated or detailed products such as investments and loans to financial service representatives.

When customers wish to deposit or withdraw money, tellers enter transaction information on computer terminals which automatically confirm transactions and make the necessary entries in the customer's account record. They must make sure that cheques are valid and authentic before processing transactions.

At the end of each working day, tellers may be required to balance cash holdings to ensure against errors. When debits and credits do not balance, they must search through the day's transactions to find their mistakes.

Working Conditions

Tellers' hours vary from limited part-time to full-time; most tellers work part-time. Employment in some branches may include working evenings and Saturdays.

Tellers may be on their feet for most of the working day. The work can be stressful during busy periods.

Personal Characteristics

Tellers need the following characteristics:

- good communication skills
- the ability to consistently serve customers accurately, efficiently and courteously even when there is a long line of people waiting
- empathy (perceptive and sensitive to the feelings and attitudes of others)
- the flexibility required to work effectively in a variety of situations and adapt to new ways of doing things
- the ability to keep customer information confidential
- the ability to work effectively in a team environment.

They should enjoy having clear rules and organized methods to guide their activities, working with the public, and operating computers and other business machines.

Educational Requirements

The minimum education requirement is a high school diploma but employers generally prefer to hire applicants who have some post-secondary education. Related experience in banking, retail sales or positions with a high degree of customer contact is a definite asset. During the three to six month on-the-job training period, trainees must meet specific standards of performance to become permanent employees.

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Applied Banking and Business certificate program. The entrance requirement is a high school diploma or equivalent, including English Language Arts 30-1 or 30-2 (or English 30 or 33) and Pure or Applied Math 20 (or Math 20 or 23).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Tellers are employed by financial institutions such as chartered banks, credit unions and trust companies.

With experience, tellers can often move into other sales positions or departments. Many banks provide funds to help their employees further their education on a part-time basis, provide in-house training programs and allow employees to transfer from one branch to another to broaden their background knowledge and advance to more senior positions.

Tellers are part of the larger National Occupational Classification 1433: Customer Service Representatives - Financial Services. In Alberta, most people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 12,250 Albertans are employed in the Customer Service Representatives - Financial Services occupational group which is expected to grow 0.8 to 1.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Customer Service Representatives - Financial Services occupational group working part-time or full-time earned from **$15,500 to $121,200 a year.** The average salary was **$30,900 a year.**

Financial Planner

Produced OCTOBER 2005

Financial planners develop personal financial plans for individuals and families. They analyze clients' net worth, financial resources, lifestyle preferences and goals, and make recommendations regarding how clients can achieve their financial goals.

NOC Number(s): 1114.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

In general, financial planners:

- help clients gather information from bank account records, income tax returns, life and disability insurance records, pension plan information and wills
- help clients calculate their net worth
- help clients identify personal and financial goals and objectives
- explain and compare financial products
- make recommendations regarding how clients can achieve their financial goals and objectives
- help clients implement plans or refer them to other financial services or professionals
- build and maintain a client base by keeping current client plans up-to-date and recruiting new clients on an ongoing basis
- meet with financial product representatives
- maintain detailed client files.

Self-employed financial planners may charge fees for their services, earn commissions on the products they sell, or both.

- **Fee for service planners** base their fees on the value of the client's assets or on an hourly rate. Their recommendations may include suggestions that clients buy particular products or referrals to other professionals (accountants, lawyers, investment representatives) or institutions (e.g. lending institutions). Clients may implement financial plans themselves.
- **Commission planners** receive commissions for selling specific financial products. Their recommendations may include suggestions that clients buy particular products or referrals to other professionals or institutions.

Some financial planners also conduct seminars and workshops on:

- general financial planning
- pre-retirement planning
- estate planning
- understanding severance packages.

Financial planners also may write a column for a newspaper, or appear on television or radio shows to offer their financial suggestions.

Working Conditions

Financial planners may work alone or with others in fully equipped offices or out of their homes. Many financial planners travel to meetings at clients' homes or businesses. They may work evenings and weekends as well as regular office hours.

Personal Characteristics

Financial planners need the following characteristics:

- good listening and communication skills
- respect for client confidentiality
- the ability to understand complex financial documents such as wills, insurance policies, pension plans, financial statements and tax regulations
- entrepreneurial and business marketing skills
- a willingness to keep up to date and consider new approaches to problem-solving
- the ability to balance their clients' interests with their range of services
- confidence in their knowledge and suggestions.

They should enjoy taking a methodical approach to gathering information, analyzing information and finding innovative solutions to problems, consulting with people and directing their activities.

Educational Requirements

(section revised FEBRUARY 2006)

There are no standard education requirements in this occupation. Many financial planners have completed related courses such as the **Canadian Securities Course** and the **Canadian Investment Funds Course**.

In Alberta, financial planning programs are offered by the following post-secondary institutions:

- **Grande Prairie Regional College** offers the Canadian Securities Course.
- **Lakeland College** in Vermilion offers a two year Financial Services diploma program and a Bachelor of Applied Financial Services applied degree program. The entrance requirement for the diploma program is a high school diploma with English Language Arts 30-1 (or English 30 or 65 per cent in ELA 30-2 or English 33) and 55 per cent in Pure Math 30 (or Math 30 or 65 per cent in Applied Math 30 or Math 33). The entrance requirement for the degree program is successful completion of a two year diploma in Business Administration.
- **Medicine Hat College** offers a two year Financial Services and Planning diploma program. The entrance requirement is a high school diploma with Grade 12 English and math.
- **Mount Royal College** in Calgary offers the Canadian Investment Funds program, Canadian Securities Course (Exam Preparation), the Certified Financial Planner (FPSC) program and an exam preparation course through Continuing Education. Applicants must be at least 18 years of age. The College also offers a four year applied degree Financial Services program. The entrance requirement is a high school diploma with English Language Arts 30-1 and Pure Math 30.
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Finance diploma program, a Bachelor of Applied Business - Finance applied degree. The Bachelor degree program includes four courses required for the Certified Financial Planners designation and the Canadian Securities course. Students may apply for the Finance diploma program after completing the first year of the Business Administration program or for the Bachelor degree program after completing a related two year diploma program. The entrance requirement for the Business Administration program is a high school diploma with at least 60 per cent in English Language Arts 30-1 or 30-2 and Applied or Pure Math 30, or equivalent.
- **Red Deer College** offers a two year Financial Services diploma program. The entrance requirement is a high school diploma with an average of 60 per cent in English Language Arts 30-1 or English 30 and Pure Math 30 or Math 30 (or 65 per cent in ELA 30-2 or English 33 and Applied Math 30 or Math 33), or equivalent.
- **University of Calgary** offers a six course Certified Financial Planner program through Continuing Education and a four year Bachelor of Commerce degree in Finance. The entrance requirement for the degree program is a competitive average in English 30, Pure Math 30 and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one other five credit Grade 12 subject.
- **University of Lethbridge** offers a 10 semester course certificate, a two year post-diploma Bachelor of Management degree program and Bachelor of Management degree programs in Finance. The entrance requirement is a an average of 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), two other 30-level subjects and one approved Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Accountants, lawyers and other professionals may provide different aspects of financial planning guidance. For more information, see the appropriate occupational profiles (e.g. Accountant, Investment Advisor, Lawyer).

Other Requirements

The **Financial Planners Standards Council (FPSC)** offers the Certified Financial Planner (CFP) credential to applicants who:

- have successfully completed an accredited education program
- have two years of work experience in a position related to financial planning
- adhere to the Council's Code of Ethics
- have successfully completed the CFP Examination.

An education program may be taken by attending classes at designated universities and colleges, by distance education or via the Internet. There are no minimum admission requirements but experience in the financial industry is recommended. To maintain their standing as a CFP licensee, planners must take at least 30 hours of continuing education each year.

The **Canadian Securities Institute** offers the Financial Management Advisor (FMA) designation to applicants who have completed the Canadian Securities Course, Professional Financial Planning Course and Wealth Management Techniques Course.

Employment and Advancement

(section revised JANUARY 2006)

Some financial planners are employed by small financial planning businesses or are self-employed. Others are employed on a full-time basis or contract their services to larger firms and organizations such as:

- trust companies
- banks and other lending institutions
- stock brokerage firms
- insurance agencies
- legal firms
- accounting firms
- mutual fund companies
- private financial planning companies.

Experienced financial planners may specialize in a particular aspect of financial planning (e.g. retirement planning or wealth management) or move into supervisory or management positions in larger companies or professional associations.

Financial planners are part of the larger National Occupational Classification 1114: Other Financial Officers. In Alberta, over 75 per cent of people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,850 Albertans are employed in the Other Financial Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since financial planners form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for financial planners.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Self-employed financial planners may earn the majority of their income by charging fees for their services (preparing individual financial plans, speaking at conferences, leading seminars and workshops) or earning commissions on financial products sold.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Other Financial Officers occupational group earned **up to $145,400 a year.** The average salary was **$74,600 a year.**

© Government of Alberta, Human Resources and Employment

Firefighter

Produced MAY 2003

Firefighters provide pre-hospital care and protect the public from the dangers of fire and other hazards by controlling and extinguishing fires, rescuing people, responding to dangerous goods incidents, maintaining equipment and practicing fire prevention.

NOC Number(s): 6262
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M D**

Duties

Firefighters are trained to promote safety and respond quickly and efficiently to situations that may endanger citizens or their property (eg. fires, motor vehicle accidents, hazardous goods spills). They provide medical aid, rescue services, and property and environmental loss control services.

When there is a fire, firefighters:

- establish water supply
- lay out and connect hoses and nozzles, and direct water onto fires
- forcibly enter burning buildings
- manage and control ladders used to gain access to fires and help people to safety
- provide pre-hospital care for fire victims who may be injured or overcome by smoke or gas
- salvage property (when appropriate) during or after fire fighting operations
- inspect the site of a blaze once it has been extinguished, to make sure that no dangers still exist
- use various chemicals to combat different types of fires
- deal with any hazardous chemicals which may catch fire or spill.

When there are other types of emergencies, firefighters:

- provide rescue services and medical attention for all involved in the incident
- minimize property loss and environmental impact
- work with or write cause and determination reports for the proper authorities.

Between emergencies, firefighters:

- participate in public education and fire prevention activities
- conduct fire inspection and preplanning activities
- maintain their equipment
- maintain their skills and learn new ones.

Working Conditions

Firefighters in large centres work shifts with rotating days off. In smaller centres, they may work part-time and/or be on call.

The work is physically demanding, often involving short periods of intense physical labour, and is sometimes dangerous. Firefighters must wear heavy gear while working in environments which include smoke, high temperatures and cold termperatures. The work is also emotionally demanding because there is an element of emotional stress in most emergency situations.

Lifting over 25 kilograms is sometimes required.

Personal Characteristics

Firefighters must be:

- in top physical condition because their job requires agility, endurance and strength
- able to give and take orders and function well in a team environment.

They should enjoy working with tools, equipment and machinery, having clear rules and organized methods and talking to people about fire prevention.

Educational Requirements

(section revised AUGUST 2005)

The requirements for employment as a firefighter vary from one fire department to another. For example, minimum education requirements range from Grade 10 to a high school diploma with specified courses in physics, math and chemistry. Other requirements may include:

- at least 18 years of age
- Canadian citizenship or equivalent status
- 20/30 vision without glasses and no abnormalities in colour vision
- a valid Class 5 Alberta Motor Vehicle Operator's Licence without restrictions and the ability to acquire an Alberta Class 3 and air brake licence prior to employment
- training or experience in related technologies or trades, first aid or rescue work
- a better than average ability to get along with people
- the ability to climb great heights and withstand extreme cold and intense heat
- the ability to perform under great stress
- successful completion of accredited fire protection courses
- medical emergency training (for more information, see the Emergency Medical Responder, Emergency Medical Technologist - Ambulance and Emergency Medical Technologist - Paramedic occupational profiles).

Depending on the fire department, firefighters may take a training course varying in length from six to twelve weeks after they are employed. The minimum mark required to pass the examination at the end of the course is 70 per cent. Afterward, there is a probationary period (six months to one year) working in a fire station.

Competition for firefighter positions is keen, particularly in large urban centres. Selection procedures include aptitude tests, fitness tests, medical examinations, security and reference checks and personal interviews. Related experience or training is an asset. The following four organizations work together to offer training programs:

- **Lakeland College** in Vermilion offers a Fire Service Training program. Courses vary in length from four to 24 weeks. Applicants must be at least 18 years of age and be physically fit. Lakeland College also offers a 46-week Emergency Services Technology program. Applicants must be 18 years of age, have a valid Class 5 driver's licence with Q endorsement, a Standard First Aid Certificate and CPR Level C, and a high school diploma with English 30 (or 65 per cent in English 33). It is strongly recommended that applicants obtain the Emergency Medical Responder certificate and have some background in fire or medical participation. A resume, a physical fitness assessment, a clear criminal record check, a personal interview, an aptitude test and a First Aid/CPR knowledge test are also required.
- **Lethbridge Community College** offers a Fire Investigation and Prevention program for First Class Firefighters and members of volunteer fire departments who have equivalent certification from the Fire Commissioner (or Deputy).
- The **Southern Alberta Institute of Technology** in Calgary offers a 46-week Emergency Service Technician program. Admission requirements are the same as those for the Emergency Services program at Lakeland College.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Firefighters may be employed full-time by city fire departments or part-time in smaller centres.

Firefighters who have the necessary experience, seniority and abilities may advance to positions such as team specialist, fire chief, fire captain, fire inspector or fire safety inspector.

In Alberta, most people employed as firefighters work in the **Public Administration** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Public Administration industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,450 Albertans are employed in the Firefighters occupational group which is expected to grow 0.8 to 1.8 per cent each year from 2005 to 2019 in Alberta. It is forecasted that 10 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Firefighters occupational group working part-time or full-time earned from **$21,300 to $80,800 a year.** The average salary was **$59,700 a year.**

Salaries at the top of this range are for senior officers who have management responsibilities. All protective clothing and equipment are supplied.

© Government of Alberta, Human Resources and Employment

Fish and Wildlife Officer

Produced JANUARY 2006

Fish and wildlife officers protect, preserve and manage fish and wildlife resources.

NOC Number(s): 2224
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M S**

Duties

Duties and responsibilities vary from one position to another but, in general, fish and wildlife officers:

- patrol geographic areas to monitor the activities of hunters, anglers, trappers, commercial fishers and industry
- enforce federal and provincial laws, regulations, rules and orders relating to fish and wildlife resources
- provide information and answer questions from hunters, anglers, trappers, commercial fishers, landowners, students, industry and the media
- investigate complaints, apprehend violators, prepare administrative and court documents, issue summonses and warnings, and prepare and present evidence in court
- investigate complaints about nuisance and problem wildlife, take appropriate control measures and advise landowners and industry about effective wildlife control measures they can implement on their own
- deliver public service programs such as presentations in schools and at sport club meetings
- co-operate with wildlife researchers and collect related data (for example, conduct wildlife inventories or collect samples to assist with natural resource research)
- maintain government issue equipment
- recommend changes or amendments to legislation and regulations, and hunting/fishing seasons and methods of harvest
- issue licenses and permits, or provide information to licensing agents
- inspect commercial operations (taxidermy shops, furriers, tanners, outfitters/guides, game bird farms).

Fish and wildlife officers work closely with other agencies, non-governmental organizations and delegated administrative authorities operating on the same landbase in the province. On occasion, they may be called upon to assist other local law enforcement agencies.

Working Conditions

Fish and wildlife officers work in a wide variety of environments outdoors and indoors. Travel is required, sometimes by unusual modes of transport such as canoe, snowmobile or horseback. Most officers live and work in rural communities; some work in wilderness areas that have few modern conveniences. Lifting items weighing up to 10 kilograms is routinely required.

Hours of work include weekends and holidays, and may include night shifts or split shifts. Overtime may be required to respond to violations or events involving serious conflict between humans and wildlife.

Personal Characteristics

Fish and wildlife officers need the following characteristics:

- an interest in nature and genuine concern for the environment
- good health and physical conditioning
- the ability to handle periods of isolation
- strong oral and written communication skills
- tact, diplomacy and the ability to deal effectively with difficult people and situations

- excellent problem solving skills.

They should enjoy conducting patrols, compiling information, gathering data and samples, and working with people.

Educational Requirements

The minimum education requirement for fish and wildlife officers is a two year resource management diploma plus a one year conservation law certificate. Preference is given to candidates who have a four year applied degree in conservation enforcement. Applicants also must have the following qualifications:

- at least eight to twelve months of directly related experience
- a valid driver's license
- a clean criminal record.

Computer skills are a definite asset.

After job applications have been screened, there are three more stages in the candidate selection process:

- a personal interview
- an in-depth background or reference check
- comprehensive vision, hearing, medical and psychological evaluations.

Successful candidates receive 20 weeks of in-house training.

In Alberta, the following post-secondary institutions offer conservation enforcement programs.

- **Lakeland College** in Vermilion offers a two year Environmental Protection Technology diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 (or English 30, or 65 per cent in ELA 30-2 or English 33), Chemistry 30, Biology 30 and Pure Math 30 (or Math 30, or 65 per cent in Applied Math 30 or Math 33).
- **Lethbridge Community College** offers a four year Bachelor of Applied Conservation Enforcement degree program. The entrance requirement is a high school diploma with a 60 per cent average in English Language Arts 30-1 (or English 30), Pure or Applied Math 30, Biology 30, Chemistry 20 and Social Studies 30. Medicine Hat College also offers the first year of this program.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

In Alberta, fish and wildlife officers are employed by **Alberta Sustainable Resource Development**. They may be posted to any of 61 districts in the province and are usually transferred at least once during their first years of employment.

After three years of employment, fish and wildlife officers may advance to district fish and wildlife officer positions. District officers are in charge of an assigned district and operate independently.

Fish and wildlife officers are part of the larger National Occupational Classification 2224: Conservation and Fishery Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Forestry and Logging**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Conservation and Fishery Officers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since fish and wildlife officers officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for fish and wildlife officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conservation and Fishery Officers occupational group working part-time or full-time earned from **$35,900 to $55,700 a year.** The average salary was **$51,400 a year.**

Fitness Instructor

Produced MARCH 2005

Fitness instructors promote exercise as a healthy lifestyle choice and teach students, privately or in groups, strengthening, endurance, aerobic, flexibility or weight training exercises.

NOC Number(s): 5254
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M S i**

Duties

Duties vary depending on the type of exercises fitness instructors teach but, in general, instructors:

- evaluate students' abilities and needs
- determine suitable training programs
- demonstrate correct exercise methods and proper use of exercise equipment
- ensure students exercise safely
- teach proper breathing techniques
- lead students through exercise routines
- monitor students' progress and adapt programs as needed
- provide resources to students regarding nutrition, weight control and lifestyle issues
- develop programs for people who have special requirements.

Fitness instructors who teach group classes also:

- plan routines and choose appropriate music
- choose different movements for each set of muscles depending on participants' capabilities and limitations
- help participants gauge their levels of exertion to get the maximum benefit from their exercise routines
- offer alternatives during classes to accommodate different levels of fitness.

Fitness instructors who work for health clubs may have additional responsibilities such as:

- recording member information
- promoting the club through membership sales
- teaching and demonstrating the use of equipment such as weights and mechanical exercise equipment
- maintaining equipment
- advising clients about proper clothing and shoes.

Working Conditions

Fitness instructors may work in a variety of surroundings. Clubs usually have separate showers and lockers for instructors, mirror-lined walls and special flooring designed to reduce injuries such as shin splints. These amenities may not be available in community facilities. Appropriate footwear, equipment and clothing can be expensive but in some settings clean, comfortable, casual clothing is acceptable.

The work is physically and mentally demanding. Fitness instructors are constantly moving while coaching and giving instructions out loud. They are responsible for the safety of the class and must ensure that all participants are performing the exercises correctly to prevent injury.

Noon hour, evening and weekend work is common. Fitness instructors spend a considerable amount of their own time preparing for classes.

Personal Characteristics

Fitness instructors need the following characteristics:

- physically fit and well co-ordinated
- patient, approachable and enthusiastic
- excellent oral communication skills
- good sense of rhythm
- able to motivate students
- able to work with a minimum of supervision.

They should enjoy having clear rules and organized methods, dealing with people and designing new programs.

Educational Requirements

Most employers prefer to hire fitness instructors who have a high school diploma and, although not required by law, certification from the Alberta Fitness Leadership Certification Association (AFLCA). Some employers require employees to have related post-secondary education as well.

To qualify for AFLCA certification, fitness instructors must:

- successfully complete a Fitness Theory course (minimum of 16 hours)
- successfully complete specialty training in an area such as group exercise, aquatic exercise, resistence training or fitness for older adults (minimum 16 hours)
- hold current certification in cardiopulmonary resuscitation (CPR)
- complete seven hours of practical teaching
- complete a practical observation by an AFLCA certified trainer.

Fitness Theory training and specialty courses are offered by a variety of agencies throughout the province. They may be offered by:

- the AFLCA
- the continuing education departments of post-secondary institutions
- YMCAs and YWCAs
- clubs.

CPR training is also available from:

- the continuing education departments of post-secondary institutions
- the Red Cross
- St. John's Ambulance
- recreational facilities.

To ensure that fitness instructors keep their skills and knowledge up to date, recertification is required every two years.

Some employers (e.g. YMCAs and YWCAs) provide their own in-house training and certification. Those holding YMCA/YWCA national certification can challenge AFLCA exams.

In Alberta, the following post-secondary institutions offers programs directly related to fitness training:

- **Grande Prairie Regional College** offers one year certificate and two year diploma programs in Fitness Leadership. The entrance requirement is an average of 60 per cent in English Language Arts 30-1, two humanities or science subjects, one science and one other 30 level subject. Applicants also must submit a letter of intent and have completed the AFLCA Fitness Theory course.
- **Mount Royal College** in Calgary offers a Personal Fitness Trainer certificate program that may be taken full-time (10 months) or part-time (minimum two years) by distance education. The program includes 13 courses and a 100 hour practicum. Applicants must have a high school diploma (or equivalent) including Biology 30.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Personal Fitness Trainer diploma program. The entrance requirement is a high school diploma with English 30 or 33, a 30 level science (Biology 30 preferred) and Math 20 or 23 (or Pure or Applied Math 20).
- The **Professional Institute of Massage and Fitness**, a private vocational school in Calgary, offers a 22-week Personal Fitness Trainer program. The entrance requirement is a high school diploma or equivalent with a Grade 12 biology course. A medical examination is required.
- **Red Deer College** offers an two year Kinesiology and Sports Studies diploma program with a specialization in fitness and health promotion. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1 and four other approved 30 level subjects (Biology 30 recommended). Only one language other than English will be accepted.

For information about related degree programs, see the Kinesiologist and Recreation Co-ordinator/Supervisor occupational profiles. The AFLCA requires its fitness trainers (the people who train fitness instructors) to have a degree with fitness-related courses.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Fitness instructors are employed by:

- private health clubs
- public gymnasiums
- retirement centres
- dance schools
- municipal recreation centres
- YMCAs and YWCAs
- community leagues
- large corporations
- resorts and hotels.

Many fitness instructors are employed on a contract basis for a specific class or number of classes. They may work for several employers at the same time.

Some fitness instructors teach as a second job to earn extra income or to maintain their own fitness. Some fitness instructors volunteer their services to community groups.

Fitness instructors employed by clubs may move into supervisory and management positions responsible for organizing classes. Some fitness instructors set up their own businesses.

Fitness instructors are part of the larger National Occupational Classification 5254: Program Leaders and Instructors in Recreation and Sport. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,400 Albertans are employed in the Program Leaders and Instructors in Recreation and Sport occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since fitness instructors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for fitness instructors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Fitness instructors' incomes vary greatly depending on their experience, the number of classes they teach, and the type of employer. Some fitness instructors are volunteers.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Program Leaders and Instructors in Recreation and Sport occupational group working part-time or full-time earned from **$9,800 to $61,400 a year.** The average salary was **$26,000 a year.**

Flight Attendant

Produced OCTOBER 2003

Flight attendants are responsible for the on-board safety of airline passengers and crew members. They assist passengers and other crew members in emergency situations and offer a variety of services to passengers to make a trip as pleasant as possible.

NOC Number(s): 6432.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S o**

Duties

Prior to take-off, flight attendants:

- ensure all emergency and safety equipment (fire extinguishers, oxygen bottle, first aid kits, etc.) is on board and functioning properly
- check the general condition of the aircraft cabin and ensure all the necessary supplies are on board
- meet with the captain for a briefing on flight conditions such as anticipated weather and planned altitudes
- check the number of passengers booked for the flight and find out if there are any passengers who need special help
- greet arriving passengers, check boarding passes and excessive carry-on baggage
- help passengers find their seats and ensure carry-on luggage is securely stowed
- do a passenger head count and advise the captain
- provide information about emergency exists and demonstrate safety features
- close entry door(s)
- ensure seat belts are properly fastened, no-smoking regulations are observed, table trays and chair backs are in an upright position and no passengers are wearing head sets
- secure latches in the galley, ensure lavatories are not occupied and advise the captain that the cabin is not occupied
- take designated seats for take off and review emergency procedures.

After take-off, flight attendants provide a variety of services to make the flight enjoyable for passengers. Types of service depend on flight duration, weather conditions, time of day and number of flight attendants. They may:

- distribute reading material and headphones
- offer beverages and snacks from a tray or trolley (or serve meals on longer flights)
- answer questions about the flight
- make announcements (e.g. regarding turbulence, descent preparations)
- provide services for the safety and comfort of the passengers (e.g. check seat-belts during turbulence)
- prepare aircraft and passengers for landing (e.g. stow galley equipment).

After passengers have left the aircraft, flight attendants tidy the cabin and check for articles left behind.

The lead flight attendant, sometimes called the purser or in-charge, is usually required to submit flight paper work. Flight attendants often spend up to half of their working hours preparing the cabin for flight, writing reports and doing other related work on the ground.

Working Conditions

Flight attendants work in a cramped, noisy working environment and their work can be physically demanding. They spend most of a flight on their feet, move heavy galley equipment, and routinely lift items weighing up to 25 kilograms. They cannot work if they are congested due to the risk of damage to their ear drums. They are sometimes exposed to dangerous situations.

Hours of work are irregular and duty time can be long, up to fourteen hours. Flight attendants who work for large carriers may be away from their homes a considerable amount of time, depending on airline routes. They may experience short layover times and jet lag from time zone adjustments.

Personal Characteristics

Airlines look for job candidates who have the following characteristics:

- poised and well-groomed
- tactful
- energetic
- adaptable and resourceful
- safety conscious
- able to deal comfortably with the public.

Successful flight attendants enjoy having clear guidelines for their work, helping people and handling equipment.

Educational Requirements

(section revised FEBRUARY 2005)

While the specific hiring requirements for flight attendants vary from one airline to another, certain basic requirements are common. In general, to be employed by airlines based in Canada, flight attendants must:

- be Canadian citizens or have landed immigrant status
- be in good physical health, which includes passing a medical and eyesight examination
- have a **high school diploma** or equivalent education
- have previous full-time experience in a job involving public contact and/or have post-secondary education
- be fluent in English (some airlines also require fluency in French)
- be willing to relocate to any of the airline's bases.

A second language is a definite asset.

Canadian Tourism College, a private vocational school in Vancouver, offers a 60-hour Initial Flight Attendant Training program by distance delivery.

Airlines provide four to eight weeks of training specific to their operations. After successfully completing this training, flight attendants are assigned to one of the airline's bases.

Employment and Advancement

(section revised JANUARY 2006)

In some airlines, newly hired flight attendants who have successfully completed their flight attendant training are assigned a monthly schedule. In other airlines, new flight attendants are placed in casual positions or are put on "reserve assignment" duty. This means they are on call 24 hours a day by telephone (although they have 12 or more days free of duty each month).

As flight attendants gain seniority, they are awarded a monthly schedule where all flying is known in advance. Monthly schedules, vacations and choice of home base are determined on the basis of seniority.

Flight attendants may advance to supervisory positions such as purser (in-flight supervisor), passenger or flight service director, or training instructor. Competition for advancement to senior positions is keen.

Flight attendants are part of the larger National Occupational Classification 6432: Pursers and Flight Attendants. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,550 Albertans are employed in the Pursers and Flight Attendants occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since flight attendants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for flight attendants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Trainees are paid a small training salary as well as accommodation expenses if they are from out of town.

Wage rates increase as flight attendants gain experience. Attendants on overseas flights are paid more than those on domestic flights and large carriers generally pay more than regional and charter carriers. Some flight attendants work part-time in other occupations to supplement their incomes.

Accommodation and expenses during stops away from home base are usually paid but not all airlines pay their flight attendants for non-flying time. Flight attendants are usually eligible for reduced company rates for personal travel.

© Government of Alberta, Human Resources and Employment

Flight Service Specialist

Produced OCTOBER 2005

Flight service specialists provide information for pilots that is relevant to the safe completion of their flights.

NOC Number(s): 2272.3
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Duties and responsibilities vary depending on where flight service specialists are stationed but, in general, they:

- provide preflight information about current and forecast weather conditions, radio frequencies, terrain, suggested routes, airports and related information to help pilots prepare flight plans
- check the completeness and accuracy of flight plans
- provide information about weather conditions, wind speed and direction, and local air traffic for pilots who are preparing for takeoff or landing
- support air traffic control operations by relaying radio requests for flight clearances, arrival and departure information, and position reports
- alert airport emergency services when appropriate and initiate communication searches when aircraft are overdue
- observe, record and report weather conditions at airports.

At airports that have an air traffic control tower, air traffic controllers control airport vehicle traffic on taxiways and runways, and flight information specialists generally do pre-flight and weather briefing. In airports that do not have a tower, flight service specialists provide airport advisory services.

Working Conditions

Flight service specialists normally work rotating shifts so their days off don't necessarily fall on the weekend. They work day, afternoon and night shifts. The work can be hectic and stressful.

Personal Characteristics

Flight service specialists need the following characteristics:

- maturity, emotional stability and strong decision-making skills
- the ability to deal with detailed information quickly and accurately
- the ability to convert two dimensional data into three dimensional visualizations.

They should enjoy operating radio and related equipment, communicating with pilots, and having clear rules and organized methods for co-ordinating information and taking charge of situations.

Educational Requirements

To be employed by NAV Canada, flight service specialists must:

- be a Canadian citizen or landed immigrant
- be at least 18 years of age
- have successfully completed Grade 12 or equivalent education
- pass a basic aptitude exam and interview
- qualify for security clearance
- pass a civil aviation medical exam
- have good hearing and vision (including colour perception)

- have good oral communication skills (diction, enunciation, voice projection) and a command of the English language for positions outside of Quebec. Knowledge of both English and French is essential for positions in Quebec and Ottawa.

Recommended high school courses include mathematics (algebra and trigonometry) and physics. Experience talking to groups or over microphones, and extra-curricular activities that involve talking to groups or over microphones, or require some knowledge of radio-telephone operation, air regulations and aeronautics are definite assets.

After candidates are accepted into the Flight Service Specialist training program, they are enrolled in the **NAV Canada** Training Institute in Cornwall, Ontario, for eight or nine months. Entrance and training standards are very high; not all candidates successfully complete the training.

Employment and Advancement

(section revised JANUARY 2006)

Flight service specialists are employed by NAV Canada. Application forms and information are available on the **NAV Canada website** or by calling 1-877-389-9934.

After their training, flight service specialists may be assigned to any airport in Canada that has a flight service station or a flight information centre. Advancement generally takes the form of moving to more desirable locations.

Flight service specialists are part of the larger National Occupational Classification 2272: Air Traffic Control and Related Occupations. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 800 Albertans are employed in the Air Traffic Control and Related Occupations group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since flight service specialists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for flight service specialists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for flight service specialists range from about **$43,200 to $58,500 a year.** Trainees earn about **$25,700 a year (2005 figures)**. For current salary figures, see the NAV Canada website.

Floorcovering Installer

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Floorcovering installers install, repair and replace resilient floorcovering materials such as underlay, carpet, sheet goods (e.g. vinyl) and resilient tile in commercial, residential and industrial buildings.

NOC Number(s): 7295
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Duties vary from one position to another but, in general, floorcovering installers:

- inspect and prepare subfloors for covering
- determine where to place any necessary seams or joints
- estimate the quantity of material required
- measure and cut floorcovering materials to fit around permanent obstructions
- lay and tack down or glue a foam or rubber pad over floors to be carpeted
- sew carpet seams together or use special heat tape to join carpet pieces
- stretch carpet and fasten it with a tackless strip around the perimeter of the room or by gluing it to the floor
- install sheet goods and resilient tile by applying adhesive to the subfloor, laying the covering and rolling it with a roller
- match and insert pieces of material in damaged areas
- remove or replace baseboard moulding as required
- cover stairs with vinyl nosing or carpet.

Floorcovering installers may also install wall coverings made of carpet or vinyl.

Working Conditions

Floorcovering installers work indoors. They work a 40-hour, five-day week with some overtime required to meet construction deadlines. Renewing or decorating premises already in use may require working at night. There is some risk of knee injury due to kneeling and back injury from twisting and lifting heavy materials.

Floorcovering installers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Floorcovering installers need the following characteristics:

- physical strength and stamina
- good colour vision to match colours
- good customer service skills
- the ability to get along with others.

They should enjoy working with their hands and performing tasks with little direction or supervision.

Educational Requirements

To work in Alberta, floorcovering installers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen

- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,390 hours of on-the-job training and seven weeks of technical training in the first year, a minimum of 1,420 hours of on-the-job training and six weeks of technical training in the second and a minimum of 1,600 hours of on-the-job training in the third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Apprentices are required to provide their own tools.

Applicants who have related training or work experience may be eligible for credit or certification.

Floorcovering installer apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Floorcovering installers are employed by floorcovering retail outlets, contractors and installation companies.

Experienced floorcovering installers may advance to supervisory positions, move into sales or customer relations, contract out their services or set up their own retail businesses. Alberta certified journeyman floorcovering installers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as floorcovering installers in this group work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,550 Albertans are employed in the Floor Covering Installers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice floorcovering installers will earn at least minimum wage. Usually the pay increases as the training progresses. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$14 to $28 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Floor Covering Installers occupational group working part-time or full-time earned from **$15,200 to $86,600 a year.** The average salary was **$65,300 a year.**

Floral Designer

Produced OCTOBER 2003

Floral designers create floral arrangements and purchase, sell and care for flowers and potted plants in retail flower shops.

NOC Number(s): 6421
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Floral designers may use fresh, dried or artificial flowers to create flower arrangements. They create flower arrangements for home decor and special occasions such as weddings, funerals, graduations and banquets. They may work from:

- pre-defined menus of advertised arrangements
- written orders that indicate customers' specific preferences for style, colour, type of flower and cost
- requests based only on selling price (the designer chooses the colour, design and type of flower).

In addition to designing and arranging, floral designers may also:

- cut and condition flowers and foliage for storage to ensure they remain fresh as long as possible
- create in-store and window displays
- serve customers and provide expert advice on the care and maintenance of flowering and foliage plants as well as fresh cut flowers
- sell giftware items
- order flowers and supplies from wholesalers and growers
- serve customers over the phone and manage orders via the Internet
- create designs for sale at the wholesale level
- create trend designs and looks to enhance the shop's image
- perform general cleaning duties in the store (e.g. dust and clean merchandise, wash flower buckets, sweep floors).

Working Conditions

Working conditions in floral shops are generally pleasant. The job involves considerable standing and requires lifting items weighing up to 25 kilograms.

Working hours are standard retail hours, including some evening and weekend work. Long hours may be required to complete arrangements on time during holiday seasons and for special occasions. Part-time work is common.

Personal Characteristics

Floral designers need the following characteristics:

- manual dexterity
- no pollen allergies
- a good sense of colour
- an artistic sense of design
- excellent communication skills
- tact in dealing with customers.

They should enjoy having clear rules and organized methods for their work, selling merchandise and handling flowers.

Educational Requirements

There is **no standard minimum education** requirement to become a floral designer. However, formal education and knowledge of floral design is a definite advantage when seeking employment. Basic math skills are a necessity.

Floral designers develop the speed, efficiency and good workmanship required to create floral arrangements of high quality by **taking related education programs or learning on the job.**

Flowers Canada offers a National Accreditation program. Candidates may elect to pursue certification as a Canadian Accredited Floral Designer or a Canadian Accredited Floral Manager. Each of these certification programs consist of three stages, with the first stage being common to both. Individuals who obtain certification in each program (Design and Management) are then awarded trade-marked certification Canadian Accredited Master Florist. Examinations and instructional workshops are offered across Canada periodically.

Mount Royal College in Calgary offers a three course Floral Design program through Continuing Education and Extension. Applicants must be at least 18 years of age.

Olds College offers a full-time, one year Commercial Floristry certificate program that includes a four week practicum. The entrance requirement is a high school diploma or equivalent with Biology 20 and Math 20 or 23.

Continuing education programs are often offered on an as needed basis.

For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Floral designers must continue to update their skills and knowledge by attending workshops and design shows, and reading trade publications.

Floral designers who own retail shops need business management skills for:

- hiring, training and supervising staff
- marketing (advertising, sales, promotions, window and in-store displays)
- ordering stock, bookkeeping and basic accounting.

Employment and Advancement

(section revised JANUARY 2006)

Floral designers may be self-employed, or employed full-time or part-time by independent florist shops or retail chain stores. They often start as labourers or assistants, unpacking, cutting and preparing flowers for storage, delivering orders and doing clean-up work. They usually work closely with an experienced floral designer, learning basic arrangements, then advance to more elaborate designs. In some shops, individuals may be employed exclusively as designers.

Advancement generally depends on the person's ability, creativity and ambition. Experienced floral designers who have business and supervisory skills may advance to shop manager positions or establish their own retail shops.

Floral designers are part of the much larger National Occupational Classification 6421: Retail Salespersons and Sales Clerks. In Alberta, most people employed in this classification work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 62,550 Albertans are employed in the Retail Salespersons and Sales Clerks occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since floral designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for floral designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for trainees often start at or just above **minimum wage**. Hourly wages for experienced designers vary considerably. Department store and supermarket employees working in floral departments are paid according to union rates.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sales Retail Salespersons and Sales Clerks occupational group working part-time or full-time earned from **$10,400 to $154,800 a year.** The average salary was **$25,900 a year.**

© Government of Alberta, Human Resources and Employment

Food and Beverage Server

Produced MARCH 2003

Food and beverage servers accept and serve customers' food and beverage orders in restaurants and bars.

NOC Number(s): 6453
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S o**

Duties

Food and beverage servers' duties vary considerably from one type of establishment to another. In fast food outlets, they often work behind counters, using computerized systems to take orders and tabulate bills. In coffee shops and cocktail lounges, they provide quick and efficient service for customers seated at tables. In formal dining establishments, they carefully observe established rules of service and etiquette, and pace the meal according to customer preference. In general, however, food and beverage servers:

- prepare tables or counters for meals
- stock the service area with supplies (e.g. coffee, glassware)
- greet customers, present menus and/or help customers to select menu items
- inform customers about daily specials
- record orders and place them with the kitchen and bar
- pick up and serve orders
- check that customers are enjoying their meals and correct any problems
- suggest and serve desserts and beverages
- clean and re-set tables
- tabulate and present bills for payment.

Working Conditions

Working conditions for food and beverage servers vary from one type of food and beverage establishment to another. They may be required to lift items weighing up to 10 kilograms.

Shift work and split shifts built around normal meal times are common in the food service industry. At busy times, food and beverage servers are constantly on their feet and under pressure to serve customers quickly. They take their own meal breaks between busy meal serving times.

Personal Characteristics

Food and beverage servers need the following characteristics:

- the ability to serve customers cheerfully, courteously and efficiently
- good organization and multi-tasking skills
- good health
- good grooming
- the ability to work as part of a team
- the ability to work with little supervision
- good verbal communication skills and sensitivity to customer needs
- the ability to work calmly under pressure.

Other requirements depend on the environment in which the server works. For example, serving in a coffee shop or cocktail lounge requires the ability to remember many orders and move very quickly.

Food and beverage servers should enjoy having clear rules and organized methods, working with people, and working with tools and equipment.

Educational Requirements

There are **no standard education or training requirements** for food and beverage servers. However, server intervention training such as the "It's Good Business" course offered by the **Alberta Hotel and Lodging Association**, food safety training and food allergy training are definite assets when looking for employment.

Many food and beverage servers start as food service helpers or kitchen helpers and develop the necessary skills and knowledge by observing more experienced workers and taking short courses (e.g. server intervension, food safety). Some employers use self-instructional programs to teach new employees food preparation and service skills.

Food and beverage servers who serve liquor must be at least 18 years of age and have a working knowledge of Alberta Gaming and Liquor Commission regulations concerning the service of alcohol.

In formal dining rooms, food and beverage servers must:

- know proper food service etiquette
- use the correct terminology and be able to answer questions about wines and other beverages
- be able to prepare tableside dishes (e.g. flambe) at the customer's table, if required.

The **Alberta Tourism Education Council (ATEC)** has developed a process for food and beverage servers and wine servers to receive certification that is recognized throughout the tourism and hospitality industry in Canada.

In Alberta, the following institutions offer related programs:

- **Bow Valley College** in Calary offers a one year Food Service Worker, Level I program. The entrance requirement is a Grade 10 reading level and employment in a food service area or access to a commercial or institutional kitchen or dietary department.
- **Grant MacEwan College** in Edmonton offers a Tourism-Hospitality program that includes 22 weeks of classroom training and 10 weeks of work experience. Entrance requirements include English 10 or 13 and Math 10 and 13 and a professional, conservative appearance.

Continuing education programs are often offered on an as needed basis.

For more information about programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Food and beverage servers are employed in restaurants, coffee shops, bars, clubs, hotels and other retail eating and drinking establishments. There are more part-time positions in this occupation than there are in most other occupations, and the majority of food and beverage servers are young.

Food and beverage servers can move to better paying jobs in larger and more formal food establishments. They may also advance to lead hand positions (e.g. captain or head waiter/waitress, maitre d' hotel) or other supervisory positions. Although some larger organizations provide management training programs or less formal training on the job for dependable workers who have leadership ability, related post-secondary education and ATEC certification are definite assets for advancement.

In Alberta, most people employed as food and beverage servers in this group work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 22,800 Albertans are employed in the Food and Beverage Servers occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 480 **new** positions will be created each year **in addition** to job openings created by employment turnover.

There is a relatively high employment turnover rate (particularly in lower-priced restaurants) so job openings occur quite frequently. Competition is keen, however, for positions that offer the opportunity to earn more money in tips.

Salary

(section revised OCTOBER 2005)

Food and beverage servers are often paid just above minimum wage **plus tips**. The seasonal nature of the hospitality industry greatly affects earnings from tips (earnings are generally greater during peak periods such as summer or holiday seasons than they are in January and February). In many restaurants, food and beverage servers contribute a portion of their tips to a tip pool which is distributed among all food and beverage service workers, including food service helpers, hosts/hostesses and bartenders.

Servers who provide superior customer service, particularly in restaurants where meal prices are higher, generally earn most of their income from tips.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Food and Beverage Servers occupational group working part-time or full-time earned from **$9,200 to $39,000 a year.** The average salary was **$11,100 a year.**

Tips may add considerably to food and beverage servers' incomes.

Food and Beverage Service Supervisor In Formal Dining Rooms

Produced MARCH 2003

Food and beverage service supervisors co-ordinate and supervise food and beverage service in formal restaurants and dining rooms.

NOC Number(s): 6212
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

Job titles and responsibilities in this occupation vary from one eating establishment to another. The following descriptions outline the usual responsibilities for supervisors in formal dining establishments.

Captain waiter/waitress is the title sometimes used for the head food and beverage server in a section of a formal dining room. In general, captains have the following duties and responsibilities:

- train and lead teams of food and beverage servers
- keep their sections neat and attractive
- ensure that the food and beverage service workers in their sections are well groomed, properly attired and efficient
- check table settings
- co-ordinate service so food is served at the proper time and temperature
- greet guests and present menus and wine lists.

Captains may also:

- serve wine and liquor
- carve meat and prepare flambe dishes at customers' tables
- present bills and accept payments.

Captains generally remain in the dining room taking care of guests and supervising servers who pass orders to the kitchen and serve food. They may, however, assist food and beverage servers in their sections as required.

Maitres d'hotel is the proper name for the supervisors commonly called maitre d's. Maitres d'hotel are responsible for all aspects of food and beverage service in formal dining establishments. In general, they have the following duties and responsibilities:

- hire, train and supervise food and beverage service staff
- schedule staff hours
- order dining room supplies and equipment
- take reservations
- greet guests and assign tables
- settle customer complaints
- maintain and control smallware and liquor inventories
- prepare cash receipts after the restaurant closes
- participate in management activities such as menu development, budgeting and revenue forecasting.

They may also be responsible for marketing and advertising the restaurant.

Working Conditions

Supervisors of food and beverage service generally work in pleasant surroundings. They often work evenings, weekends and holidays. At busy meal times, they are constantly on their feet to ensure that customers are served promptly.

Personal Characteristics

Supervisors in food and beverage service need the following characteristics:

- a good memory for details and guests
- good verbal communication skills
- the ability to remain pleasant and diplomatic at all times.

They should enjoy co-ordinating information (e.g. schedules, stock), supervising the work of others and working with a variety of people.

Educational Requirements

(section revised OCTOBER 2005)

Food and beverage service supervisors in formal dining rooms need a good working knowledge of food preparation and wines. Although many employers prefer to hire post-secondary program graduates for supervisory positions, the primary requirement is previous experience in the hospitality industry. Training may be on the job.

Those who wish to advance to management positions in the hospitality industry should obtain related training and certification. For example, server intervention training such as the "It's Good Business" course offered by the **Alberta Hotel and Lodging Association**, food safety training and food allergy training are definite assets when looking for employment.

In Alberta, colleges, technical institutes and universities throughout the province offer post-secondary programs in business administration and management. The following institutions offer post-secondary programs that are less than one year in length and directly related to management in the hospitality industry (for information about longer programs, see the Restaurant Manager occupational profile):

- The **Northern Alberta Institute of Technology** in Edmonton offers a:
  - one year certificate and a two year Hospitality Management diploma program. The minimum education requirement for both programs is Grade 11 including English and math.
  - two year Food and Nutrition Management diploma program. The entrance requirement for this program is a high school diploma with English 30 or 33, Math 20 or 23, Biology 20 or 30 and any other 30 level science.
- **Red Deer College** offers a one-year certificate program in Hospitality and Tourism with a specialization in food and beverage management. The entrance requirement is a high school diploma or equivalent.
- **Robertson College** offers a 40-week International Hospitality and Hotel Management program. The entrance requirement is a high school diploma with a Grade 12 English.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Alberta Tourism Education Council (ATEC)** has developed occupational standards for hosts/hostesses and maitres d'hotel, and offers certification which is recognized throughout the tourism and hospitality industry in Canada.

Employment and Advancement

(section revised JANUARY 2006)

Supervisors of food and beverage service in the hospitality industry are employed in restaurants, lounges, private clubs and other formal service establishments.

Experienced supervisors may advance to positions such as banquet manager, catering manager or restaurant manager. Supervisors who have related post-secondary education or ATEC certification have an advantage when applying for further advancement.

Food and beverage service supervisors in formal dining rooms are part of the much larger National Occupational Classification 6212: Food Service Supervisors. In Alberta, over 75 per cent of people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,550 Albertans are employed in the Food Service Supervisors occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 170 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since supervisors in formal dining rooms form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for supervisors in formal dining rooms.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Since captains serve customers directly, as well as supervise food and beverage servers, they may receive tips. In most restaurants, food and beverage servers contribute a portion of their tips to a tip pool which is distributed among all food and beverage service workers, including food service supervisors.

Earnings in this group of occupations vary tremendously depending on the responsibilities of the position and the nature of the dining establishment.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Food Service Supervisors occupational group working part-time or full-time earned from **$9,600 to $41,500 a year.** The average salary was **$16,300 a year.**

Food and Nutrition Manager

Produced MARCH 2003

Food and nutrition managers provide nutrition care and supervise food service operations in health care settings and commercial food service establishments.

NOC Number(s): 6212
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: M D s

Duties

Duties and responsibilities vary from one position to another but, in general, food and nutrition managers:

- supervise food preparation and service operations (for more information, see the Food Service Supervisor occupational profile)
- plan and evaluate menus according to nutrition standards and menu planning principles
- co-ordinate and plan food service department operations by setting department goals, policies and procedures
- monitor, maintain and improve quality standards through audits, surveys, checks and inspections
- maintain safety and sanitation standards
- establish, monitor and evaluate customer service plans
- purchase food, equipment and supplies to established specifications and ensure proper receiving and storage
- implement budgets and control costs
- market food services within their organizations or to the public in general
- interview clients and gather information to assist in developing nutritional care plans
- make recommendations for improving food intake based on clients' needs and established guidelines
- adapt client menus for special nutrient needs or restrictions
- hire, train and direct the work of food service personnel
- keep records of customer information.

Food and nutrition managers work as part of a team with representatives of other departments in their organizations. They may work under the direction of dietitians (for more information, see the Dietitian occupational profile).

Working Conditions

Food and nutrition managers may work rotating shifts, including weekends and holidays. They spend long periods of time standing while supervising food production and service in warm, sometimes noisy kitchens. Some lifting up to 10 kilograms may be required.

Personal Characteristics

Food and nutrition managers need the following characteristics:

- an interest in food and its composition, preparation and service
- an interest in helping people make healthy choices
- the ability to put clients at ease and instill confidence
- excellent verbal and written communication skills
- organizational and leadership abilities
- good problem-solving skills
- the ability to work in a team environment
- the ability to adapt in an atmosphere of constant change.

They should enjoy directing the work of others and compiling information.

Educational Requirements

(section revised FEBRUARY 2004)

Food and nutrition managers need **related post-secondary education**.

In Alberta, the following post-secondary institutions offer food and nutrition management programs:

- **Bow Valley College** in Calgary offers a one year Level I and Level II Nutrition Manager program. Applicants must be employed in the food service area.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Food and Nutrition Management diploma program that includes a four-month practicum. The minimum entrance requirement is a high school diploma with English 30 or 33, Math 20 or 23, Biology 20 or 30 or any other 30-level science.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Canadian Healthcare Association** offers a two year distance education program in Food Service and Nutrition Management. The entrance requirement is Grade 12 or equivalent education. Applicants must be working in food service at least half-time and perform supervisory duties at least 30 hours a month.

For information about related degree programs, see the Dietitian occupational profile.

Other Requirements

The Canadian Society of Nutrition Management offers certification in nutrition management. Certification is not mandatory.

Employment and Advancement

(section revised JANUARY 2006)

Food and nutrition managers are employed by organizations that sell food or food products, have food service outlets or provide nutritional services to clients. For example, they may work for:

- restaurants
- catering companies
- cafeterias in large organizations
- schools or post-secondary institutions
- correctional institutions
- hospitals or community health centres
- continuing care centres or nursing homes.

Food and nutrition managers are part of the larger National Occupational Classification 6212: Food Services Supervisors. In Alberta, over 75 per cent of people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,550 Albertans are employed in the Food Service Supervisors occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 170 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since food and nutrition managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for food and nutrition managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Food Service Supervisors occupational group working part-time or full-time earned from **$9,600 to $41,500 a year.** The average salary was **$16,300 a year.**

Food Science Technologist

Produced MARCH 2005

Food science technologists work independently or provide technical support in laboratory analysis, food product development, processing, quality assurance or regulatory positions.

NOC Number(s): 2211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Food science technologists may work in one of four areas:

- In **applied research and development,** they assist in the development of new processing methods and new or improved foods to meet customer requests for healthier and safer foods. In general, they conduct tests to see that products meet government and industry standards and satisfy consumer needs (e.g. have a long shelf-life).
- In **quality control or assurance,** they check raw ingredients for freshness, maturity or stability for processing, and check finished products for safety, quality and nutritional value. They also may develop scientifically-based quality assurance programs, inspect processing line operations, or develop and improve packaging and storage methods.
- In **processing plants,** they develop production specifications, schedule processing operations, and evaluate processing and storage operations. They may be employed in managerial positions.
- In **regulatory agencies**, they inspect food processing operations. For related information, see the Agricultural Commodity Inspector occupational profile.

To ensure food safety, food science technologists monitor hazard analysis and critical control point (HACCP) programs and take corrective active when necessary.

Working Conditions

Food science technologists work in laboratories and processing plants. In some working environments, they may be required to work shifts.

Personal Characteristics

Food science technologists need the following characteristics:

- good organizational skills
- a high degree of intellectual curiosity
- the ability to work well as part of a team
- creative problem-solving skills
- good interpersonal skills.

They should enjoy using instruments and equipment to perform tasks requiring precision, analyzing data and conducting sampling and analysis programs, and supervising the work of others.

Educational Requirements

Food science technologists need **post-secondary education in a related field such as chemical technology, chemistry, biochemistry or microbiology**.

Three and four year degree programs and up-to-two year transfer programs in biochemistry, chemistry and microbiology are offered by colleges, university colleges, and universities located throughout Alberta. For more information, see the Biochemist, Chemist, Dietitian and Microbiologist occupational profiles.

Two year diploma of technology programs are offered by institutes of technology and colleges. For more information, see the Chemical Technologist and Food and Nutrition Manager occupational profiles.

Employment and Advancement

(section revised JANUARY 2006)

Food science technologists work for food and beverage processing and manufacturing companies, and private consulting firms, involved in:

- meat and poultry slaughter and processing
- dairy processing
- cereal grains and their products including flour, cereal, pasta and snack foods
- bakery and confectionery goods
- vegetable oil refining and product manufacturing
- soft-drink manufacturing
- brewing, wine-making and distilling
- vegetable processing
- sugar manufacturing
- specialty foods manufacturing.

Most new graduates start as technicians, often in junior positions. Experienced food science technologists can move into:

- supervisory or administrative positions in quality assurance, inspection or regulation
- production management trainee positions leading to plant supervisory positions
- marketing and sales
- new product development, and process research and development
- regulatory positions with federal and provincial government agencies
- consulting positions with international food agencies such as the United Nations' World Health Organization (WHO), the Canadian International Development Agency (CIDA), the Food and Agriculture Organization (FAO) or PLENTY Canada.

Food science technologists are part of the much larger National Occupational Classification 2211: Chemical Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 2,150 Albertans are employed in the Chemical Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since food science technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for food science technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Chemical Technologists and Technicians occupational group working part-time or full-time earned from **$23,500 to $89,300 a year.** The average salary was **$53,600 a year.**

Food Scientist

Produced MARCH 2005

Food scientists investigate the chemical, microbiological, physical and sensory nature of food, and apply their knowledge in the development, processing, preserving, packaging, distributing and storing of foodstuffs.

NOC Number(s): 2121.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Food scientists may work in research, processing and product development or management. Their job titles often reflect their area of specialization (e.g. food chemist, food microbiologist, food engineer).

In general, food scientists work in five areas:

- **basic research** - studying the structure and composition of food, or the changes foods undergo in storage and processing. For example, research scientists may develop new sources of protein, or search for factors that affect the flavour, texture or appearance of foods.
- **applied research and development** - developing new processing methods and new or improved foods to create healthier and safer food products with a longer shelf life. Research and development scientists often work very closely with marketing personnel.
- **quality assurance** - checking raw ingredients for maturity or stability for processing, and finished products for safety, quality and nutritional value. Food scientists in this field also may develop quality assurance programs, inspect processing operations, develop and improve packaging and storage methods or conduct product analysis.
- **processing** - developing production specifications, scheduling processing operations, evaluating processing and storage operations in processing plants, and working with engineers and plant operators.
- **regulatory** - inspecting food processing operations, investigating food borne illness outbreaks and co-ordinating recalls. For related information, see the Agricultural Commodity Inspector occupational profile.

To ensure food safety, food scientists develop, implement and monitor Hazard Analysis and Critical Control Point (HACCP) programs.

Working Conditions

Food scientists generally work in offices, laboratories and processing plants. Those employed in processing plants may work shifts including evenings, weekends and holidays.

Personal Characteristics

Food scientists need the following characteristics:

- good organizational skills
- a high degree of intellectual curiosity
- strong communication and public speaking skills
- the ability to work as a member of a team
- creative problem-solving abilities
- excellent interpersonal skills.

They should enjoy:

- synthesizing information to develop innovative approaches to problems
- using instruments and equipment to perform tasks requiring precision
- supervising the work of others.

Educational Requirements

The minimum education requirement for food scientists is a **four year bachelor's degree in a related discipline** such as food science, biochemistry, chemistry or microbiology. Advancement opportunities are best for those who have a related master's degree. A doctoral degree (PhD) is generally required for independent research positions, university teaching positions and executive positions in companies.

In Alberta, the **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree program in Nutrition and Food Science with a specialization in food science and technology. The entrance requirement is a minimum average (65 to 80 per cent) in English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and one other approved Grade 12 subject (Physics 30 recommended for the food science and technology specialization). The University of Alberta also offers master's and doctoral degree programs in food science.

The University of Alberta and other universities and university colleges in Alberta offer related four year degree programs in biochemistry, chemistry and microbiology. For information about these programs, see the Biochemist, Chemist and Microbiologist occupational profiles.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Most companies involved in food and beverage processing or manufacturing employ food scientists. Major sectors in Alberta's food processing industry include:

- meat and poultry slaughter and processing
- dairy processing
- cereal grains and their products (including flour, cereal, pasta and snack foods)
- bakery and confectionery goods
- vegetable oil refining and product manufacturing
- soft drink manufacturing
- brewing, wine making and distilling
- vegetable processing
- sugar manufacturing
- specialty foods manufacturing.

Food scientists may work in research and development, quality assurance, inspection, management, or production or processing areas (in food plants). Retail food chains employ food scientists to develop food safety programs.

Food scientists also may be employed in the Government Services or Education industries, or work overseas as consultants with international food agencies such as the United Nations' World Health Organization (WHO), the Canadian International Development Agency (CIDA), the Food and Agriculture Organization (FAO) or PLENTY Canada.

Most new graduates start work as technicians, often in junior positions. Once they have gained experience, they can move into:

- supervisory or administrative levels of quality assurance, inspection and regulation
- production management trainee positions leading to plant supervisory positions
- marketing and sales
- new product development, and process research and development
- regulatory positions with federal and provincial government agencies.

Food scientists employed by federal and provincial government agencies may advance from laboratory technician positions to scientist or supervisory positions. A master's degree may be required for advancement.

Research and teaching positions at universities and technical institutes generally require a doctoral degree, particularly at universities.

Salary

(section revised SEPTEMBER 2005)

Food scientists' salaries vary considerably depending on the scientist's qualifications and the employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists occupational group working part-time or full-time earned from **$29,400 to $103,200 a year.** The average salary was **$64,800 a year.**

Food Service Helper

Produced MARCH 2003

Food service helpers clear tables and assist workers who serve food and beverages in restaurants and other food service establishments.

NOC Number(s): 6641.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M s

Duties

Dining room assistants assist food and beverage servers in restaurants and formal dining establishments. In general, they perform the following duties:

- clear and reset tables
- wipe tables or remove and replace soiled table linens
- carry dirty dishes to the dishwashing area
- serve water or bread products to customers
- ensure that each table has supplies of sugar, butter, etc.
- bring out trays of food
- serve coffee
- clean up spilled food and broken dishes.

Dining room assistants must be quick to help food and beverage servers whenever their assistance is needed. During less busy periods between mealtimes, they may:

- stock cabinets
- spot-clean walls
- dust
- vacuum
- perform other tasks such as scraping and stacking dishes in the kitchen.

Food and beverage service runners or assistants deliver food orders from the kitchen to the appropriate tables. Runners may also perform duties similar to those of dining room attendants.

Caterer helpers assist caterers with the service of food and refreshments at social functions and banquets. In general, they perform the following duties:

- arrange tables and decorations according to instructions
- prepare simple foods and beverages
- distribute food to servers
- collect dirty dishes and return them to the kitchen
- scrape dishes and either wash them or pack them for transporting and washing at the caterer's establishment
- collect and pack tablecloths and accessories for transport.

Working Conditions

Food service helpers usually work shifts, sometimes split shifts, and often work weekends and holidays. At busy mealtimes, they are constantly on their feet and under pressure to work quickly. They may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Food service helpers need the following characteristics:

- good health and personal hygiene
- an interest in learning about food and beverage service
- a cheerful, positive attitude
- the ability to work well in a team environment.

They should enjoy handling dishes, having clear rules and organized methods, and working with people.

Educational Requirements

There are no standard education requirements for food service helpers. They are trained on the job.

Employment and Advancement

(section revised JANUARY 2006)

Food service helpers are employed in restaurants and formal dining rooms. Most food service helpers are students employed in part-time positions.

When dining room attendants have learned food and beverage service skills by observing experienced food and beverage servers, they may advance to food and beverage server positions.

Food service helpers are part of the larger National Occupational Classification 6641: Food Counter Attendants, Kitchen Helpers and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 30,700 Albertans are employed in the Food Counter Attendants, Kitchen Helpers and Related Occupations group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 300 to 620 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since food service helpers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for food service helpers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Wages for food service helpers in non-union working environments generally range from **minimum wage to $8 per hour**. In most restaurants, food and beverage servers contribute a portion of their tips to a **tip pool** which is divided and distributed among other food and beverage service workers, including dining room attendants.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Food Counter Attendants, Kitchen Helpers and Related Occupations group working part-time or full-time earned from **$9,000 to $39,800 a year.** The average salary was **$13,300 a year.**

Food Service Supervisor

Produced MARCH 2003

Food service supervisors are responsible for the day to day management of food services in health care facilities, cafeterias, catering and hospitality establishments.

NOC Number(s): 6212
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

Food service supervisors work under the direction of food service managers. Duties vary from one position to another but, in general, food service supervisors:

- direct and co-ordinate the activities of workers operating kitchen equipment and preparing, portioning and serving food
- forecast menu requirements based on a master menu and prepare production sheets/orders for food preparation workers
- estimate requirements and order food, equipment and supplies
- supervise and direct the assembly of special diet and regular trays, and the delivery of food carts, ensuring that all food safety regulations are followed
- maintain food and equipment inventories
- develop equipment maintenance schedules, arrange for repairs as needed and evaluate new products
- supervise cafeteria services and catered events
- conduct audits regarding patient/client satisfaction, food wastage, sanitation and safety
- set up work schedules and train food service workers.

Depending on the size of the food service department, supervisors may also assist in:

- the development of departmental objectives, budgets, policies, procedures and strategies
- the selection and supervision of food service staff.

In continuing care centres and nursing homes, food service supervisors may visit incoming residents to determine their nutritional needs and preferences.

Working Conditions

Shift work is usually required, including weekends and holidays. Food service supervisors spend long periods of time on their feet in warm and sometimes noisy kitchens. Some lifting up to 10 kilograms may be required.

Personal Characteristics

Food service supervisors need the following characteristics:

- excellent physical health and stamina
- emotional maturity
- excellent communication and organizational skills
- good interpersonal skills for dealing with all types of people, from patients to medical professionals
- good problem-solving skills
- the ability to work effectively in a team environment
- the ability to remain composed when faced with unexpected problems and stressful situations.

They should enjoy co-ordinating information (e.g. schedules, inventory), supervising the work of others and working with people.

Educational Requirements

Food service supervisors must be familiar with all aspects of food service, including:

- food production
- menu planning and costing
- food safety and sanitation regulations
- food service activities and policies
- effective business practices.

Most employers prefer to hire job applicants who have related post-secondary education. For example, employers in the tourism and hospitality industry may prefer to hire graduates of related post-secondary programs (for more information, see the Banquet Manager, Caterer, Food and Beverage Service Supervisor in Formal Dining Rooms and Restaurant Manager occupational profiles).

Larger health care institutions are required to have qualified dietitians or food and nutrition management technologists in charge of their food service departments (for more information, see the Dietitian and Food and Nutrition Manager occupational profiles).

Employment and Advancement

(section revised JANUARY 2006)

Most food service supervisors are employed by:

- hospitals and community health centres
- continuing care facilities
- large organizations that have their own cafeterias
- commercial food establishments (including fast food outlets)
- contract food companies.

Advancement opportunities may be limited for food service supervisors who do not have related post-secondary education.

In Alberta, over 75 per cent of people employed as food service supervisors work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,550 Albertans are employed in the Food Service Supervisors occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 170 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for food service supervisors vary depending on the size and location of the employing organization.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Food Service Supervisors occupational group working part-time or full-time earned from **$9,600 to $41,500 a year.** The average salary was **$16,300 a year.** Salaries in hospitals and healthcare institutions are generally near the top of the range.

© Government of Alberta, Human Resources and Employment

Foreign Service Officer

Produced MAY 2003

Foreign service officers work in diplomatic offices in countries around the world providing advice to the Canadian government on foreign policy matters, and acting on behalf of Canada abroad.

NOC Number(s): 4168
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D I S**

Duties

In general, foreign service officers are responsible for:

- scientific, technical and information exchanges
- economic and political reporting
- negotiation with host countries
- public affairs activities
- promotion of trade and financial interests
- administration of Canadian missions abroad
- management of immigration programs
- assistance to Canadians travelling, studying and working abroad.

Foreign service officers are recruited and trained by the Canadian government for service in one of four streams. The responsibilities of those in each stream vary depending upon whether they are working abroad in diplomatic offices or in Canada.

The duties of foreign service officers in the **political/economic affairs stream** when abroad include:

- economic and political analysis of events in the host country
- advancement of Canadian foreign policy
- management of information regarding the host country and Canadian policy
- consular and administrative tasks.

When stationed in Canada, they may be responsible for:

- media relations regarding Canadian foreign policy
- supporting operations abroad
- dealing with foreign diplomats in Canada.

The duties of foreign service officers employed in the **international service (immigration and citizenship) stream** when abroad include:

- interviewing and counselling immigrant applicants to ensure that persons seeking admission to Canada meet the requirements set out by immigration legislation
- preparing reports and case summaries of applicants
- assisting with the emergency needs of Canadian citizens abroad
- analyzing and reporting on health, unemployment insurance and other social programs of the host country.

In Canada, foreign service officers in this stream may be responsible for:

- developing and analyzing immigration programs and policy
- monitoring human resource utilization
- reviewing and contributing to the improvement of humanitarian and refugee programs.

When abroad, foreign service officers in the **trade commissioner service stream** are responsible for helping Canada to gain a greater share of the world market. The duties of trade commissioners include:

- identifying and developing markets for Canadian products and services
- establishing and maintaining contact between Canadian exporters and government representatives of state

trading agencies abroad
- facilitating business contacts on behalf of Canadian client companies, federal and provincial government branches
- identifying and reporting on economic and trade-policy developments of the host country.

When stationed in Ottawa or assigned to a regional International Trade Centre elsewhere in Canada, trade commissioners may be responsible for policy formation and specialized areas of trade development.

When abroad, officers in the **management consular stream** are responsible for managing administrative programs at Canadian Missions. Their duties may include:
- administering program budgets
- negotiating leases and facilities for offices and staff quarters
- managing human resource programs for local staff
- conducting cost of living surveys
- providing services to distressed Canadians.

All foreign service officers must keep informed about the latest developments in Canadian policy, including current immigration regulations, guidelines and policies.

Working Conditions

Assignments for foreign service officers are usually two to four years abroad. Those in the political/economic stream usually are assigned to headquarters for a similar length of time. Those in the international service stream spend more time working abroad than in Canada. Trade commissioners spend two-thirds of their careers abroad.

Foreign service officers must be prepared to work anywhere in the world. In some countries, there are restrictions on personal movement for political or safety reasons. The housing provided is normally in good condition but, in some countries, water must be filtered and food disinfected. Food products may be unfamiliar in local markets and there may be endless line-ups. It is usually not possible for spouses to work abroad.

Personal Characteristics

In general, foreign service officers need the following characteristics:
- an adventurous spirit
- the flexibility required to change their lifestyle
- patience
- good judgment
- a sense of humour
- initiative
- excellent communication skills, both oral and written.

In addition, those employed in the **political/economic stream** should have:
- a tolerance for uncertainty
- keen analytical abilities
- good decision making skills
- strong negotiation skills.

Those employed in the **international service (immigration and citizenship) stream** should have the ability to:
- deal with people at all levels of society
- handle stress
- make decisions
- assess human potential
- make sound and consistent judgements.

Trade commissioners are required to be:
- results-oriented
- sensitive to local customs and business practices
- able to anticipate changes
- enthusiastic
- self-motivated.

Foreign service officers should enjoy co-ordinating information and taking charge of situations, finding innovative solutions to problems, and consulting with and advising people.

Educational Requirements

Applications for foreign service officer positions are accepted once a year (usually in September) by the Public Service Commission of Canada. To be eligible to apply, applicants must be:

- Canadian Citizens
- able to reach the required level of bilingualism within one year
- willing to accept assignments anywhere in the world
- able to qualify for a top secret security clearance
- medically suitable to go abroad.

The academic qualifications required are subject to change. For recent competitions, eligibility was open to candidates who had a master's or doctoral degree in any field, except for the management and consular affairs stream for which the requirement was a graduate degree in administration, management, accounting, industrial/labour relations, psychology or sociology.

Other Requirements

Applicants are required to take a written examination. The examination is administered in universities and government offices across Canada in October of each year. The examination measures an individual's:

- verbal, numerical and reasoning ability
- written communication skills
- knowledge of the foreign service.

The names of those who have achieved satisfactory scores are forwarded by the Public Service Commission to the Department of Foreign Affairs and International Trade for screening. The screening process for candidates consists of submission of a personal history and fingerprint form, and a two part interview (part one is a personal assessment interview; part two is a three-hour group simulation exercise).

After the screening process is complete, applicants selected as potential candidates must provide additional information for security clearance and reference checks. Offers of employment are made once the selection process is complete *and* a match is made with available positions.

Newly selected foreign service officers are placed on probation for one or more years depending on their stream. Training is provided in the stream for which they were selected.

Political/economic stream officers train for up to four years in Ottawa. Their training includes:

- courses in department procedures
- training in Canadian policies and programs abroad
- necessary foreign language training
- courses related to the specific duties of their assignment.

International service (immigration and citizenship) stream officers train for eight months to two years in Ottawa. They receive training in:

- immigration legislation, regulations and procedures
- policy issues and special programs such as refugee and humanitarian programs
- passport services
- interviewing techniques
- consular responsibilities involving assistance to Canadians.

Trade commissioners train in Ottawa for a period of two years. The first year is generally divided into assignments of a trade promotion nature. The second year is spent training for their assignments and receiving the necessary foreign language training.

Management/consular stream officers spend up to two years in Ottawa being trained in departmental administration systems and procedures, consular policies and program requirements.

All officers receive foreign language training prior to their posting abroad.

Employment and Advancement

Political/economic stream officers and trade commissioners are employed by the Department of Foreign Affairs and International Trade. International service stream officers are employed by Citizenship and Immigration Canada.

Five to six thousand applications are received each year. From those applicants, only several hundred make it to the screening stage and approximately a quarter of those interviewed are selected as potential candidates. The number of positions available varies from year to year.

After a probation period, officers whose performance satisfies the needs of the programme are promoted to the next level. For the management /consular stream, advancement is dependent on work performance, a minimum number of years at each level, and the availability of positions at the next level.

Foreign service officers may request cross-stream assignments to broaden their knowledge.

Salary

Individuals requiring official language training before their appointment in the political/economic, trade commissioners' service and international service streams are paid an annual allowance of **$35,220** during their training. Once they reach the required level of proficiency in the other official language, the starting salary is **$44,026** with regular increases bringing the salary to **$55,495** in their fifth year. The starting salary for the management/consular stream is **$43,863 (2002 figures)**.

In addition to their salaries and their health, dental and pension benefits, foreign service officers may receive a premium for serving abroad, a cost-of-living allowance or a hardship allowance. Foreign service officers may also receive:

- supplemental vacation leave with payment of some travel costs
- an allotment for moving personal effects
- equivalent-to-Canada medical care
- paid educational costs for children overseas.

Foreign service officers and their families are housed in government-leased and furnished accommodations, but must pay rent.

Forensic Laboratory Analyst

Produced OCTOBER 2005

Forensic laboratory analysts use scientific principles and technology to analyze, identify, compare, classify and interpret physical evidence submitted by police and related agencies.

NOC Number(s): 2211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Forensic laboratory analysts examine physical evidence to:

- determine its significance for the investigation and prosecution of criminal offenses or suspected offenses
- determine if it can identify or exclude a suspect, or impact the direction of an investigation
- test a hypothesis proposed by an investigator, Crown attorney or defence counsel
- assist in coroners' investigations and other matters of public safety.

Their duties vary depending on their areas of expertise:

- Analysts in the **biology** section identify biological fluids using DNA typing or serological techniques, and may examine hair and fibre evidence.
- Analysts in the **chemistry** section recover non-biological trace evidence in clothing or samples from crime scenes to identify them or compare them to other materials.
- Analysts in the **electronics** section examine various devices particularly those with digital information such as computers, personal organizers and cell phones. They also examine electrical and electronic devices to determine the reason for malfunction (for example, in cases of electrocution).
- Analysts in the **firearms** section determine whether an ammunition component has been loaded into or fired from a particular firearm, assess the mechanical condition and legal status of firearms, analyze gunshot residue and bullet paths, restore serial numbers, and determine whether a tool mark impression was made by a given tool.
- Analysts in the **photoanalysis** section perform a variety of physical comparisons that can be demonstrated by photographic means.
- Analysts in the **questioned documents** section examine bank notes and negotiable instruments such as traveller's cheques to establish their authenticity, and analyze handwritten and machine-produced textual evidence to decipher altered or obliterated text or determine authorship, age or source.
- Analysts in the **toxicology** section analyze body fluids such as blood and urine samples for alcohol and other volatiles, identify and quantify drugs and poisons in biological fluids and tissues, analyze suspicious powders and food that may have been tampered with, and interpret the pharmacological effects of a drug or a combination of drugs on an individual.

Forensic laboratory analysts are employed as scientists or technologists. In general, **scientists** in all sections:

- plan and supervise experiments, tests and analyses
- interpret experimental or analytical results
- prepare written reports and update databases
- develop new technologies and validate new techniques
- train staff members and external clients
- testify in criminal court cases about the significance of physical evidence.

In general, **technologists** in all sections:

- perform experiments, tests and analyses
- operate and maintain laboratory equipment and apparatus
- prepare solutions, reagents and sample formulations
- produce and compile results, and update databases

- develop new technologies and validate new techniques
- train staff members and others
- testify in criminal court cases about exhibit handling, continuity and analytical procedures.

Forensic laboratory analysts are civilian employees who work primarily in laboratories. Police officers conduct investigations. Forensic laboratory analysts receive and analyze materials from crime scenes, and present and discuss results with police investigators, lawyers and medical practitioners.

Working Conditions

Forensic laboratory analysts often work in teams or perform specific parts of an analysis before passing a case to another analyst. Overtime or shift work may be required when there are high volumes of work. Specialists frequently travel to testify in criminal proceedings and other hearings.

Forensic laboratory analysts employed by the Royal Canadian Mounted Police are subject to transfer to other laboratory locations and must be prepared to travel frequently.

Personal Characteristics

Forensic laboratory analysts need the following characteristics:

- good character and no criminal record
- excellent communication skills including the ability to provide courtroom testimony in lay terms and undergo cross-examination
- organizational skills
- analytical ability and problem solving skills
- the ability to work independently and as part of a team.

They should enjoy using tools, instruments and equipment to perform tasks requiring precision, analyzing information and solving problems, and supervising the work of others.

Educational Requirements

The minimum academic requirement for **scientists** in most of the discipline areas is a related four year degree. Specific degree and course requirements vary depending on the employer and type of work. For example, some positions require a degree in a chemical or physical science, or mechanical engineering. Other positions require much more specific qualifications (for example, an honours Bachelor of Science degree in a field such as forensic science, biology, biochemistry, chemistry, microbiology or pharmacology).

Four year bachelor's degree programs in the physical and biological sciences are offered by universities and colleges throughout Alberta. Admission requirements vary but generally include a high school diploma or equivalent with English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Chemistry 30 or Biology 30 or Physics 30. Math 31 is recommended.

The minimum academic requirement for **technologists** is a related technical institute diploma or related work experience. Some positions require a three year diploma or specific courses.

In Alberta, two year diploma programs in biological and chemical science technologies are offered by the **Northern Alberta Institute of Technology** in Edmonton and the **Southern Alberta Institute of Technology** in Calgary. Admission requirements vary from one program to another but generally include a high school diploma or equivalent education with a competitive average in English Language Arts 30-1 or 30-2 (or English 30 or 33), Pure or Applied Math 30 (or Math 30, 31 or 33), Chemistry 30 or Biology 30.

Mount Royal College in Calgary offers a Certificate in Forensic Studies program by distance education. This program is designed for people who are already employed in health care or law enforcement.

Outside of Alberta, the following post-secondary institutions offer programs directly related to forensic science:

- **British Columbia Institute of Technology** in Burnaby offers an Advanced Specialty Certificate in Forensic Studies program and a Bachelor of Technology in Forensic Investigation degree program. The entrance requirements for the degree program are successful completion of a related two year diploma program, or equivalent, and six months of related work experience. Remedial bridging courses may be required. Applicants must also have a criminal background check and personal interview with the Program Head. Students must have a total of two years of related work experience prior to graduation.

- **Erindale College, University of Toronto**. Applicants must have completed at least four full course equivalents in university including general chemistry and calculus; a major in anthropology, biology, chemistry or psychology; and an average of at least B- in completed course work.
- **Laurentian University** in Sudbury, Ontario offers four Honours B.Sc. degrees in Forensic Science: one with an orientation toward biology and biochemistry, a combined program in forensic anthropology, a combined program in analytical chemistry and instrumentation, and a combined program in forensic psychology. Applicants who have an 85 per cent average in specified courses may be admitted directly from high school. The top 40 applicants are admitted to the program each year.
- **St. Mary's University** in Halifax, Nova Scotia offers a Diploma in Forensic Science program for degree program students who have declared a major and completed five credits with a quality point average of at least 3.00. Police officers or mature students who have previous related work experience may be accepted directly to the program.
- **University of Windsor** in Windsor, Ontario offers honours Bachelor of Forensic Science and Bachelor of Arts in Forensics and Criminology degree programs. The entrance requirement is an average of 70 per cent in six 30-level courses including English, biology, chemistry and calculus (or equivalent) for the BFS program and English, biology and calculus (or equivalent) for the BFAC program. Prior to third year, students must have a B average and reapply to be admitted to the final two years of these programs.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

After they are hired, specialists and technologists must complete in-house training programs before doing any casework. Training programs for specialists range in length from nine months to two years or more. Training programs for technologists last up to six months.

Employment and Advancement

Forensic laboratory analysts are employed by:

- the RCMP (in Edmonton, Halifax, Ottawa, Regina, Vancouver and Winnipeg)
- Canada Revenue Agency (Ottawa)
- the provincial governments of Ontario (Toronto and Sault St. Marie) and Quebec (Montreal)
- a small number of private forensic laboratories.

In Alberta, the Medical Examiner's Office is responsible for performing autopsies and does toxicological work in cases where no foul play is suspected. The RCMP does all other forensic laboratory work.

Advancement usually takes the form of pay increases and increased responsibility for one or more types of analysis. Experienced forensic laboratory analysts may be promoted to supervisory positions.

The employment outlook for this occupation is stable but there are only a few hundred positions in all of Canada. Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for laboratory analysts range from **$40,000 to $79,000 a year (2005 estimate).**

© Government of Alberta, Human Resources and Employment

Forest Technician

Produced JANUARY 2006

Forest technicians perform technical functions related to forest management, silviculture, harvesting, and conservation and protection.

NOC Number(s): 2223
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M I**

Duties

Forest technicians, as they are defined in this profile, work under the supervision of foresters or forest technologists. Duties and responsibilities vary from one position to another but, in general, forest technicians perform the following functions:

- survey forest areas and access roads
- conduct forest inventories by counting and measuring trees in plots along a grid to determine the volume of timber in an area
- make detailed drawings of and flag harvest blocks, haul roads and skid trails
- mark trees for harvesting operations
- inspect logs for defects, measure them to determine total volume and estimate the marketable content for use as sawlogs or pulpwood
- keep records of the amount and condition of logs reaching mills
- survey re-growth on cut areas
- inspect trees and collect samples of plants, seeds, foliage, bark and roots to record insect and disease damage
- use aerial photographs, global positioning systems (GPS) and geographic information systems (GIS) to map forest areas.

Forest technicians may use (or supervise workers who use) chain saws, clearing saws and manual tools, or chemicals to control weeds and undergrowth. They also may be involved in detecting and fighting forest fires:

- operating lookout towers
- combating forest fires on initial attack crews or fire suppression crews
- operating radios
- working at air tanker bases.

Working Conditions

Forest technicians work outdoors in all weather conditions, often performing tasks that are strenuous, sometimes on steep, wet or uneven terrain. Lifting requirements vary depending on the nature of the job but, in general, forest technicians routinely lift loads weighing up to 10 kilograms.

Forest technicians may commute daily to work in the woods or may have to be away from home for a week or more at a time. They may stay in small rural communities or in modern camps. When fighting forest fires, they often work twelve to sixteen hour shifts for several days at a time and may be required to lift equipment weighing up to 25 kilograms. Some positions are seasonal.

Personal Characteristics

Forest technicians need the following characteristics:

- physically fit
- able to pay close attention to details when taking measurements and updating computer databases
- good spatial and form perception for mapping and inspecting

- good motor co-ordination and manual dexterity for adjusting instruments and activities such as tree planting
- good communication and interpersonal skills for dealing with people and working as part of a team.

They should enjoy taking responsibility for projects, having clear rules and organized methods for their work, and solving problems by experimenting.

Educational Requirements

Forest technicians may acquire the required skills and knowledge of provincial forest legislation and regulations by training on the job or taking related education programs. (Note: Some employers use the title forest technician for technical positions requiring a two year post-secondary diploma or a university degree. For information about diploma and degree programs, see the Forest Technologist and Forester occupational profiles.) Computer skills are a definite asset, particularly familiarity with GIS and GPS systems.

In Alberta, the following post-secondary institutions offer one year certificate programs in forestry:

- **Northern Lakes College** in Slave Lake offers a 34 week Forestry Technician certificate program that also may be completed part-time or through self-study. Applicants must be physically fit and healthy, and have at least 30 high school credits including Grade 10 English and math (or write a test and score at the Grade 11 level in English and math).
- **Portage College** in Lac La Biche offers a 36 week Forest Technician certificate program. Applicants must be physically fit and healthy, have at least 60 per cent in English Language Arts 20-1 or 20-2 (or English 20 or 23) and Applied or Pure Math 20 (or Math 23), and complete a career investigation questionnaire.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Forest technicians are employed by:

- logging companies
- pulp and paper companies
- lumber companies
- forestry consulting firms
- private contracting firms
- provincial governments.

They may have training and work in a particular field:

- In **silviculture,** they work as members of site preparation, tree planting or stand tending crews or as nursery workers, or supervise crews.
- In **timber management**, they work on timber management crews as compass persons, regeneration surveyors, timber cruisers or mapping technicians.
- In **forest protection**, they work in insect and disease control, or as aerial observers, fire-fighters, helitack or rappel crew members, fire look-out personnel (tower personnel), timekeepers, radio operators, forestry warehouse persons or air tank base assistants.
- In **forest harvesting**, they operate equipment, do pre-harvest or post-harvest assessments, scale (grade) timber, or layout cutting blocks or roads.

In private companies or consulting firms, forestry technicians may be employed as log scalers, logging supervisors, woodland assistants/technicians, millworkers, stand tending crew members, fire suppression crew members or road engineering assistants.

Experienced forest technicians may advance to supervisory positions or move into related positions in provincial parks, survey crews, vegetation control, reclamation work, the oil and gas industry, woodlot management or forestry equipment operation. (For more information, see the Logging/Forestry Equipment Operator occupational profile.) Additional education is required to move into forest technologist or forester positions.

Forest technicians are part of the larger National Occupational Classification 2223: Forestry Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Forestry and Logging**
- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 650 Albertans are employed in the Forestry Technologists and Technicians occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since forest techncians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for forest technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Starting salaries for forestry technicians vary depending on the type of work performed.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Forestry Technologists and Technicians occupational group working part-time or full-time earned from **$24,300 to $68,300 a year.** The average salary was **$44,800 a year.**

© Government of Alberta, Human Resources and Employment

Forest Technologist

Produced JANUARY 2006

Forest technologists perform many of the technical functions involved in the scientific management of forested areas.

NOC Number(s): 2223
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: D M I

Duties

Forest technologists may work independently or under the supervision of foresters. Duties and responsibilities vary from one position to another but, in general, forest technologists:

- supervise timber harvesting (logging) and reforestation operations
- ensure oil and gas industry acitivies comply with forestry legislation
- develop or assist in the development of harvest plans
- take tree measurements and calculate timber volumes
- conduct pre-harvest and post-harvest surveys
- prepare, tender and supervise contracts relating to timber harvesting, scarification and planting
- educate the public through activities such as school talks, science fairs and trade shows
- direct wildfire control operations and monitor fire activities
- supervise seasonal staff and crews
- develop and deliver training programs
- supervise the implementation of watershed management and erosion control plans
- use aerial photographs, global positioning systems (GPS) and geopgraphic information systems (GIS) to map forest areas
- collect tree and vegetation field data
- interpret and apply environmental and forest legislation.

Working Conditions

Forest technologists may work outdoors in all weather conditions (rain, snow, cold etc.) performing tasks that are often strenuous, sometimes on steep, wet or uneven terrain, or indoors conducting experiments, analyzing data and writing reports.

Technologists who work primarily outdoors often work in remote locations, sometimes on their own. They may commute daily to forest sites or routinely be away from home for periods of a week or more, staying in modern camps or small rural communities.

Forest technologists may work 12 to 16 hour shifts when necessary to fight forest fires. Some technologists routinely work 12 hour shifts, four days a week.

Personal Characteristics

Forest technologists need the following characteristics:

- good clerical perception for taking measurements and updating computer databases
- good spatial and form perception for mapping and inspecting
- good motor co-ordination and manual dexterity for adjusting instruments and activities such as tree planting
- good communication and interpersonal skills for dealing with people and working as part of a team.

Those who work primarily outdoors also need to be:

- physically fit

- able to work alone effectively
- able to deal with mechanical problems such as skidoo breakdowns.

All forest technologists should enjoy directing and supervising others, taking a methodical approach to compiling information and enforcing regulations, and developing innovative approaches to problems.

Educational Requirements

Forest technologists are defined for the purposes of this profile as graduates of **two year or three year forest technology programs**. It should be noted, however, that the terms forest technologist and forest technician may be used differently by specific employers and post-secondary institutions.

Computer skills, particularly familiarity with GPS and GIS, are a definite asset.

In Alberta, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Forest Technology diploma program. The first year of this program includes five weeks in the fall at the Kidney Lake Field Training Camp in Swan Hills. The entrance requirement is a general high school diploma or equivalent with English 30 or 33, Pure Math 30 or Applied Math 30 or 33, and two of the following: Biology 20, Chemistry 20, Physics 20. This is a quota program with competitive admission; preference is given to applicants who have 30-level science courses. A St. John Ambulance First Aid Certificate and CPR Heartsaver Certificate are also required. An Alberta Class 4 Driver's License is highly recommended.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about other forestry programs, see the Forester and Forest Technician occupational profiles.

Other Requirements

Under Alberta's Regulated Forestry Profession Act and Registered Professional Forest Technologists Regulation, you must be registered with the College of Alberta Professional Forest Technologists (CAPFT) if you are practicing forestry on Alberta Public Land and are eligible to be a member. Only regulated members of the College have the right to use the title Registered Professional Forest Technologist.

Employment and Advancement

Work experience in the forestry field is a definite advantage for forest technology graduates seeking entry-level positions such as log scaler, timber cruiser or supervisor of a tree-planting crew. Related work experience may be obtained through summer employment with industry or government employers, or participation in the Forestry Youth program. Operated by Land and Forest Services, Alberta Sustainable Resource Development, the Forestry Youth program gives senior high school students work-related forestry experience.

Competition for permanent positions is keen. Post-secondary program graduates usually start their careers in seasonal positions and obtain permanent positions after gaining two to four years of experience. Most positions are in northern Alberta.

Experienced forest technologists may develop forestry plans or assist foresters in developing plans, supervise other forestry workers and technologists who acquire the data for plans, or actually do the field work required to implement plans. Or, they may move into related areas such as provincial parks, survey crews, reclamation crews or the oil and gas industry.

Forest technologists who have significant experience and appropriate qualifications may provide consulting services for the following types of employers:

- firms associated with the production and marketing of forest products (lumber, pulp and paper, plywood, panelboard)
- federal or provincial government departments or agencies
- schools, technical institutes and universities
- oil and mining companies
- power companies.

Forest technologists are part of the larger National Occupational Classification 2223: Forestry Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Forestry and Logging**
- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 650 Albertans are employed in the Forestry Technologists and Technicians occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since forest technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for forest technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Forestry Technologists and Technicians occupational group working part-time or full-time earned from **$24,300 to $68,300 a year.** The average salary was **$44,800 a year.**

Forester

Produced JANUARY 2006

Foresters plan, administer and direct programs related to managing forested lands and related renewable resources.

NOC Number(s): 2122
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I S D

Duties

Foresters work in close consultation with other land and resource management specialists to ensure that forest land is used wisely. Their objective is to optimize production of forest resources and minimize adverse impacts on the land, water and wildlife.

Foresters may:

- prepare and manage plans for reforestation or forest renewal, and oversee seed and tree planting programs for areas where trees have been harvested or burned by forest fires
- assess and deal with the impacts of wild fires, insects, diseases or pollution on forests and develop strategies to minimize forest losses
- prepare and manage long term engineering plans and oversee forest engineering activities such as road layout and construction, bridge construction and culvert installation
- plan and supervise long term timber harvesting operations to achieve minimal timber damage and waste, and minimize the impact of harvesting on aesthetics, wildlife, soil and water resources
- plan forest land use activities such as recreational activities, domestic grazing, timber harvesting, mining, and oil and gas drilling operations
- advise government and industry officials on forest management issues and assess new forest management applications
- manage public involvement processes to identify best practices for forest land use
- oversee the business aspects of forest use
- develop and deliver public education and awareness programs
- develop and use computer programs to aid in forest management.

Foresters also may work in land inspection and enforcement to ensure that forest-cleared lands are reclaimed to their most suitable end use, or that outdoor recreational activities and commercial land uses comply with the guidelines and regulations set for forested public lands.

Foresters working in watershed protection and wildlife management monitor wildlife populations and assess the impacts of forest operations on population and habitats, and study water yield variations following surface disturbances.

Forest scientists may work in forest management science and research areas such as:

- investigating the impact of forest operations on soils, water, wildlife and their habitats
- assessing human and environmental impacts (for example, air pollution, tree diseases, insects, fires and climate changes) on forest habitats
- investigating forest regeneration techniques
- developing and testing new forest products and harvesting processes
- conducting research on tree improvement (for example, developing superior trees through genetic selection)
- assessing how changes in forests impact humans on a social and economic level
- investigating new or alternative ways of enhancing forest renewal opportunities and/or minimizing the negative impact of harvesting.

Working Conditions

In entry level positions, foresters may spend a considerable amount of time working outdoors in the field, by themselves or with small crews. They may work in remote sites or bush camps or spend hours hiking in rugged country, wet muskeg areas or over steep terrain in all kinds of weather conditions. Forest fire control activities are physically demanding and hazardous.

Foresters may choose to continue working in field oriented positions but most foresters work primarily indoors, planning and administering programs or conducting research. Much of their time is spent on activities such as:

- accumulating and analyzing data
- working with a large team of professionals (for example, biologists, hydrologists) to complete land use plans
- corresponding and meeting with industry, government and environmental group representatives
- facilitating meetings with all land users
- developing provincial and federal forest policty
- writing reports or scientific papers
- delivering presentations.

Personal Characteristics

Foresters need the following characteristics:

- the ability to complete the required academic training
- the ability to work effectively alone and in a team environment
- good organizational and communication skills
- a keen interest in all aspects of nature and a serious concern for the environment
- the ability to direct the work of assistants and oversee several different projects at the same time.

Foresters should enjoy exploring things in depth, developing innovative studies and programs, dealing with people and directing the work of others.

Educational Requirements

Foresters must have a university degree in forestry. Forestry research positions usually require at least a master's degree in forestry; often, a doctoral (PhD) degree is required for independent research positions.

In Alberta, the **University of Alberta** in Edmonton offers four year Bachelor of Science degree programs in Forestry and Forest Business Management. The entrance requirement for the Forestry program is an average of at least 70 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Chemistry 30, Biology 30 and one other approved Grade 12 subject. The entrance requirement for the Forest Business Management program is a minimum grade point average in the first year of the Forestry program or 30 approved post-secondary credits. The program includes a one week field school and a three week field school. The University of Alberta also offers master's and PhD programs in forestry.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Outdoor experience (camping, bush travel, use of all-terrain or four-wheel-drive vehicles) is a definite asset. The Forestry Youth program, operated by Land and Forest Services, Alberta Sustainable Resource Development, provides work-related forestry experience for senior high school students.

Other Requirements

Under the Regulated Forestry Profession Act and the Registered Professional Foresters Regulation, you must be registered with the College of Alberta Professional Foresters (CAPF) to use the protected titles reserved for registered members (e.g. Registered Professional Forester, Forester-In-Training). Registration is mandatory if you meet identified competency requirements and intend to practice forestry on public lands.

Employment and Advancement

Foresters are employed by the following types of organizations:

- companies that produce forest products (lumber, pulp and paper, plywood, panelboard)
- consulting companies
- educational institutions
- government departments and agencies
- power companies
- oil and mining companies.

Some foresters are self-employed private consultants.

Because competition for entry level forestry positions is often keen, related summer work experience is practically a prerequisite for permanent employment.

After several years of work in junior positions, foresters may assume responsibility for assessing data gathered by forest technologists and forestry workers, planning and implementing projects, and supervising technologists and forestry workers who do fieldwork. With additional experience, foresters may move into management and administrative positions.

Foresters who have several years of work experience also may move into related fields such as land use planning, reclamation work, vegetation control, surveying or working in provincial parks.

Foresters are part of the larger National Occupational Classification 2122: Forestry Professionals. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Forestry and Logging**
- **Professional and Technical Services**
- **Public Administration**
- **Wood Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 400 Albertans are employed in the Forestry Professionals occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Forestry Professionals occupational group working part-time or full-time earned from **$27,600 to $75,500 a year.** The average salary was **$48,900 a year.**

Fundraiser

Produced FEBRUARY 2005

Fundraisers plan and organize annual fundraising programs, special gift appeals and capital campaigns to raise money for particular charitable groups or causes (e.g. community agencies, arts organizations, educational institutions, hospitals).

NOC Number(s): 5124
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M S**

Duties

Often working in conjunction with volunteer committees, fundraisers may be involved in a broad range of programs to raise money and other types of support for charities and other not-for-profit organizations. They may be responsible for:

- developing fund development plans and strategies
- implementing and managing fund development strategies
- raising money for current needs (programs, services, operating budgets and capital needs) as well as building endowment funds to secure long range and future funding
- recruiting and orienting volunteers
- preparing proposals and grant applications, and making presentations to service organizations, corporations, foundations and other community groups and individuals to solicit donations
- handling public relations activities such as writing news releases, newsletters and feature stories or participating in radio and television interviews
- planning and administering budgets
- conducting fund development audits and feasibility studies.

The first step in fund development is often research. Fundraisers survey a broad section of the community to test public opinion about the organization and determine what motivates giving. Then they design a strategy that will build relationships with donors and describes:

- how potential donors will be identified and approached
- the role of each staff member of the fund development program (paid and volunteer)
- how volunteers or staff will be recruited and trained
- budget allocations
- how the appeal will be presented to the public or defined target audiences
- how and when the fund development program will be carried out
- how donors and volunteers will be acknowledged.

When the fund development program has been approved, fundraisers:

- ensure compliance with regulatory requirements and organizational policies
- prepare requests for financial support from corporations, foundations and key individuals
- develop mailing lists
- solicit funds and accompany volunteers on visits with potential donors
- handle public relations tasks
- facilitate progress meetings
- build and maintain a donor database
- prepare an analysis of program results and recommend improvements for future fund development activities.

Some fundraisers work on a single program or campaign for a specific purpose, such as a new wing in a hospital or a research program, for a year or longer. Others work on several projects and programs at the same time.

Increasingly, fundraisers are specializing in areas of expertise such as:

- annual giving

- major gifts
- planned giving
- direct mail
- special events
- grant research and preparation
- capital campaigns.

Working Conditions

Fundraisers spend some time working alone writing proposals, researching prospective donors and analyzing data. However, most of their time is spent meeting people (on the phone, in groups, etc.). These discussions/presentations may be held during the day, after regular work hours or on weekends. Therefore, working days can range from six to 14 hours long. In a campaign or concerted fund development program, the work can become very hectic, adding a lot of pressure to already busy and complex schedules.

Travel may be required for some fund development programs.

Personal Characteristics

Fundraisers need the following characteristics:

- persistence and tact when dealing with others
- a high energy level, lots of enthusiasm and the ability to work under pressure
- a strong interest in the community and sense of ethics
- good communication skills in person and in writing
- the ability to lead, manage and work with volunteers
- the ability to motivate, persuade and inspire people
- the ability to manage (plan, organize and implement) complex projects.

They should enjoy co-ordinating information, finding innovative ways to handle problems, taking a methodical approach to researching information and dealing with people.

Educational Requirements

To be effective, fundraisers must be:

- knowledgeable about a wide variety of fundraising techniques
- sensitive to cultural differences in attitudes toward fundraising
- knowledgeable about local, provincial and federal legislation and regulations related to fund development activities
- able to use computers to compile and interpret statistical and financial information, present financial reports and produce gift proposals and grant applications.

People in this occupation come from a **wide variety of backgrounds**. Most employers prefer to hire fundraisers who have related post-secondary education or extensive paid or volunteer experience, preferably in a not-for-profit organization. Training through one of the professional associations or a post-secondary institution or CFRE certification is an asset (see Other Requirements).

In Alberta, education programs directly related to fund development are offered by the following post-secondary institutions:

- **Grant MacEwan College** in Edmonton offers a one year Voluntary Sector Management certificate program with a specialization in fund development. The program is offered in classroom and self-study/distance education formats. The entrance requirement is a high school diploma or equivalent and related experience. A career research essay and an interview are required.
- **Mount Royal College** in Calgary offers a four year Bachelor of Applied Nonprofit Studies degree program. The entrance requirement is the standard applied degree admission with English 30 and Social Studies. Mount Royal College also offes an eight course Certificate in Fundraising Management program through its Continuing Education Division. This is a National Program in Fundraising Education certficate program.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Association of Fundraising Professionals** (AFP) regularly offers a First Course in Fundraising and a more advanced Survey Course.

Other Requirements

The CFRE Certification Board administers Certified Fund Raising Executive (CFRE) certification, which is the accepted standard for all major fundraising associations (e.g. Association of Fundraising Professionals, Association for Healthcare Philanthropy, Association of Lutheran Development Executives, Canadian Association of Gift Planners).

Applicants for CFRE certification must have at least five years of fundraising experience and pass a certification exam.

Employment and Advancement

Fundraisers are employed by all types of not-for-profit and charitable organizations and some public sector organizations including:

- health facilities and disease-specific organizations
- educational institutions
- religious organizations
- cultural and arts organizations
- social service agencies
- consulting firms that provide fundraising services on a contract basis to non-profit and charitable organizations.

Experienced fundraisers in larger organizations may advance to campaign director or fund development director positions, or specialize in specific areas (see the Duties section of this profile). Advancement may require moving to another location or employer.

Salary

(section revised OCTOBER 2005)

Salaries for fundraisers vary considerably depending on the responsibilities of the position, size of the organization and its budget for development work.

According to a **2004 Association of Fundraising Professionals** salary survey, **mean (average) and median** salaries for fundraisers ranged from **$38,500 to $64, 500 per year** depending on their qualifications and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Professional Occupations in Public Relations and Communications occupational group working part-time or full-time earned from **$19,800 to $104,900 a year.** The average salary was **$55,400 a year.**

Funeral Attendant

Produced NOVEMBER 2005

Funeral attendants perform a variety of duties in connection with preparing for and conducting funeral services, and maintaining funeral home facilities and equipment.

NOC Number(s): 6683.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M s**

Duties

Funeral attendants assist funeral directors. They may:

- transfer human remains from the place of death to the funeral home
- place the casket in the visitation room or chapel prior to a prayer or funeral service
- arrange floral displays and adjust lights around the casket
- usher mourners to church or chapel seats
- assist in closing the casket and carrying flowers to the funeral coach or limousine
- help mourners into and out of the funeral limousine
- clean and drive funeral vehicles
- issue and store funeral equipment
- perform general maintenance duties.

If there is a crematorium on the premises, funeral attendants may perform cremations and process and package cremated remains.

Working Conditions

The work requires both indoor and outdoor activity. Working hours are generally regular although evening, weekend and holiday work is sometimes required. Remains may have to be picked up at any hour.

Heavy lifting (over 25 kilograms) is required.

Personal Characteristics

Funeral attendants need the following characteristics:

- emotionally stable
- in good health
- able to communicate with people from a variety of backgrounds
- able to take instructions and carry them out.

They should enjoy helping people.

Educational Requirements

Funeral attendants are trained on the job. Those who wish to become funeral directors or embalmers should have a high school diploma (for more information, see the Embalmer and Funeral Director occupational profiles).

Employment and Advancement

Funeral attendants are employed in funeral homes. They may advance to clerical or administrative positions or take distance education programs to become embalmers or funeral directors.

Funeral attendants are employed in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Elemental Service Occupations group working part-time or full-time earned from **$8,800 to $32,100 a year.** The average salary was **$16,100 a year.**

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Funeral Director

Produced NOVEMBER 2005

Funeral directors take charge of caring for the remains of people who have died, help families plan funeral services, and co-ordinate and manage arrangements for services.

NOC Number(s): 6272.1
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D S M**

Duties

Funeral directors co-ordinate the work involved in bringing the deceased to the funeral home and making all the necessary arrangements for a funeral service. In general, they:

- provide information about funeral service options, products and merchandise
- maintain a casket display area
- prepare funeral service contracts
- arrange funeral services according to the social or religious practices of the people involved
- help bereaved families with immediate legal, social and emotional concerns
- arrange for the time and place of funerals
- contact religious leaders, file death certificates, obtain burial permits, contact the cemetery and prepare obituary notices for newspapers
- arrange transportation for mourners, pallbearers and religious leaders
- oversee the conduct of funeral services.

Working Conditions

Funeral directors sometimes work long, irregular hours that may include many evenings and weekends. They work both indoors and outdoors regardless of weather conditions.

Heavy lifting (over 25 kilograms) is required.

Personal Characteristics

Since they work in an atmosphere of grief and bereavement, funeral directors need the following characteristics:

- maturity
- emotional stability
- compassion
- tact
- sensitivity to the needs of the people they serve.

They should enjoy supervising people and co-ordinating information, consulting with families, and having clear rules and organized methods to guide their activities.

Educational Requirements

Funeral directors need good business, organizational, interpersonal and communication skills. Those considering this occupation should discuss their education options with practicing funeral directors before enrolling in an education program.

In Alberta, the following institutions offer related post-secondary education programs:

- **Mount Royal College** in Calgary offers a 12 month, full-time program and a two year, part-time (distance) Funeral Director and Embalmer certificate program through the Faculty of Continuing Education and Extension. The entrance requirement for both programs is a high school diploma and Biology 30, or equivalent. Chemistry 30 is strongly recommended.
- The **Western School of Funeral Service** in Red Deer offers:
  - a 10 month Funeral Service Certificate program for people who are not sponsored or employed by funeral homes. The entrance requirement is a high school diploma or equivalent and two letters of character reference.
  - a two year Embalmer's Licensure program and a two year Funeral Director's and Embalmer's Licensure program. Applicants must be at least 18 years of age, have a high school diploma or equivalent, two letters of character reference and be sponsored by a licensed funeral director and embalmer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Funeral Services Act, funeral directors and embalmers must be licensed through the Alberta Funeral Services Regulatory Board (AFSRB). A license is not required to work as a funeral attendant under the supervision of a licensed embalmer or funeral director.

Employment and Advancement

(section revised JANUARY 2006)

Funeral directors work in funeral homes located throughout the province. The **Alberta Funeral Service Association** helps people interested in training as funeral directors to find potential employers. Re-location to a smaller, rural community may be required.

Self-employment is an option that requires a large capital investment to purchase or establish a well-furnished funeral home.

Funeral directors may use their business skills to transfer into related occupations. Many funeral directors are licensed embalmers as well.

Funeral directors are part of the larger National Occupational Classification 6272: Funeral Directors and Embalmers. In Alberta, people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 550 Albertans are employed in the Funeral Directors and Embalmers occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since funeral directors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for funeral directors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Funeral directors' earnings vary depending on location and ownership of the funeral home.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Funeral Directors and Embalmers occupational group earned **up to $66,100 a year**. The average salary was **$45,900 a year.**

© Government of Alberta, Human Resources and Employment

Furniture Mover

Produced OCTOBER 2003

Furniture movers move furniture, office supplies and equipment to and from homes, apartments, offices and storage establishments.

NOC Number(s): 7452.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Duties and responsibilities vary from one employer to another but, in general, furniture movers:

- greet customers and take an inventory of furniture and equipment being moved long distances, noting any existing defects or scratches
- cover floors and clear walkways as needed
- take apart large pieces of furniture such as beds and tables and wrap them to reduce the amount of space required and the risk of damage
- wrap and pack items, making sure that everything is secure
- courteously but briefly answer customers' questions or refer questions to office staff
- determine the order in which to load furniture to ensure that bulky or heavy items are placed in the lower part of the truck box or moving van
- work with a partner and/or use dollies and/or straps to move very heavy items such as appliances and large pieces of furniture
- carry articles and boxes to the moving van
- arrange articles in tiers to form a compact load, using padding and straps to secure articles and prevent shifting when the truck is in motion
- check to ensure that all items have been loaded and pick up floor runners
- drive moving vans to local or long distance destinations
- lay out floor runners and find where items should be placed at destination points
- accept payment from customers before unloading or bill corporate accounts
- remove straps and padding from articles and unload vans
- clean up and make sure everything has been delivered in the same condition as it was when picked up
- have customers sign the bill of lading and inventories.

If anything is found to be missing or damaged at the time of delivery, furniture movers must note the details so the company can trace the item or compensate the customer.

Furniture movers may also:

- drive long distances
- make minor repairs to furniture and equipment.

Working Conditions

A part of their day is spent riding in a van but, most of the time, furniture movers are on their feet. They frequently move items weighing over 55 kilograms and must use proper equipment and lifting techniques to avoid injury. Some furniture movers wear uniforms.

Employment may be seasonal in this occupation. The peak season is from May to September. Volumes increase at the end of each month.

Personal Characteristics

Furniture movers need the following characteristics:

- physical strength, stamina and co-ordination
- the ability to follow written and spoken instructions, and write clearly
- the ability to judge distances and space
- the ability to work independently
- the ability to organize their work and time effectively
- a customer service orientation and the ability to get along with customers who are often under stress, and work co-operatively with fellow employees
- a neat appearance.

They should enjoy handling, sorting and packing materials, using tools and equipment and arranging articles to form compact, secure loads.

Educational Requirements

There are **no standard education requirements** for this occupation but basic reading, writing and math skills are required. Related experience, a valid Alberta Class 1, 3 or 5 driver's license and an air brake endorsement are definite assets.

Furniture movers are **trained on the job**.

Employment and Advancement

(section revised JANUARY 2006)

Most furniture movers start as helpers employed for the summer months by transportation, storage and moving companies. Employers offer full-time, year-round p >sitions only to their most experienced and productive workers.

Advancement to other positions in larger moving companies (e.g. driver, dispatcher or estimator) may require a high school diploma. Some experienced furniture movers purchase their own trucks or tractor trailers and become independent operators who contract their services to long-distance movers and/or offer their services to the public.

Furniture movers are part of the larger National Occupational Classification 7452: Material Handlers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Wholesale Trade**
- **Transportation and Warehousing**
- **Retail Trade**
- **Management, Administrative and Other Support Services**
- **Food and Beverage Products Manufacturing**
- **Wood Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 20,500 Albertans are employed in the Material Handlers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 260 to 480 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since furniture movers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for furniture movers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Material Handlers occupational group working part-time or full-time earned from **$12,000 to $82,300 a year.** The average salary was **$28,900 a year.**

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Gas Pipeline Operators and Maintenance Workers

Produced AUGUST 2005

Gas pipeline operators and maintenance workers monitor the day to day operations of meter and compressor stations essential to the distribution and smooth flow of gas through pipelines.

NOC Number(s): 9232
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I d**

Duties

Duties vary from one employer to another but, in general, gas pipeline operators and maintenance workers perform the following types of duties.

Gas compressor operators monitor compressor and metering equipment and maintain station areas. Gas pipeline companies may have different categories of gas compressor operators. As people learn more about compressors and metering, they are usually given more responsibilities and move up to higher levels.

Gas compressor operators usually work at several different compressor stations and meter stations. At meter stations, they may:

- operate and monitor the operation of gas wells feeding into gathering systems
- monitor, program and adjust electronic and pneumatic measuring devices
- operate and maintain dehydrators and other wellsite equipment
- record the temperature, pressure and volume of gas in the pipeline
- take samples of gas and conduct basic tests
- analyze flow characteristics
- add chemicals to flow lines as required
- submit daily reports on facility operations.

At compressor and measurement stations, they may:

- ensure that all equipment is operating normally and perform minor mechanical maintenance, adjustments and repairs
- take readings from the various gauges and instruments
- make manual adjustments to valves or equipment.

Gas compressor operators must be aware of unusual changes in compressors and metering operations. When problems occur, they are usually responsible for handling the immediate problem and recommending any necessary changes. They also may be required to paint, wash, clean and do the general housekeeping necessary at each station.

In highly automated gas pipeline systems, compressor stations and meter stations may be controlled entirely by **gas control operators** at other locations who:

- monitor meters, gauges, indicators and alarm systems that provide information about the temperature, flow, pressure and amount of gas at any one place along the pipeline or at meter or compressor stations
- keep regular records
- respond to problems when they occur.

Gas control operators' duties vary with the level of automation of the pipeline system. Those working with highly automated systems may handle problems and make adjustments by using equipment in a control room. Those working with less automated pipeline systems may instruct other personnel to make manual adjustments at the location of the problem or at another control area.

Working Conditions

Gas flows through pipelines around the clock, every day of the year, so gas pipeline operators may work shifts or be on call outside of their regular Monday to Friday working hours. Some overtime may be required.

Gas pipline maintenance workers work outdoors in all kinds of weather conditions. They also may be required to drive to a variety of stations to check and repair equipment. All operators and workers are required to lift equipment weighing up to 25 kilograms.

Gas compressor operators, pipeline operators and maintenance workers must be aware of potential hazards and know how to handle emergency situations. Hazards include fluids under high pressure and deadly hydrogen sulphide which is often a component of gas that comes directly from the well.

Personal Characteristics

Gas pipeline operators and maintenance workers need to be:

- precise
- responsible
- handy with tools
- interested in working with machines and complex equipment
- comfortable around large, noisy equipment
- able to work on their own with little supervision.

In an emergency, they must be able to evaluate the situation and respond to it quickly and correctly. The safety of a number of people and the efficient handling of emergency situations often depend on their good judgement.

Gas pipeline operators and maintenance workers should enjoy:

- controlling equipment, instruments and machinery
- analyzing information to solve problems
- working with others in a team.

Educational Requirements

Employers generally prefer to hire **high school graduates who have experience or post-secondary education** in electronics, electrical systems, mechanics or instrumentation.

In larger companies, new employees are usually hired as **utility workers**. Initially, utility workers may do many of the physical jobs such as cleaning, painting and maintaining pipeline stations. As they gain experience, they may be given additional responsibilities in other areas of compressor or meter stations. It often takes a few years before utility workers can officially be classified as gas compressor operators. During the training period, utility workers may have opportunities to take in-house and technical school courses on compressor, metering and control room operations.

Enform (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and Nisku (near Edmonton) offers training programs. Contact Enform directly for information regarding course offerings and admission requirements.

Employment and Advancement

(section revised JANUARY 2006)

People looking for employment in gas pipeline operations should contact companies that operate gas pipelines, and oil and gas companies that operate small compressor stations and gas gathering systems.

Depending on their qualifications and experience, gas pipeline maintenance workers may be able to advance to gas control operator positions.

Gas pipeline operators and maintenance workers are part of the larger National Occupational Classification 9232: Petroleum, Gas and Chemical Process Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

Over 7,000 Albertans are employed in the Petroleum, Gas and Chemical Process Operators occupational group, which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since gas pipeline operators and maintenance workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for gas pipeline operators and maintenance workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Petroleum, Gas and Chemical Process Operators occupational group working part-time or full-time earned from **$35,400 to $115,000 a year.** The average salary was **$77,900 a year.**

© Government of Alberta, Human Resources and Employment

Gas Plant Operator

Produced AUGUST 2005

Gas plant operators control automated processes that convert raw natural gas into forms that can be used by consumers.

NOC Number(s): 9232
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I d**

Duties

Gas plant operators are responsible for the day to day operation of natural gas plants. They monitor all the units in the plant to ensure that everything is running smoothly.

Gas plant operators' duties vary depending on the size of the gas plant. In large plants, more operators are usually required and their jobs are more specialized. Smaller gas plants require fewer people who may have a wider range of duties.

Junior operators, sometimes called trainee operators, work in units in gas plants such as the sulphur handling unit where sulphur is removed or the treating unit where water and impurities are removed and the gas is separated into components. Under the direction of unit operators, junior operators:

- perform regular checks of their unit
- keep records of temperatures, pressures, concentrations and flows
- perform basic tests on the gas and chemicals at various processing stages
- make adjustments to maintain the process or correct problems
- perform minor equipment maintenance and repair tasks
- test air samples for signs of gas or chemical leaks
- ensure that flammable and other potentially dangerous products are in safe locations.

Unit operators ensure that an entire unit is operating smoothly. They are responsible for:

- training and supervising junior operators
- conducting and assisting with equipment inspections
- starting up and shutting down plant equipment
- reviewing and compiling records taken by junior operators
- maintaining equipment and making minor repairs or requesting that repair and maintenance work be done
- running product and boiler tests
- monitoring controls
- assisting junior operators in solving problems
- assuring the safety of others in their areas.

Senior operators, sometimes called chief operators or lead hands, are responsible for the operations of a number of units and usually are the most experienced operators on their shift. Senior operators spend most of their time working in a control room where there are a number of control panels and charts and an alarm system that sounds when a problem occurs. If adjustments need to be made in a unit, or an alarm goes off, senior operators call the unit operators concerned and outline the necessary procedures.

In sour gas plants, operators are trained in emergency evacuation and firefighting procedures.

Much of the work in gas plant operations is relatively routine. Gas plant operators may go for long periods of time without a problem and then a serious failure or complication may occur. When this happens, operators must analyze the problem and act quickly and correctly.

Working Conditions

Depending on the design of the plant, junior operators may spend about half of their time outdoors. Their job requires a considerable amount of walking and lifting (up to 25 kilograms). Unit operators spend most of their time indoors but may be required to work outside when there are problems with outdoor equipment. Senior operators spend much of their time in the control room.

Gas plants operate 24 hours a day so operators are required to work 8 or 12 hour shifts. Operators must follow safety precautions to avoid injuries resulting from exposure to toxic chemicals and gases.

Personal Characteristics

Gas plant operators need the following characteristics:

- mechanical aptitude
- mathematical ability
- good eye-hand co-ordination and manual dexterity
- good vision
- excellent hearing
- good communication skills
- good judgement
- agility and endurance.

They should enjoy controlling equipment, instruments and machinery, analyzing information to solve problems and working with others in a team.

Educational Requirements

In gas plants that use generating sources other than steam, operators may not be required to meet specific formal education requirements. However, a high school diploma with courses in mathematics, chemistry and physics is a definite asset.

Gas plants that have power boilers or sulphur recovery units require operators to have an Alberta Power Engineering Certificate. In Alberta, power engineers are certified through the **Alberta Boiler Safety Association**. There are five levels of certification, advancing from a Fifth Class certificate to a First Class certificate. Each level of certification has different training and employment experience requirements. For information about power engineering programs and certification requirements, see the Power Engineer occupational profile.

Some companies provide in-house training opportunities to help gas plant operators advance to more senior positions. First aid and safety training also may be required, especially in sour gas plants.

Post-secondary institutions that offer power engineering programs also may offer gas plant operations training by distance education (computer-managed learning or modularized materials). Admission requirements vary ranging from completion of Grade 10 math to a high school diploma with Grade 12 math and physics (or Science 30).

Other programs and courses related to gas plant operations are offered by the following institutions:

- **Enform** (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and in Nisku (near Edmonton) offers training courses for people already employed in the oil and gas industry.
- **Lakeland College** in Lloydminster offers a Gas Process Operations certificate program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33), and Physics 20 or Chemistry 20 (or 65 per cent in Science 20).
- The **Northern Alberta Institute of Technology (NAIT)** in Fairview offers a Gas Process Operations certificate program. The entrance requirement is at least a C in Grade 10 English and math, or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a one year Process Operations certificate program that includes four weeks of practicum at plant sites. The entrance requirement is 70 Alberta high school credits (Grade 11) with English 20 or 23 or equivalent. SAIT also offers a Gas Process Operations certificate program by distance education.

For information about two year diploma programs in chemical and petroleum engineering technology, see the Chemical Engineering Technologist and Petroleum Engineering Technologist profiles.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Gas plant operators are employed by oil and gas companies in gas plants which are generally located as close as possible to gas fields. There are hundreds of gas plants in Alberta: some near major cities, others in remote areas.

Individuals often start in field positions or as junior operators. Advancement to more senior positions such as unit operator and senior operator usually depends on experience and education. In gas plants where power engineering certificates are required, individuals may need higher certification to advance to more senior positions.

Senior operators may have the opportunity to move into supervisory positions, then advance to management positions located either at the plant or in major cities.

Gas plant operators are part of the larger National Occupational Classification 9232: Petroleum, Gas and Chemical Process Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,000 Albertans are employed in the Petroleum, Gas and Chemical Process Operators occupational group, which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since gas plant operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for gas plant operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for gas plant operators vary depending on the plant and the qualifications of the operator.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Petroleum, Gas and Chemical Process Operators occupational group working part-time or full-time earned from **$35,400 to $115,000 a year.** The average salary was **$77,900 a year.**

Gas Utility Operator

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Gas utility operators install and service gas utility pipeline systems that transport natural gas from its source to points of use such as building meter sets.

NOC Number(s): 7442.2
Minimum Education: Designated Occupation
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O i**

Duties

Gas utility operators may work on a particular type or a combination of the following systems:

- gas transmission distribution systems under various levels of pressure
- gas mains and services
- pressure controllers and regulators
- gas meter and measuring.

Their duties and responsibilities vary from one job to another but, in general, they:

- interpret prints and specifications to determine the location, size and materials required to install gas mains
- install and maintain cathodic protection to prevent corrosion in steel and aluminum pipes
- locate underground gas systems and conduct routine surveys of gas mains and distribution lines to detect and locate escaping gas
- carry out routine gas system maintenance functions
- operate and maintain regulating, measuring and odourizing facilities
- provide information about underground gas distribution lines and observe excavation work to ensure that underground gas facilities are protected
- investigate reports of gas leaks to determine the exact location and extent of leaks
- use equipment to expose gas lines and repair damaged pipes
- use laptop computers to keep records of work performed and the location and condition of pipelines.

Working Conditions

Gas utility operators work both indoors and outdoors at physically demanding tasks. Operators generally work a 40-hour work week but overtime may be required during emergencies or to meet construction deadlines.

Gas utility operators often work with explosive gases and power tools. To avoid injury, gas utility operators must follow safety codes and regulations and, during emergency situations, follow the specified procedures.

Operators may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Gas utility operators need the following characteristics:

- mechanical ability
- manual dexterity
- good customer service skills
- the ability to get along with fellow workers.

They should enjoy being physically active and working with little direction or supervision.

Educational Requirements

Gas utility operator is a **designated occupation** in Alberta. This means that training and certification are not required but trainees can apply to **Alberta Apprenticeship and Industry Training** for an Alberta Occupational Certificate. There is no minimum education requirement but, it is recommended that applicants have Alberta Math 10, Science 10 and English 10.

To **register**, trainees must find a suitable employer who is willing to hire a trainee. Most employers prefer to hire high school graduates or people who already have related training or experience (e.g. gasfitters). Prospective gas utility operators may be first hired as labourers and, if their work is satisfactory, offered trainee positions when they become available.

The **term of training** for a gas utility operator is a minimum of 24 months that include at least 3,400 hours of work experience.

Trainees who have related training or work experience may qualify for credit or certification.

Employment and Advancement

Gas utility operators are employed by gas utility and distribution companies and firms that contract services to those companies.

Experienced operators may advance to supervisory positions but further advancement opportunities are limited. Certified Alberta gas utility operators who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Gas utility operators are part of the larger National Occupational Classification 7442: Waterworks and Gas Maintenance Workers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Utilities**
- **Construction**
- **Transportation and Warehousing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Waterworks and Gas Maintenance Workers occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since gas utility operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for gas utility operators.) Employment prospects are best for those willing to work in smaller communities.

Turnover rates within major gas utility companies are relatively low.

Salary

According to the Alberta Occupational Training Committee for this designated occupation, experienced gas utility operators earn from **$12 to $28 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Waterworks and Gas Maintenance Workers occupational group working part-time or full-time earned from **$25,100 to $81,300 a year.** The average salary was **$49,300 a year.**

Gasfitter

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Gasfitters size, install, test, adjust and service natural gas and propane equipment ranging from residential furnaces to industrial boilers.

NOC Number(s): 7253
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Gasfitters employed by:

- **utility companies** repair and extend gas mains, and repair and service pipes and fittings between mains and buildings
- **propane distributors** install and service propane vaporizers, temporary heating equipment, propane metering and dispensing equipment, and propane pumping equipment
- **mechanical and service companies** install and maintain piping and appliances in residential, commercial and industrial buildings.

Duties vary from one position to another but, in general, gasfitters:

- determine the size and type of pipe, equipment, appliances and devices to use
- test, identify and select the correct piping and related materials
- measure, cut, thread and assemble pipe using tools such as pipe cutters, pipe threading machines and pipe vices
- install vents and flues and connect gas-consuming appliances such as ranges, dryers, barbecues, furnaces, boilers, space heaters, radiant and forced air heaters
- test and replace defective equipment or components
- start up and adjust new or repaired equipment
- prepare reports.

Gasfitters may also:

- install and repair underground gas mains and distribution pipes
- respond to calls about escaping gas
- assist in the investigation of gas fires and explosions
- convert motor vehicles or appliances to use other fuels (e.g. propane or natural gas)
- install and service propane and natural gas filling stations.

Gasfitters must follow codes, regulations and accepted safety practices.

Working Conditions

Gasfitters work both indoors and outdoors at physically demanding tasks. They work a 40-hour week with overtime sometimes required for emergencies or to meet construction deadlines. There is some risk of injury when working with explosive gases and power tools. Safety training is generally provided.

Gasfitters may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Gasfitters need the following characteristics:

- the skill to diagnose problems
- mechanical, electrical and electronic aptitude
- manual dexterity

- good customer services skills.

They should enjoy working with little direction or supervision.

Educational Requirements

To work in Alberta, gasfitters must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**.

- **Gasfitter 1st Class** apprentices must:
  - have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
  - find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.
- **Gasfitter 2nd Class** apprentices must:
  - have a Plumber or Steamfitter-Pipefitter trade certificate
  - find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees

The **term of apprenticeship** for:

- **gasfitter 1st class** is three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year.
- **gasfitter 2nd class** is two years (two 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year.

High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Gasfitters are employed in the construction, manufacturing and utilities industries.

Experienced gasfitters may advance to supervisory positions such as foreman, maintenance manager or service manager, or start their own contracting business. Alberta certified journeyman gasfitters who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as gasfitters work in the following industries:

- **Construction**
- **Utilities**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 550 Albertans are employed in the Gas Fitters occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **gasfitters 1st class** earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second year and 80 per cent in the third.

Apprentice **gasfitters 2nd class** earn at least 90 per cent of the journeyman wage rate in their place of employment in the first year and 95 per cent in the second.

According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates for the classes vary, but generally range from **$18 to $24 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Gas Fitters occupational group working part-time or full-time earned from **$21,800 to $76,400 a year.** The average salary was **$48,600 a year.**

Gemmologist

Produced APRIL 2003

Gemmologists apply their knowledge of natural gemstones, synthetics and imitations to identify and grade coloured stones and diamonds.

NOC Number(s): 7344.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O I M**

Duties

Duties vary from one position to another in this occupation but, in general, gemmologists:

- identify different types of gemstones (e.g. diamond, emerald, jade, ruby, topaz) and their synthetic counterparts
- differentiate between natural gems and stones that have been treated to enhance their colour or clarity or to stabilize them via plastic impregnation
- grade gemstones and pearls
- identify metals and differentiate between antiques and copies.

To identify gems, gemmologists may:

- examine surface and internal characteristics under magnification using a loupe or microscope
- use equipment such as a polariscope, dichroscope or polarising filter to detect optical characteristics
- measure refractive indices and, in some cases, interpret optical character and optic sign using a refractometer
- analyze absorption and fluorescent spectra using a direct vision spectroscope
- measure specific gravity by using hydrostatic or heavy liquid immersion techniques or by using calibrated measuring tools and calculating the weight of mounted stones
- use other more sophisticated testing procedures to identify synthetic and treated gem materials (e.g. radiology for pearls).

Depending on where they work, gemmologists may have a variety of additional responsibilities. For related information, see the Jeweller occupational profile.

Working Conditions

Gemmologists may work full-time, part-time, or on a contract or freelance basis. Travel is often required for those involved in selling wholesale gems or jewellery to retailers.

Personal Characteristics

Gemmologists need the following characteristics:

- honesty and integrity
- good colour vision
- manual dexterity
- good communication skills
- detail-oriented
- interested in geology, physics and chemistry
- able to work independently or as part of a team
- able to meet deadlines.

Gemmologists should enjoy using tools and instruments to perform tasks requiring precision, analyzing information to appraise gemstones, and having clear guidelines and organized methods for their work.

Educational Requirements

Training in gemmology generally involves **a combination of formal instruction and experience**. Employers prefer to hire gemmologists who have at least a Grade 12 education and a diploma in gemmology. Computer skills and courses in geology, chemistry and physics are definite assets.

Prospective students are advised to discuss their career plans with practising gemmologists before choosing a training route. Training programs are offered in a variety of formats (full-time classroom instruction, seminars and distance education) by a variety of sources, including the following:

- the **Canadian Gemmological Association** in Toronto and Vancouver
- the **Canadian Institute of Gemmology (CIG)** in Vancouver
- the **Gemmological Association and Gem Test Lab (GAGTL)** of Great Britain
- the **Gemological Institute of America** in Carlsbad, California
- **George Brown College of Applied Arts and Technology** in Toronto
- **Granton Institute of Technology** in Toronto
- the **H.R.D. Diamond High Council of Belgium**.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most gemmologists are self-employed. They may work for:

- retail jewellers
- appraisal laboratories
- wholesalers of diamonds and coloured gems
- jewellery manufacturers
- auction houses, pawnbrokers and other buyers and sellers of estate jewellery.

Gemmologists often become jewellery appraisers. Advancement in this occupation generally takes the form of establishing a business and building a larger customer base. Becoming an independent gem dealer requires a large financial investment.

With experience and additional training, gemmologists may become appraisers who apply their knowledge of the market value of gemstones to estimate their worth.

Gemmologists are part of the larger National Occupational Classification 7344: Jewellers, Watch Repairers and Related Occupations. In Alberta, most people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 300 Albertans are employed in the Jewellers, Watch Repairers and Related Occupations group which is expected to expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since gemmologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for gemmologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised MAY 2004)

Gemmologists' earnings vary depending on the scope of their responsibilities, location, the method of payment and the gemmologist's qualifications. Many gemmologists work on a commission basis.

Geneticist

Produced NOVEMBER 2005

Geneticists conduct research into the biochemical and physiological aspects of heredity, particularly the role of deoxyribonucleic acid (DNA), and carry out cytogenetic or molecular tests to aid in diagnosing disease.

NOC Number(s): 2121.2
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Research geneticists may specialize in many different areas including:

- biomedical genetics - the study of normal and abnormal genetic factors at the level of chromosomes, biochemistry or molecules (for the diagnosis and treatment of biochemical genetic conditions)
- developmental genetics - the study of the genetic control of cells and the processes by which they form multi-cellular organisms (normally during development or abnormally in cancer)
- biochemical and molecular genetics - the study of the basis of gene activity, transmission and mutation (including the manipulation of genes)
- population genetics - the study of natural variation and the processes of inheritance and evolution within populations of organisms including tracing human histories and geneologies
- plant and animal genetic research to serve human purposes (for example, to develop pharmaceuticals or improve crop yields or disease resistance)
- research with taxonomists to solve species identification and relationship problems
- the use of genetic markers in forensic analysis.

For information about geneticists involved in developing and improving industrial processes (for example, for the production of drugs, antibiotics or vaccines), see the Biotechnologist occupational profile.

Medical geneticists study the causes, prevention and treatment of human genetic conditions. Under the supervision of medical geneticists, genetic counsellors obtain family histories and hospital records, and provide advice regarding the risks involved in some genetic situations. Clinical geneticists/physicians are directly involved in patient care.

Other geneticists may be involved in field biology or laboratory investigations with microbes, plants or animals. This may involve working at a bench, building mathematical models or using computer simulations.

Working Conditions

Geneticists work in a laboratory environment with hazardous substances such as chemicals and radioactive materials. They sometimes work evenings and weekends to complete experiments.

Medical geneticists work in university medical centres or hospitals.

Personal Characteristics

Geneticists need the following characteristics:

- an interest in biology and biochemistry
- problem solving skills
- curiosity and imagination
- persistence and patience
- good communication skills
- manual dexterity for performing experiments
- the ability to pay close attential to detail
- a willingness to do the reading required to keep abreast of new developments and discoveries.

Some geneticists must be willing to work with animals (both invertebrate and vertebrate).

All geneticists should enjoy synthesizing information, finding innovative solutions to problems, using sophisticated instruments and equipment to perform tasks requiring precision, and supervising the work of others.

Educational Requirements

Geneticists must have an advanced degree in genetics. Most geneticists begin their studies in a four year Bachelor of Science degree program in a biological science, then go on to complete a master's or doctoral (PhD) degree in genetics **or** a Medical Doctor degree followed by specialty training and further study in a genetics program.

Graduates of B.Sc. degree programs in genetics or biochemistry may work as genetics technicians. Graduates of master's degree programs may work in high level technical positions. Genetic counsellors need a master's degree specifically in genetic counselling. A PhD is required to work as an independent researcher or teach at the university level.

In Alberta, the **University of Alberta** in Edmonton offers B.Sc., M.Sc. and PhD degree programs in genetics and M.Sc. and PhD programs in medical genetics. Graduate studies are offered in the Department of Biological Science and the Department of Medical Genetics.

The **University of Calgary** offers B.Sc., M.Sc. and PhD degree programs in cellular, molecular and microbial biology through the Department of Biological Sciences, a Bachelor of Health Sciences degree program with a specialization in biomedical science through the Faculty of Medicine, and M.Sc. and PhD programs administered by the Department of Biochemistry and Molecular Biology.

For information about bachelor's degree programs in related fields such biochemistry, microbiology and medicine see the Biochemist, Microbiologist and Physician occupational profiles.

Entrance requirements for suitable bachelor's degree programs vary from one program and institution to another but, in general, include a high school diploma with a competitive average (ranging from 65 to 80 per cent) in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Biology 30, Chemistry 30 and one other approved 30 level subject (Physics 30 and Math 31 recommended).

For current information about programs, entrance requirements and mature student admission policies, please check post-secondary calendars or websites.

University transfer programs and bachelor's degree programs in biological sciences are offered by post-secondary institutions located throughout Alberta. It is the student's responsibility to ensure that the transfer courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Other Requirements

Professional Biologist is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Professional Biologist, you must be a registered member of the Alberta Society of Professional Biologists (ASPB). You do **not** have to be registered with ASPB if you do not call yourself a Professional Biologist.

Employment and Advancement

(section revised JANUARY 2006)

Geneticists are employed by the following types of organizations:

- universities
- government departments
- hospitals
- pharmaceutical companies
- agribusiness companies
- biotechnology companies.

Geneticists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since geneticists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for geneticists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists and Related Scientists occupational group working part-time or full-time earned from **$17,000 to $99,400 a year.** The average salary was **$64,600 a year.**

Geographer

Produced AUGUST 2005

Geographers study the interactions between the distinctive, dynamic features and characteristics of the biosphere and of the human organization of activity within it. They may specialize in particular phenomena or regions at various scales of analysis.

NOC Number(s): 4169.3
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

Geographers may be engaged in a wide range of studies and activities. For example, they may provide consulting services in fields such as resource development and management, business location and market area analysis, environmental hazards, regional cultural history or urban social planning. They may:

- provide advice on environmental issues
- identify new retail site locations
- prepare regional health service plans
- study the effects of pollutants and epidemics on people in particular places
- work in international development agencies or tourism agencies
- provide geographical information systems support to the private and public sector
- provide advice on heritage site plans
- work with land use or socio-economic planners (for more information, see the Urban, Regional and Park Planners occupational profile)
- teach or conduct research relating to climate, landforms, soils, vegetation, transportation systems, urban structure, resources, industry or different geographical regions.

Geographers use laboratory, statistical, interview and field techniques to collect data. They often use computerized data analysis, geographical information systems, qualitative survey material or remotely-sensed imagery. For example, Geographic Information Systems (GIS) and Image Analysis Systems (IAS) technologies are used for planning and resource management.

Working Conditions

Geographers work in offices, laboratories and classrooms. Those who also conduct field studies may experience a wide variety of environments ranging from Arctic tundra to Third World countries depending on their specialization. In the field, hours of work depend on the weather and the duration of the field season.

Personal Characteristics

Geographers need the following characteristics:

- the ability to analyze and synthesize information
- strong oral and written communication skills
- problem solving skills.

They should enjoy analyzing data and finding innovative solutions to problems, consulting with others and making decisions, and taking a methodical approach to information gathering.

Educational Requirements

The minimum education requirement for geographers is a **bachelor's degree in geography**. To specialize in a particular area of geography, a master's degree or a doctoral (PhD) degree is required.

In Alberta, the following post-secondary institutions offer geography-related degree programs.

- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Bachelor of Applied Technology Geographic Information Systems degree program that includes a one year practicum. The entrance requirement is a two year diploma from a recognized Canadian college or technical institute or equivalent.
- The **University of Alberta** in Edmonton offers four year Bachelor of Arts (BA) degree programs in geography.The entrance requirement is an average from 65 to 80 per cent in English Language Arts 30-1 or English 30, a 30-level language other than English or Pure Math 30 or Math 30, and three other approved 30-level subjects (Social Studies 30 recommended). The University of Alberta also offers Master of Arts (MA), Master of Science (M.Sc.) and PhD programs in geography.
- The **University of Calgary** offers four year and five year (co-op) BA and Bachelor of Science (B.Sc.) programs in geography. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or Math 31, and three other approved 30-level subjects. The University of Calgary also offers MA, M.Sc. and PhD programs in geography, and a one year course-based Master of Geograhic Information Systems (Geography) program.
- The **University of Lethbridge** offers four year degree programs and five year combined degree programs in geography with an optional concentration in Geographical Information Science (GIS). The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or equivalent, two other 30-level subjects and a fifth Grade 12 subject. Pure Math 30 or Physics 30 may be required or recommended for courses the B.Sc. program. The University of Lethbridge also offers MA and M.Sc. programs in geography.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Geographers may be employed as environmental consultants, resource managers, urban or regional planners, geography specialists or advisors. They may work for:

- municipal, provincial or federal governments
- private consulting firms doing work on retail siting, marketing and health care planning
- organizations involved in heritage-site planning
- post-secondary institutions
- environmental research agencies
- electronic mapping and graphic design companies
- geographic information systems (GIS) groups
- organizations in the travel and tourism industry.

Geographers may specialize in areas such as climatology, environmental studies, Third World development, transportation studies or medical geography. They also may advance to supervisory or administrative positions.

Geographers are part of the larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since geographers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for geographers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary considerably depending on the geographer's responsibilities and qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

Geological and Geophysical Technologist

Produced OCTOBER 2004

Geological and geophysical technologists may work independently or with a team of geologists, geophysicists, mining engineers or petroleum engineers.

NOC Number(s): 2212.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I d**

Duties

Geological and geophysical technologists may work in exploration, production or management.

In exploration, they:

- prepare base maps
- interpret geological data from aerial photos
- organize and conduct geophysical and geochemical surveys
- prepare or supervise the preparation of samples and perform laboratory tests
- prepare, transcribe and analyze data
- interpret data and report results
- interpret well log and core data for cross-sections and geological maps
- use computers to record and process geological and seismic data and prepare maps
- assist with two, three and four dimensional studies and interpretations
- link all available data, including seismic and well data, to create geologic maps
- interpret hydrogeological maps, reports and studies.

In production, they:

- prepare and maintain subsurface and surface survey plans
- conduct mineral grade control studies and maintain databases
- conduct soil and groundwater field tests
- monitor contaminant migration and dispersion
- determine acquifer characteristics and water quality
- recommend environmental assessment and remediation techniques
- supervise equipment operators and other technologists.

In management, they:

- maintain geological and geophysical databases for resource companies
- prepare cost and budget estimation for various resource projects
- supervise logistical manoeuvers related to exploration programs.

In addition to these general duties, **geological technologists** may:

- analyze core samples from drilling
- supervise water well exploration, drilling and well completions
- help evaluate possible mining locations
- assess the environmental impact of development projects on subsurface materials.

In addition to the general duties listed above, **geophysical technologists** may:

- take and record magnetic, electromagnetic, gravity and resistivity measurements
- conduct or direct geophysical prospecting field trips, exploratory drilling, well logging programs and seismic crew operations

- operate and maintain geophysical survey and well logging instruments and equipment
- process seismic data, which includes operating computers to record and process seismic data, writing reports and preparing maps based on the information obtained.

Working Conditions

Geological and geophysical technologists often work in laboratories and offices that are located in major cities or field offices. Lab work can be noisy, dusty and involve the use of chemicals. Safety precautions include using earplugs and safety shoes, and working in rooms that have special ventilation systems.

Some technologists spend three to six months a year working in the field, sometimes in remote locations. They may travel for long distances and work at locations (e.g. oil and gas well sites and plants) where safety precautions are required to avoid injury. Considerable overtime and weekend work may be required.

Technologists may be required to lift equipment and samples weighing up to 25 kilograms.

Personal Characteristics

Geological and geophysical technologists need the following characteristics:

- excellent analytical and creative problem solving skills
- an aptitude for working with computers
- good organizational skills
- good oral and written communication skills
- good judgement.

They should enjoy working with instruments and equipment at tasks requiring precision, analyzing data and supervising the work of others.

Educational Requirements

(section revised MAY 2005)

In general, a related **two year technology diploma or a Bachelor of Science (B.Sc.) degree** is required to work as a geological or geophysical technologist in Alberta.

In Alberta, the following post-secondary institutions offer two year technology diploma programs:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers two year technology diploma programs with specializations in geological technology and petroleum engineering technology. The admission requirement for both programs is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30 (or 60 per cent in Math 33) and one of: Science 30, Physics 30 or Chemistry 30.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers two year technology diploma programs in exploration information technology and petroleum engineering technology. The admission requirement for both programs is a high school diploma with English 30 or 33, and Pure Math 30 or Math 30. The exploration information technology program also requires a 20 level science. The petroleum engineering technology program requires Chemistry 30, Science 30 or Physics 20.

The **University of Alberta** in Edmonton and the **University of Calgary** offer four year B.Sc.degree programs in earth and atmospheric sciences, geology and geophysics. Admission requirements vary from one program to another but generally include a high school diploma with an average of at least 70 per cent in English 30, Math 30, Chemistry 30, and two other appropriate Grade 12 subjects (Math 31 and Physics 30 recommended).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary.

The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Geological and geophysical technologists are employed by:

- oil and gas companies
- resource service companies
- engineering consulting firms
- mining companies
- environmental consulting companies
- environmental equipment and technology companies
- government departments and agencies.

Experienced geological and geophysical technologists may advance to supervisory and management positions.

Geological and geophysical technologists are part of the larger National Occupational Classification 2212: Geological and Mineral Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 3,600 Albertans are employed in the Geological and Mineral Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since geological and geophysical technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for geological and geophysical technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geological and Mineral Technologists and Technicians occupational group working part-time or full-time earned from **$21,300 to $117,000 a year.** The average salary was **$56,700 a year.**

For more detailed information, see ASE - Annual Salary Surveys.

Geologist

Produced JUNE 2004

Geologists study the nature and history of the Earth's crust and apply their knowledge in exploring for minerals and hydrocarbons (e.g. oil and gas), developing resources for production, building engineering foundations and stable slopes, finding and evaluating ground water supplies and conducting environmental investigations.

NOC Number(s): 2113
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Geologists often work in teams with geophysicists (see the Exploration Geophysicist occupational profile), engineers (see the Petroleum Engineer and other engineering occupational profiles) and technologists (see the Geological and Geophysical Technologist occupational profile).

In general, geologists:

- collect and interpret rock samples and cores
- classify fossilized life forms, rocks and minerals
- collect and analyze soil and sediment samples in geochemical surveys
- study the effects of erosion, sedimentation and tectonic deformation
- record and interpret geological information from maps, reports, boreholes, well logs, sample repositories, air photos, satellite imagery, geochemical surveys and other sources
- conduct geological surveys and field studies
- participate in the study and mitigation of natural disasters such as earthquakes, volcanos and mud slides
- prepare geological maps, cross-sectional diagrams and reports from field work and laboratory research
- supervise the work of technologists and technicians.

During the various stages of their work, geologists use a wide variety of instruments including hammers, diamond drills, geopositioning devices, gravity meters, microscopes, spectroscopes and x-ray diffraction equipment. They work with computers, both in the field and in the office. They also need to be familiar with the fundamentals of science from chemistry, physics, biology and mathematics.

Geologists may work in a variety of areas:

- **Coal geologists** locate and characterize coal resources and determine their suitability for coal mining and coal bed methane (gas) development.
- **Computing geologists** develop software applications (for example, database systems, geographic information systems, statistics packages) and use them to analyze data and information.
- **Economic geologists** locate, evaluate and characterize mineral deposits.
- **Engineering geologists** analyze geological data to advise government agencies and construction companies on the suitability of locations for buildings, dams, highways, airfields and tunnels. They also work with other engineers in oil and gas and mineral exploration and production and in environmental clean-ups.
- **Environmental geologists** assess the environmental impact of the development or use of mineral, hydrocarbon (oil, gas, coal) and water resources, and assist in restoring disturbed land back to its original condition or to a more valuable land use (reclamation).
- **Geochemists** study the chemical makeup of minerals, rocks and fluids and their interactions to understand the distribution and migration of materials in the earth's crust.
- **Geochronologists** determine the ages of rocks by studying the radioactive decay of key elements.
- **Geomorphologists** examine landforms and processes that cause the earth's surface to change (for example, erosion and glaciation).

- **Hydrogeologists** study the properties, amount and composition of groundwater and formation waters. They may search for potable water or be involved in environmental issues such as groundwater contamination, landfill siting or liquid waste disposal by deep injection. For more information, see the Hydrologist occupational profile.
- **Marine geologists** study coastal and marine environments and their evolution, and investigate ocean basins for mineral and petroleum potential.
- **Mineralogists** analyze, identify and classify minerals and precious stones according to their composition and structure, study the properties of minerals and develop industrial and environmental uses.
- **Mining geologists** locate, analyze and study the Earth's mineral and rock resources with a view to their efficient and safe exploitation.
- **Paleontologists** study fossils for a variety of purposes (e.g. establishing relative age, petroleum exploration, the study of evolution and ancient environments).
- **Petroleum geologists** use information gathered from boreholes, geophysical and geochemical data, geological maps, rock samples and remote sensing imagery to decide where to drill for oil and gas, and help petroleum engineers to optimize the extraction process by determining the geological characteristics of an underground reservoir and the fluids in it.
- **Planetary geologists** study the nature and history of planets and satellites in the solar system.
- **Sedimentologists** study the processes that result in the formation of sedimentary rocks and apply this knowledge to help locate coal, petroleum and other types of mineral resources.
- **Stratigraphers** study arrangements of sedimentary rock layers by examining the fossil and compositional content of boreholes and diamond-drill cores to help locate coal and petroleum.
- **Structural geologists** study the geometry and elements of brittle and plastic rock deformation, including the evolution of mountain-building and Earth structures useful in resource extraction.
- **Surficial geologists** study sediments and rock layers close to the Earth's surface. Their findings are used in road and building construction, landfill siting, mineral exploration, environmental contamination, groundwater production and global change studies.
- **Volcanologists** study active and dormant volcanoes to predict eruptions and minimize potential damage and to learn about the physics and chemistry of volcanic processes.
- **Well site geologists** work closely with drilling crews in the field to help ensure that wells penetrate target zones and coring samples are taken at required intervals.

Working Conditions

Most geologists in Alberta work in the energy industries and spend much of their time working in office environments. However, field work is commonly required as part of educational and professional development activities. A few geologists spend three to six months each year doing field work, living and working in remote areas and covering large areas by foot, all-terrain vehicle, boat, helicopter or airplane. Mining geologists may work underground part of the time. Considerable travel is required for geolgists involved in international exploration.

Physical requirements for geologists vary greatly depending on the nature of the work. Geologists working in laboratories may do little or no significant lifting; those collecting samples in the field may be required to lift items weighing up to 25 kilograms. Collecting samples may also involve covering considerable distances on foot.

Personal Characteristics

Geologists need the following characteristics:

- good communication skills
- an open, inquiring, analytical mind
- an aptitude for mathematics and science
- excellent decision-making skills
- the ability to visualize three-dimensional objects from two-dimensional drawings
- the ability to work well in a team environment.

They should enjoy being outdoors working in the field, doing work that requires precision and developing innovative approaches and taking charge of situations.

Educational Requirements

The minimum education requirement for geologists is a **bachelor of science (B.Sc.) honours degree in geology**. Ongoing professional development is required to keep up to date.

- The **University of Alberta** in Edmonton offers a four year B.Sc. degree program in geology as well as honours and specialization programs in geology and paleontology, a Master of Science (M.Sc.) degree program and a doctoral (PhD) program. The admission requirement for the bachelor's degree programs is a high school diploma with an overall average of at least 70 per cent in English 30, Pure Math 30, Chemistry 30, Physics 30 and one other approved Grade 12 subject (Biology 30 is required for the paleontology program). The University of Alberta also offers a one year diploma program in exploration geology for people who already have a four year bachelor's degree in geology, geophysics or mineral engineering plus some industrial experience.
- The **University of Calgary** offers four year B.Sc. degree programs in geology and in applied and environmental geology as well as master's and doctoral degree programs in geology. The admission requirement for the bachelor's degree programs is a high school diploma with an overall average of at least 70 per cent in English 30, Pure Math 30, Chemistry 30, one of Biology 30, Physics 30 or Math 31, and one of Social Studies 30, a 30-level science, a 30-level language or a five credit Grade 12 subject (Math 31 and Physics 30 are recommended).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Geologist or a Professional Geophysicist. You do **not** have to be registered if you work under the direct supervision of a Professional Geologist or a Professional Geophysicist and do not call yourself a Professional Geologist or Professional Geophysicist.

Employment and Advancement

(section revised JANUARY 2006)

Geologists are employed by:

- consulting firms
- resource, exploration, engineering and environmental companies
- government departments and agencies
- science centres and museums.

A B.Sc. degree is required for entry level positions. Advanced degrees are required for positions of greater responsibility including research and post-secondary teaching positions.

Geologists are part of the larger National Occupational Classification 2113: Geologists, Geochemists and Geophysicists. In Alberta, most people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,350 Albertans are employed in the Geologists, Geochemists and Geophysicists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since geologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for geologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geologists, Geochemists and Geophysicists occupational group working part-time or full-time earned from **$37,900 to $159,600 a year.** The average salary was **$71,700 a year.**

Geomatics/Surveying Engineer

Produced JULY 2004

Geomatics/surveying engineers gather, model, analyze and manage spatially-referenced data (information identified according to location).

NOC Number(s): 2131
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I O D

Duties

Geomatics engineers use terrestrial, marine, airborne and satellite sensors to gather data and develop information systems suitable for land use planning and landscape analysis. For example, they may acquire and integrate data for:

- spatial referencing networks for environmental monitoring
- deformation analysis
- legal boundary delineation
- precise engineering surveys, scientific studies and topographic mapping
- real-time and post-mission data acquisition in support of positioning and navigation
- the development and implementation of Geographic Information Systems and GIS software applications.

Geomatics engineers use measurement-related technologies such as:

- satellite-based positioning
- Inertial Navigation Systems (INS)
- aerial photography and laser profiling
- multispectral data collection and analysis
- industrial metrology
- computer hardware, software and firmware and related data acquisition system interfacing
- electronic distance, angle and height measurement and calibration
- digital cartography and GIS.

The data collected is made available either in the form of digital data repositories, conventional maps, GIS or attributed co-ordinate lists.

Geomatics engineers may specialize in areas such as the following:

Geodetic engineers are global surveyors involved in:

- establishing a global net of reference points by satellite and other extraterrestrial positioning methods
- determining the geoid (the basic reference surface for heights) from gravity and satellite altimetric measurements
- monitoring movement in the earth's crust and measuring variations in the shape and gravity field of the Earth
- establishing positions and water levels on the sea using satellite and radio positioning methods.

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, contours and other natural or human-made features (for more information, see the Land Surveyor occupational profile).

Navigation and positioning engineers:

- use navigation systems (e.g. GPS, INS) for positioning, navigating, guiding and controlling air, land and sea vehicles
- design and write custom software to integrate various hardware systems
- develop user interfaces for navigation and guidance systems.

Photogrammetric and remote sensing engineers:

- use aerial photography and other digital remote sensing techniques to collect information about specific features of the earth

- direct the overall planning and development of mapping projects
- determine aerial photographic and remote sensing requirements and the type of acquisition and plotting equipment to be used
- determine the aerial photography and remote sensing techniques and computer software needed to meet the required standards of accuracy
- generate maps based on the information collected.

Geographic information systems engineers:

- organize different types of position-related information into consistent databases
- develop software and analysis tools for using this information in urban planning and management, resource exploration, environmental management and land use studies.

Working Conditions

Geomatics engineers may work in offices and laboratories, or in the field, often in remote areas. Field work for land surveyors is usually performed by survey technicians. Experienced engineers generally spend more time in an office environment. In the field, they may be required to lift equipment weighing up to 25 kilograms.

Personal Characteristics

Geomatics engineers need the following characteristics:

- mathematical ability
- the ability to analyze spatial problems and measurements
- good communication skills.

They should enjoy being innovative, doing work that requires precision, making decisions and supervising people, and having variety in their work.

Educational Requirements

Geomatics engineers must have and be able to integrate knowledge about:

- statistical analysis
- measurement processes
- cartography
- map projections
- information theory
- computer science.

The minimum education requirement is a **four year bachelor's degree with a specialization in geomatics engineering**.

In Alberta, the **University of Calgary** offers a four year Bachelor of Science (B.Sc.) degree program in geomatics engineering. The minimum admission requirement is a high school diploma with an average of at least 70 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

There are student quotas for admission into the Faculty of Engineering so higher marks are often required to gain entry to these programs.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Geomatics engineers work for:

- survey firms
- engineering and other high-tech companies
- building contractors
- petroleum and mining companies
- remote sensing companies
- geographic information companies and software developers
- computer graphics companies
- public utilities
- municipal, provincial and federal departments of transportation, surveying and mapping.

Experienced geomatics engineers may become supervisors or administrators. Opportunities for advancement are particularly good for experienced geomatics engineers who have a sound technical background coupled with managerial abilities.

Geomatics/surveying engineers are part of the larger National Occupational Classification 2131: Civil Engineers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,950 Albertans are employed in the Civil Engineers occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since geomatics/surveying engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for geomatics/surveying engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Civil Engineers occupational group working part-time or full-time earned from **$22,900 to $152,900 a year.** The average salary was **$77,400 a year.**

© Government of Alberta, Human Resources and Employment

Geomatics/Surveying Technologist

Produced JUNE 2004

Geomatics technologists conduct or participate in field surveys, office calculations and plan production to determine the exact locations and relative positions of natural features and man-made structures on the earth's surface, underground or underwater.

NOC Number(s): 2254.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

In general, geomatics technologists:

- stake out buildings and other structures such as bridges, dams, tunnels, refineries and other engineering works
- perform calculations and field layouts of horizontal, vertical and spiral curves when conducting detailed surveys on projects such as highways, urban streets and railways
- conduct underground, open pit and tunnel surveys and produce plans from these surveys
- do hydrographic surveys of shoreline and off-shore, subsurface contours
- survey subdivisions, roads, rights-of-way, mineral claims and well sites
- conduct field surveys for new townships and sections of land to establish or re-establish legal survey boundaries
- research land titles, legal survey plans, aerial photographs, satellite imagery, geographical databases and other relevant information for planning surveys
- plan and conduct control surveys for mapping purposes
- create and process digital databases to compile geographic information in numerical and graphical formats
- use geographic information systems (GIS) and remote sensing for spatial analysis
- prepare proposed and as-built plans using electronic field data collection and computer graphic methods
- extract survey and thematic information from remotely sensed imagery
- use global positioning systems (GPS) to monitor earth orbiting satellites to determine geographic positions.

In the course of their work, geomatics technologists use a wide variety of surveying and computer equipment including electronic distance measuring instruments and global positioning systems, geographic information systems and digital mapping systems.

Working Conditions

Geomatics technologists work alone and in teams with land surveyors, engineers and other technologists. They work indoors, often using computers to compile and analyze data, and outdoors in all weather conditions conducting surveys.

Extensive travelling may be required, sometimes to remote areas. Some lifting up to 25 kilograms is required.

Personal Characteristics

Geomatics technologists need the following characteristics:

- an aptitude for mathematics
- the ability to think visually about geometric forms
- the ability to perceive pertinent detail in objects and drawings
- good communication skills
- the observation skills, physical fitness and endurance required for field work.

They should enjoy working outdoors with equipment and instruments at tasks requiring precision, analyzing information and finding innovative solutions to problems, taking a methodical approach to their work and supervising and co-ordinating the work of others.

Educational Requirements

The recommended educational background for geomatics engineering technologists is a **two year diploma in geomatics technology**. It is possible to learn on the job and take related courses part-time, but not common.

In Alberta, the following institutions offer two year diploma programs in Geomatics Engineering Technology.

- **Lethbridge Community College**. The entrance requirement is a high school diploma or equivalent with Math 30 or Pure Math 30 (or 65 per cent in Math 33 or Applied Math 30) and Physics 20, and a basic understanding of computer technology.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Math 30 (or at least 60 per cent in Math 33) and one of: Science 30, Physics 30 or Chemistry 30. An interest in and aptitude for applied sciences, especially those with a physics base, are definite assets.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary. The admission requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30, and Science 30 or Physics 20.

Continuing education programs often are offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Geomatics technologists are employed by:

- engineering and legal survey firms
- aerial photographers
- mapping companies
- seismic services companies
- natural resource companies
- government departments
- utility companies
- construction companies
- survey instrument suppliers.

Geomatics technologists may advance to supervisory positions in which they are responsible for other technologists, or move into data processing, drafting or cartography positions. Additional education and training are required to become a Land Surveyor (for more information, see the Land Surveyor Occupational Profile).

Geomatics/surveying technologists are part of the larger National Occupational Classification 2254: Land Survey Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 650 Albertans are employed in the Land Survey Technologists and Technicians occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since geomatics/surveying technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for geomatics/surveying technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Land Survey Technologists and Technicians occupational group working part-time or full-time earned from **$21,500 to $101,900 a year.** The average salary was **$43,000 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

© Government of Alberta, Human Resources and Employment

Geriatric Medicine Specialist

Produced DECEMBER 2004

Geriatric medicine specialists are physicians who specialize in preventing, diagnosing and treating diseases and disorders in older people. They work with others in health care teams to restore ill and disabled older people to their optimal level of ability and, where possible, return them to independent life at home.

NOC Number(s): 3111.1
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I S D

Duties

Geriatric medicine specialists are experts in organizing and providing health care for older people. In general, they:

- apply their knowledge of aging, clinical problems of the elderly and special features of disease in the aged to make accurate diagnoses in frail seniors
- apply their knowledge of local health, social and voluntary services and resources to design individualized care plans for the elderly
- co-ordinate their assessments with nurses, social workers, rehabilitation therapists, pharmacists, psychologists and other health care professionals
- participate in case conferences designed to share information, co-ordinate activities and plan preferred management strategies for elderly patients
- promote the maintenance of health and disease prevention for all older patients
- recommend and mobilize support services to help patients maintain their independence in the community
- confer with health and community members to ensure that health and social services are in place and serving the elderly satisfactorily
- teach physicians at the undergraduate and post-graduate levels the principles of geriatric assessment and illness management
- design research projects to study normal aging and diseases in the elderly.

Working Conditions

Geriatric medicine specialists work primarily in hospitals and clinics. They often participate in on-call rosters.

Personal Characteristics

Geriatric medicine specialists need the following characteristics:

- the intellectual ability required to successfully complete the academic training and keep up to date with new developments in geriatric medicine
- a genuine interest in the welfare of elderly patients and the ability to work with them, their caregivers and other health care professionals
- high ethical standards
- emotional strength and maturity
- good communication and teaching skills.

They should enjoy managing complex issues, co-ordinating information, dealing with people and directing the work of others.

Educational Requirements

The education and training time required is **a total of at least ten years of post-secondary education and training**. After completing at least two years of university study followed by graduation from a medical doctor (MD) program (for more information, see the Physician profile), prospective geriatric medicine specialists enrol in a post-graduate medicine program. They enter on-the-job specialty training in internal medicine for three or four years, then two years of subspecialty training in geriatric medicine. After successfully completing the program and passing national examinations for internal medicine and geriatric medicine, graduates are authorized by the Royal College of Physicians and Surgeons to call themselves Specialists in Geriatric Medicine.

Graduates of MD programs who choose to go into family practice, but wish to concentrate on working with elderly patients, can take six months to one year of extra training and receive certification in the Care of the Elderly Program. This qualifies them to act as consultants in addition to providing primary care.

The **University of Alberta** in Edmonton and the **University of Calgary** offer training programs for geriatric medicine specialists and family physicians with a particular interest in geriatrics.

Graduates of MD programs who choose to go into psychiatry but wish to concentrate on working with older patients can take an 18 month training program in geriatric psychiatry. Those who qualify act as consultants in geriatric psychiatry to other physicians.

Other Requirements

Under Alberta's Medical Profession Act, you must be a registered member of the College of Physicians and Surgeons of Alberta (CPSA) to practice medicine in Alberta.

Employment and Advancement

In Alberta, geriatric medicine specialists are employed primarily by universities and regional health authorities. They work in acute care hospitals, geriatric rehabilitation institutions and continuing care facilities. Few set up their own private practices.

Geriatric medicine specialists are part of the larger National Occupational Classification 3111: Specialist Physicians. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Geriatric medicine specialists make up a very small part of the Specialist Physicians occupational group (about 5 per cent). There is a current shortage of geriatric medicine specialists in Alberta and this shortage is forecasted to become more severe as members of the baby boom generation grow older.

Salary

Most specialists in private or group practice are paid by provincial health insurance programs according to the volume and type of services they provide. Their incomes vary widely.

© Government of Alberta, Human Resources and Employment

Gerontological Specialist

Produced NOVEMBER 2004

Gerontological specialists are professionals who specialize in working with older adults.

NOC Number(s): 4169.9
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D M

Duties

Gerontology is the study of aging processes and individuals as they grow from middle age through later life. It includes the study of physical, mental and social changes in older people as they age and changes in society resulting from an aging population.

Gerontological specialists' duties and responsibilities vary considerably from one position to another. For example, they may:

- plan, administer and evaluate programs for older adults (e.g. administer senior citizens centres, provide home support services, supervise day support programs for frail or disabled seniors)
- provide health services for older adults in hospital, continuing care and community settings
- provide or co-ordinate professional services for older adults in agencies or government departments
- provide age-related counselling and information services (e.g. retirement planning, housing, tax assistance, home support or transportation services)
- provide business-related services (e.g. financial, real estate, leisure or vacation planning) for older adults
- advise businesses on issues related to older workers and consumers (e.g. marketing strategies, purchasing power, accessibility).

The title gerontologist is generally reserved for those who have advanced degrees (master's or doctoral degrees). In general, gerontologists:

- conduct research or teach at the post-secondary level
- develop and analyze policies on issues related to older adults
- provide consultative services related to gerontology.

For information about physicians who specialize in caring for older patients, see the Geriatric Medicine Specialist profile.

Working Conditions

Gerontological specialists work in a variety of settings ranging from office environments to institutional environments to private homes. Those who work in clinical settings or who serve older adults directly (e.g. provide health or counselling services) may be required to work shifts, work some evenings and weekends, or take clients on outings in the community.

Personal Characteristics

Gerontological specialists need the following characteristics:

- the ability to integrate knowledge from a variety of disciplines into an understanding of aging and older adults
- good listening and communication skills
- the ability to work effectively in team environments that often include volunteers.

They should enjoy working with older adults, organizing and interpreting information, and developing creative solutions to problems.

Educational Requirements

Gerontological specialists usually have **post-secondary education including coursework related to aging**. Age-related issues are studied in a wide variety of disciplines including biology, education, environmental studies, ethics, health, human ecology, law, psychology, public administration, recreation, religion and sociology. Therefore, gerontological specialists come from a wide variety of professional backgrounds (e.g. nursing, social work, dentistry, recreation, law enforcement).

Degree programs in the social and health sciences are offered by universities and colleges throughout Alberta. Admission requirements vary but generally include a high school diploma with English 30 and four other 30-level subjects. For information about specific types of programs, see related occupational profiles such as Psychologist, Registered Nurse, Rehabilitation Practitioner and Social Worker.

In Alberta, the following programs are directly related to gerontological studies:

- **Grant MacEwan College** in Edmonton offers a Gerontological Nursing certificate program by distance education. Applicants must be a registered nurse, registered psychiatric nurse or licensed practical nurse who have at least a C- in a three credit health assessment course.
- **Lethbridge Community College** offers a two year Therapeutic Recreation (Gerontology) diploma program. The entrance requirement is a high school diploma or equivalent. Biology 30 and at least 65 per cent in English 30 or 33 are recommended. Immunization and a medical examination are required.
- **Mount Royal College** in Calgary offers one year certificates in Gerontology: Studies in Aging and Gerontology: Business and Entrepreneurship by distance education. These programs are designed for those who have a post-secondary diploma or degree and wish to enhance their knowledge and skills in working with older adults (e.g. social workers, mental health workers, nurses, physical and occupational therapists, business professionals and recreational, social and educational program developers).
- The **University of Calgary** offers a Master of Social Work (MSW) program with a gerontological social work concentration. The entrance requirement is an average of at least 3.00/4 in a suitable four year bachelor's degree program.

The **Alberta Centre on Aging** at the University of Alberta posts on its website a list of aging-related courses offered by universities throughout the province. The Centre also posts information about seminars and conferences.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Gerontological specialists work in public and private agencies such as:

- government departments
- universities and colleges
- hospitals and nursing homes
- housing agencies
- counselling centres
- agencies offering community programs (e.g. seniors centres, meals-on-wheels)
- businesses providing services to older adults.

Many gerontological specialists work for the same employers as other people in their first profession or discipline but they specialize in working with older adults. Their advancement opportunities are the same as for others in their field.

As members of the baby boom generation age, demand for gerontological specialists is expected to increase in Alberta.

Salary

(section revised OCTOBER 2005)

Gerontological specialists' salary ranges vary considerably depending on their responsibilities and qualifications (education and experience). Salary ranges for those who have professional qualifications are comparable to others in their profession. For information about salary levels in related occupations, see the appropriate occupational profiles (e.g. Psychologist, Registered Nurse, Rehabilitation Practitioner, Social Worker).

Glazier

Produced FEBRUARY 2006

Glaziers cut and install glass and aluminum systems for commercial, residential and automotive applications.

NOC Number(s): 7292
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: M O I

Duties

In Alberta, a journeyman in the Glazier trade may be certified as an:

- Glazier
- Auto Glass Technician.

Duties vary from one positon to another but, in general, **glaziers**:

- read and interpret drawings and specifications to determine the materials required, location of framing and procedures for installation
- measure openings for size and shape, mark and cut glass panes to fit, secure the panes in place, weatherproof joints, and assemble and install aluminum window parts
- install, fit, fabricate and attach architectural metals or related substitute products in commercial and residential buildings
- assemble parts of pre-fabricated glass units such as revolving doors, display cases, plate glass, shower doors, store fronts, automatic doors, skylights, sloped glazing, curtain walls, barrel vaults, solariums and other support structures
- install and maintain pre-fabricated glass, mirrors or glass products on walls, ceilings, fronts of buildings, handrails and walkways
- replace safety glass, windows, windshields, and glass in furniture and other products.

Auto glass technicians glaze, set, attach, install and remove glass for vehicles and off-road equipment. They also cut, prepare and fabricate flat glass for buildings and fixtures.

Working Conditions

Glaziers work in a variety of environments. Some work outdoors at construction sites, sometimes on scaffolds and swing-stages (platforms suspended from the top of highrise buildings). Others work in factories installing glass in wooden or metal frames or in shops replacing glass in vehicles or furniture. They generally work 40 hours a week, but may have to work overtime to meet deadlines. There is some risk of injury when working with sharp edges and broken glass.

Glaziers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Glaziers need the following characteristics:

- the skills to read, write and communicate verbally
- some mathematical ability
- physical strength and stamina
- the ability to work in high places
- good eyesight to measure, cut and see flaws in glass
- manual dexterity
- the ability to work independently or with a team.

They should enjoy variety and developing special skills.

Educational Requirements

To work in Alberta, glaziers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Computer skills are an asset.

The **term of apprenticeship** for:

- **glaziers** is four years (four 12-month periods) that include a minimum of 1,620 hours of on-the-job training and six weeks of technical training each year.
- **auto glass technicians** is two years (two 12-month periods) that include a minimum of 1,620 hours of on-the-job training and six weeks of technical training each year.

High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Only **glazier** apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Glaziers are employed by glass and glazing companies and contractors.

Experienced glaziers may advance to supervisory positions such as foreman or contract manager, or set up their own shops doing work for private homes and small businesses. Alberta certified journeyman glaziers who have the the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as glaziers work in the following industries:

- **Construction**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Glaziers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **glaziers** earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 65 per cent in the third and 70 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $28 an hour plus benefits** (2005 estimate).

Apprentice **glazier - auto glass technicians** earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year and 65 per cent in the second. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$14 to $20 an hour plus benefits** (2003 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Glaziers occupational group working part-time or full-time earned from **$16,700 to $54,400 a year.** The average salary was **$33,900 a year.**

Golf Professional

Produced MARCH 2005

Golf professionals teach and promote the game of golf and provide related services for golfers. Some golf professionals play tournament golf; others manage golf and recreation facilities.

NOC Number(s): 5254
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: M S i

Duties

Golf professionals are expert players who:

- teach and promote all aspects of the sport
- provide related services (e.g. golf club cleaning, storing and repair services, caddie services, club and cart rentals)
- organize club tournament operations
- assist in the administration and management of the club
- represent the club in professional or national golf activities such as golf tournaments, clinics and seminars
- direct and maintain a golf program including practice ranges and putting greens
- manage a Pro Shop, including supervising staff, and purchasing and merchandising items for sale.

Golf professionals who play in tournaments are called tournament professionals. They must be associated with the Canadian tour or another internationally recognized tour, and play a minimum number of Canadian tournaments per year.

Working Conditions

Golf professionals work indoors in golf shops and outdoors playing and teaching. They may be required to lift and carry equipment weighing up to 25 kilograms.

Golf professionals frequently work long hours during the summer months. The work can be seasonal, from early spring to late fall. However, to ensure year-round employment, some golf professionals have developed other golf-related activities (e.g. indoor teaching, making custom golf clubs, indoor driving ranges) or introduced winter sports to clubs (e.g. cross-country skiing, curling).

Tournament professionals can play year-round: in Canada during the warmer months and in the southern United States during the winter months. They must be willing to practice many hours a day.

Personal Characteristics

Golf professionals need the following characteristics:

- able to teach others
- organized
- willing to sometimes work long, irregular hours
- friendly and outgoing with a strong customer service orientation
- able to communicate and get along with all kinds of people.

They should enjoy taking a methodical approach to assembling and custom-fitting equipment, monitoring activities, teaching people and planning programs.

Educational Requirements

In addition to exceptional playing ability, golf professionals need strong business skills. Membership in the Canadian Professional Golfers' Association (CPGA) requires **three years of related post-secondary education.**

Post-secondary institutions throughout Alberta offer three and four year programs related to business management. The following offer programs directly related to golf management:

- **Grant MacEwan College** in Edmonton offers a two year Management Studies diploma program with specializations in golf operations management and professional golf management. The entrance requirement is a high school diploma with English 30 (or at least 75 per cent in English 33, or equivalent), Pure Math 30 or Math 31 (or at least 65 per cent in Applied Math 30, or equivalent) and Physics 30. A resume and proof of playing ability are also required. Golf industry experience or customer service, retail sales or hospitality industry experience are assets. The College also offers a one year Professional Golf Management post-diploma certificate program.
- **Lethbridge Community College** offers a two year Professional Golf Management diploma program. The entrance requirement is a high school diploma with English 30 or 33, and Pure or Applied Math 30, or equivalent. Male applicants must have a Royal Canadian Golfers Association (RCGA) certified handicap of six or under and submit a signed RCGA handicap card. Female applicants require a certified handicap of 14 or under. The College also offers a one year Professional Golf Management post-diploma certificate program.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Golf professionals working at facilities in Canada must:

- be members of the CPGA
- give up their amateur status
- pass a qualifying school held annually.

If applicants fail to successfully better the standard set by the CPGA, they must wait for a period of at least one to two years before they may re-apply for amateur standing.

Employment and Advancement

(section revised JANUARY 2006)

Golf professionals are employed by golf clubs, courses, driving ranges and shops. After completing the apprenticeship, it may take an individual up to ten years to secure a position as a head golf professional.

Once employed, golf professionals may advance from assistant professional to associate professional to head professional to master professional. They may move into general manager positions overseeing clubhouse operations and possibly golf course maintenance, or they may open their own driving ranges or speciality shops.

Golf professionals are part of the much larger National Occupational Classification 5254: Program Leaders and Instructors in Recreation and Sport. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,400 Albertans are employed in the Program Leaders and Instructors in Recreation and Sport occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since golf professionals form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for golf professionals.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Aspiring golf professionals must be willing to work for relatively little compensation during their first years of employment. Salaries for apprentices and assistants range from **$1,500 a** month in their first year to **$2,500 a** month in their final year. They are employed primarily during golf season (April to October), although many clubs employ golf professionals year round. Many earn additional income (**$5,000 to $10,000 a** year) by winning tournaments or providing instruction **(2004 estimates).**

Salaries for certified golf professionals vary depending on the size of the facility. Golf professionals are usually paid a retaining fee but also receive income from the operation of the Pro Shop and equipment rentals, fees from lessons and a percentage of green fees or event membership.

Initial incomes for inexperienced head golf professionals in Alberta range from **$35,000 to $50,000 per year**. Experienced head golf professionals earn **$60,000 to $80,000 per year.** Golf professionals who manage exclusive clubs may earn **up to $120,000 per year (2004 estimates).**

Grain and Forage Crop Producer

Produced FEBRUARY 2005

Grain and forage crop producers are farmers who grow grains such as wheat, barley, canola, oats, rye, flax seed, peas and speciality crops or forage crops.

NOC Number(s): 8251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M O**

Duties

Grain and forage crop producers may specialize in different types of operations. Their duties vary depending on the type of crop and the size and purpose of the operation but, in general, they:

- determine the amount and kinds of crops to be grown
- carry out or oversee the cultivation, planting, fertilizing, spraying and harvesting of crops
- load harvested crops for transport to markets
- recruit and supervise permanent or short-term staff
- market crops
- purchase farm machinery, seed and other supplies
- maintain machinery, equipment and buildings
- develop and maintain financial and production records.

Producers may grow traditional crops such as wheat, oats, barley or oilseeds (e.g. canola), pedigreed seed or specialty crops. Specialty crops are small acreage crops such as spices, specialty oats and barley, hemp, confectionary seeds, bird seed, medicinal crops or processing crops such as corn, peas, beans or carrots.

In addition to the duties listed above, specialty crop production may require:

- operating and managing specialized machines (e.g. planters, harvesters)
- highly skilled marketing
- crop-specific quality control practices.

Commercial forage crop producers plant legumes or grasses to sell as winter feed for livestock. Some specialize in one type of forage (e.g. alfalfa) which they may sell to processing plants to be dehydrated and compressed into pellets or cubes.

Working Conditions

Grain farming is a highly mechanized operation. Grain farmers must be willing to spend long and sometimes tedious days operating machinery during seeding and harvesting seasons. They also must be prepared to work in hot, dusty conditions some of the time although air-conditioned machine cabs have changed this for many.

The work is done mostly during the growing seasons, leaving more time in the winter to prepare for the next year and attend continuing education programs. However, many grain farmers supplement their operation with livestock production or forage production. Pedigreed seed-grain and forage seed growers must clean their grain and are often busy throughout the year.

Grain and forage crop producers routinely lift loads weighing up to 25 kilograms.

Personal Characteristics

Grain and forage crop producers need the following characteristics:

- excellent health with no allergies to grains or forage dust
- strength and endurance

- good organizational skills
- patience, a positive attitude and a high level of personal commitment
- good business skills
- a high degree of self-discipline
- the mechanical aptitude required to operate and service equipment.

They should enjoy taking responsibility for their operations, taking a methodical approach to their work, and driving and operating machinery and equipment.

Educational Requirements

Grain and forage crop production is a specialized, high-investment business. Producers need a good working knowledge of:

- soil and crop management
- plant nutrition
- disease and pest control
- business and financial management
- environmental issues and compliance requirements
- the market place
- machinery operation and maintenance.

Individuals may acquire the required knowledge and experience by working on farms or taking related education programs. Project management and negotiation skills are a definite asset.

The **Alberta Green Certificate Farm Training Program** through **Alberta Agriculture, Food and Rural Development** is an apprenticeship-type program that combines practical on-farm experience and training with formal education in the form of home study courses, workshops, short courses or college agricultural courses. The Green Certificate program offers three levels of training:

1. crop farm technician may require a year to complete.
2. field crop production supervisor requires two or more years to complete.
3. farm business manager requires three or more years of training.

Applicants must be at least 15 years of age and have a supportive farm trainer and job site. Trainees who are also high school students can receive high school diploma credits in an approved optional curriculum for achieving a Green Certificate.

In Alberta, the following post-secondary institutions offer related education programs:

- **Lakeland College** in Vermilion offers a two year Crop Technology diploma program. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or English 30 (or at least 65 per cent in ELA 30-2 or English 33) and Pure or Applied Math 20 (or Math 20 or 23), and one of the following: Biology 20, Chemistry 20, Physics 20 or Science 20. Lakeland College also offers an Agribusiness diploma program.
- **Lethbridge Community College** offers a two year Agricultural Technology diploma program with a specialization in plant and soil science. The entrance requirement is a high school diploma or equivalent (Math 33, Biology 30 and Chemistry 30 are recommended).
- **Olds College** offers a two year Crop and Agri-food Technology diploma program. The entrance requirement is a high school diploma or equivalent with Math 20 or 23 (or Pure Math 20 or Applied Math 20), Biology 20 and Chemistry 20 or Science 30. Olds College also offers Agricultural Production and Management, and Agricultural Business diploma programs, and a Bachelor of Applied Science degree program.
- The **University of Alberta** Faculty of Agriculture, Forestry and Home Economics in Edmonton offers four year Bachelor of Science (B.Sc.) degree programs in Agriculture, and Agricultural/Food Business Management. The entrance requirement for the Agriculture program is a high school diploma with at least 70 per cent in English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and one other approved 30-level subject. The entrance requirement for the Agricultural/Food Business Management program is completion of the first year of the Agriculture program with a GPA of at least 2.7/4.
- The **University of Lethbridge** offers four year degree programs in Agricultural Studies. The entrance requirement for the Bachelor of Arts degree program in Agricultural Studies is an average of at least 68 per cent in English 30, Math 30 or Pure Math 30 (or Applied Math 30), two other 30-level subjects plus a fifth Grade 12 subject (Biology 30 recommended). Admission to the Bachelor of Science degree program in Agricultural Studies requires Biology 30, Chemistry 30, and Math 30 or Pure Math 30 (Math 31 is recommended). The University of Lethbridge also offers post-diploma degrees in Agricultural Studies for graduates of approved agricultural diploma programs.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Other Requirements

Specialized crop producers may be required to register with an industry organization such as the Canadian Seed Growers Association.

Employment and Advancement

(section revised JANUARY 2006)

Some grain and forage crop producers own or rent land; others are employed as farm managers. The high costs of land and equipment make starting a grain operation difficult. Many young farmers take over family farms, or are part of a family co-operative operation or family corporation.

Most grain and forage crop producers do not rely solely on one type of crop for income. For example, forage crops may be rotated with grain production, or hay and grain may be produced for livestock consumption.

For those seeking work on large farms as labourers, technicians, supervisors or managers, local Human Resources Canada offices are helpful in bringing together farmer-employers and potential employees.

Grain and forage crop producers are part of the larger National Occupational Classification 8251: Farmers and Farm Managers. In Alberta, over 75 per cent of people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 35,950 Albertans are employed in the Farmers and Farm Managers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. (**Note**: Since grain and forage crop producers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for grain and forage crop producers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Annual incomes for grain and forage crop producers **vary greatly** depending on the type of operation, current market prices, weather conditions and operating expenses. The timing of seeding and harvesting can mean the difference between profit and loss.

Managers' salaries often vary according to business size.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Farmers and Farm Managers occupational group working part-time or full-time earned from **$16,200 to $83,200 a year.** The average salary was **$39,000 a year.**

Graphic Designer

Produced MAY 2005

Graphic designers translate verbal and abstract concepts into meaningful visual communication.

NOC Number(s): 5241.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M S**

Duties

Graphic designers focus primarily on print media such as brochures, packaging, promotional materials and annual reports. For information about designers who work primarily in electronic media, see the Interactive Media Developer and Web Designer occupational profiles.

Graphic designers are problem-solvers who research and manage visual design projects. In general, they:

- consult with clients and other professionals to establish a project's goals and objectives, target market, budget and schedule
- analyze needs/problems and develop visual solutions
- prepare concept presentations for client approval, ranging from simple sketches to full colour layouts
- develop approved concepts in consultation with clients
- prepare artwork or digital files for production
- direct photographers, illustrators and other creative professionals involved in the project
- co-ordinate the production of print, electronic or audio-visual media.

Graphic designer may produce design products such as:

- trademarks, corporate logos and brand logos
- stationary and corporate identity materials
- annual reports and investor relations materials
- packaging and image design for consumer products
- advertisements
- promotional posters
- sign and wayfinding systems
- film and video graphics
- diagrams, maps and graphs
- publication design for books and magazines
- flyers, brochures and promotional literature.

On smaller projects, the design process may take days or weeks; larger, more complex projects can take months to complete. Most design studios have the capacity to produce everything from the initial concept to finished artwork for reproduction. Some designers concentrate on a particular aspect of the design process (e.g. design concept, layout production) or on a particular type of product (e.g. corporate identity, marketing communications, packaging design).

Working Conditions

Self-employed graphic designers divide their time between studio work and meeting with clients, photographers and other professionals involved in the design process. Some travel may be required.

Designers employed by advertising companies or design studios spend most their time in the studio, occasionally attending meetings with clients. Account executives may work as liaisons between clients and designers.

It is not uncommon for graphic designers to work long hours to meet project deadlines.

Personal Characteristics

Graphic designers need the following characteristics:

- the ability to work effectively in a team environment
- the ability to interpret client needs and develop creative graphic solutions
- drawing ability
- strong writing and oral presentation skills
- good listening and analytical skills
- the ability to pay close attention to details
- good negotiating and marketing skills
- the ability to learn from constructive criticism
- good organizational skills
- the ability to deal with the pressure of constant deadlines
- a willingness to keep up to date with new developments in the graphic design field.

They should enjoy synthesizing information and finding innovative ways to present ideas, taking a methodical approach to tasks requiring precision (e.g. preparing specifications, estimating costs) and consulting with people.

Educational Requirements

Most graphic designers have post-secondary education in visual communications or graphic design. Developing a strong portfolio of work is essential for finding employment as a graphic designer. Computer skills are a definite asset. The Society of Graphic Designers of Canada recommends a three or four year program in visual communications or graphic arts.

In Alberta, the following post-secondary institutions offer programs related to graphic design:

- **Alberta College of Art and Design** in Calgary
- **DevStudios** in Edmonton
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **HCC Choice College** in Spruce Grove
- **Keyano College** in Fort McMurray
- **Lethbridge Community College**
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Network Learning Masters** in Edmonton
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Red Deer College**
- **Southern Alberta Institute of Technology (SAIT)** in Calgary
- **Sprott-Shaw Community College** in Calgary
- **University of Alberta** in Edmonton
- **University of Lethbridge**.

Entrance requirements vary considerably. Admission to diploma and degree programs is competitive and generally requires a high school diploma with a minimum average (ranging from 60 to 80 per cent) in English Language Arts 30-1 and four other Grade 12 courses (e.g. Pure Math 30, Social Studies 30, a 30-level language other than English, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a Grade 12 fine arts subject) or equivalent. Applicants also must submit a portfolio. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Graphic designers may work for:

- corporate and government communications or public relations departments
- graphic design studios
- film and television studios
- advertising agencies

- multimedia companies
- hospitals and other institutions
- industrial designers
- book publishing firms
- architectural firms (signage)
- printers
- newspapers and magazines.

Graphic designers are part of the larger National Occupational Classification 5241: Graphic Designers and Illustrators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 6,950 Albertans are employed in the Graphic Designers and Illustrators occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since graphic designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for graphic designers.)

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Graphic Designers and Illustrators occupational group working part-time or full-time earned from **$15,800 to $92,600 a year.** The average salary was **$37,200 a year.**

© Government of Alberta, Human Resources and Employment

Greenhouse Operator

Produced DECEMBER 2003

Greenhouse operators plan, organize and direct the activities of greenhouse staff who propagate, grow and market flowers and other plants or produce.

NOC Number(s): 8254
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M S**

Duties

Greenhouse operators run wholesale and retail horticultural firms ranging in size from small family businesses to operations employing over fifty people. They may deal with all kinds of plants and produce, or specialize in a particular type. Their duties and responsibilities therefore vary but, in general, greenhouse operators:

- determine the type and quantity of plants to grow or stock (e.g. cut or potted flowers, bedding plants, vegetables, plant varieties)
- determine the environmental conditions required to grow the selected plants and set planting and care schedules accordingly
- design, install, maintain and program environmental control and irrigation systems
- supervise staff in planting, transplanting, pruning, feeding and spraying plants
- identify and control problems caused by insects, rodents, plant diseases or nutritional deficiencies
- operate and maintain carbon dioxide generators, ultraviolet sterilizers, water treatment machines and related equipment
- develop marketing plans
- provide information about plant selection and care for customers
- order equipment and supplies
- hire, train and supervise staff
- prepare and adhere to budgets and maintain records
- keep up to date regarding new technologies and techniques (e.g. biological crop protection, recirculation systems, new plant varieties)
- ensure compliance with applicable provincial and federal regulations regarding food safety and the handling, use, storage and disposal of pesticides.

In smaller operations, greenhouse operators may also do some of the hands-on work in greenhouses:

- prepare soil for planting, plant bulbs, seeds and cuttings, graft plants, transplant seedlings and rooted cuttings, and train and prune plants
- remove weeds, spray plants with pesticides and apply fertilizers
- position and regulate greenhouse irrigation systems to water plants
- set up irrigation systems in soil-less growing media
- maintain boilers, furnaces and fans
- construct greenhouses and benches.

Working Conditions

Greenhouse operators usually work indoors in greenhouses and offices, although they may also work outdoors in shade houses. They often work long, irregular hours, particularly in the spring and summer months. Those who work in greenhouses that operate on a year-round basis may experience different busy periods. The work can be hectic at times and satisfying customer needs can be stressful.

Personal Characteristics

Greenhouse operators need the following characteristics:

- creative problem solving skills
- decision-making skills
- manual dexterity
- no severe allergies to plants, pollen, pesticides or other chemicals
- patience
- an eye for detail.

Those in retail operations must also be able to deal courteously and effectively with the public.

Greenhouse operators should enjoy directing the work of others, organizing greenhouse operations and providing information to customers.

Educational Requirements

(section revised JULY 2004)

In the past, many greenhouse operators worked their way up to supervisory positions by learning on the job and taking related courses. However, graduates of post-secondary education programs in horticulture generally have a better chance of advancing to supervisory and management positions than those who do not have related post-secondary education.

In Alberta, the following institutions offer horticulture-related programs:

- the **Northern Alberta Institute of Technology** in Fairview offers a one year Horticulture Technician certificate program with a specialization in horticultural management. The program includes 16 weeks of work experience. The entrance requirement is a high school diploma with Grade 11 English, science and math.
- **Medicine Hat College** offers a one year Horticultural Technician certificate program with a specialization in production or ornamentals. The program includes two practicums and 120 hours of work experience. The entrance requirement is a high school diploma or equivalent with at least 55 per cent in Grade 12 English and Grade 11 math (pure or applied), biology and chemistry.
- **Olds College** offers:
    - a two year Horticulture diploma program with a specialization in greenhouse management. The entrance requirement is a high school diploma or equivalent with at least 55 per cent in Grade 12 English, Chemistry 20, Biology 20, and Pure or Applied Math 20 (or equivalent).
    - a post-diploma Bachelor of Applied Horticulture degree program with a specialization in production horticulture. The entrance requirement is a diploma or degree in a closely-related area and at least four months of experience in the horticulture industry.
    - related distance education programs.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Short courses and workshops in horticulture are also offered by the **Alberta Greenhouse Growers Association** and **Alberta Agriculture, Food and Rural Development** at Crops Diversification Centres in the north (Edmonton) and south (Brooks).

Other Requirements

Depending on the type of operation, greenhouse operators who work with pesticides may require a Greenhouse Alberta Pesticide Applicator Certificate from the Pesticide Management Program at Lakeland College. Those who sell pesticides must hold a Pesticide Applicator Certificate, Commercial Pesticide Dispenser Certificate or a Lawn and Garden Pesticide Dispenser Certificate (or employ at least one staff member who has the appropriate certificate).

The Canadian Nursery Landscape Association has a national certification program for retail garden centre and nursery production employees. Members who wish to be certified must have at least 2,000 hours of industry experience (up to 1,000 hours credit given for related education), and pass a written examination and practical skills tests.

Employment and Advancement

(section revised JANUARY 2006)

Greenhouse operators may be self-employed or employed as greenhouse or garden centre managers. Most work in the wholesale or retail industry; some work for government departments or research centres.

Greenhouse operators generally start in junior positions and work their way up (or start their own businesses). Greenhouse positions may be full-time, part-time or seasonal. Advancement depends on performance and the availability of supervisory positions. Opportunities for advancement beyond the greenhouse operator level are limited.

Greenhouse operators are part of the larger National Occupational Classification 8254: Nursery and Greenhouse Operators and Managers. In Alberta, most people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Nursery and Greenhouse Operators and Managers occupational group, which is expected to 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since greenhouse operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for greenhouse operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings for greenhouse operators vary considerably, particularly for those who are self-employed.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Nursery and Greenhouse Operators and Managers occupational group earned **up to $66,000 a year**. Those with three years of experience earned from **$21,100 to $52,800 a year.** The average salary was **$29,200 a year**.

Guest Services Attendant

Produced MARCH 2003

Guest services attendants provide personal services for hotel guests.

NOC Number(s): 6672.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O S M**

Duties

Duties and responsibilities vary from one position to another but, in general, guest services attendants:

- greet and escort guests to their rooms
- transport luggage by hand or on a cart
- ensure that guests are comfortably settled in their rooms, including checking room ventilation, heating, lighting and supplies such as towels and linen, and explaining how the night lock, television and telephone systems work.

Depending on the establishment, they may also:

- promote hotel services and facilities
- answer questions about local entertainment, dining and recreational facilities
- transport luggage for large tour groups
- deliver messages and mail
- run errands within the hotel or very nearby
- maintain a clean lobby/entrance area
- act as part of the security team
- act as a doorperson or hotel greeter
- park guests' vehicles
- operate the hotel courtesy shuttle service.

Working Conditions

Guest services attendants work shifts, including weekends and holidays. In the winter months, they may spend a considerable amount of time outside helping guests with their luggage. Lifting up to 25 kilograms is required.

During peak travel seasons, the work can be hectic but also more financially rewarding. Guest services attendants may be required to wear tailored uniforms.

Personal Characteristics

Guest services attendants need the following characteristics:

- pleasant, outgoing personality
- conservatively groomed and neat
- tactful and courteous,
- good English speaking skills
- good physical condition.

They should enjoy handling luggage, helping guests, and having clear rules and guidelines for their work.

Educational Requirements

(section revised OCTOBER 2005)

There are **no specific educational requirements** to become a guest services attendant, but a high school education improves an attendant's chances for advancement. Establishments that offer valet or shuttle services require job applicants to have a valid class four or five Alberta operator's license and a clean driving record. Knowledge of directions to local attractions is a definite asset. Training is on the job.

Alberta Tourism Education Council (ATEC) has developed a process for guest services attendants to demonstrate their skills and write an examination to earn a certificate that is recognized across Canada in the tourism and hospitality industry.

Employment and Advancement

(section revised JANUARY 2006)

Guest services attendants are employed in hotels. In resort areas, employment may be seasonal.

Guest services attendant positions are often filled by other hotel employees or by guest service attendants who have experience in other establishments. Employers are generally careful to check previous work records and character references to ensure that applicants are honest and have personal integrity.

Experienced guest services attendants can move into other hotel positions such as front desk clerk or concierge (manager of guest services).

Guest services attendants are part of the larger National Occupational Classification 6672: Other Attendants in Accommodation and Travel. In Alberta, over 75 per cent of people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Other Attendants in Accommodation and Travel occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since guest services attendants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for guest services attendants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Guest services attendants' earnings vary depending on the location, size and type of hotel in which they are employed. In general, guest services attendants are paid **at or just above the minimum wage rate.** Tips may provide a significant amount of additional income.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Attendants in Accommodation and Travel occupational group working part-time or full-time earned from **$11,000 to $27,500 a year.** The average salary was **$24,300 a year.**

Hairstylist

Produced FEBRUARY 2006

Hairstylists cut and style hair to suit the client's face and lifestyle.

NOC Number(s): 6271.1
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **I O S**

Duties

Duties vary from one position to another but, in general, hairstylists:

- shampoo, cut, trim, colour, wave and style hair, wigs and hairpieces
- shave, trim and shape beards and moustaches
- suggest appropriate styling aids or hairstyles
- analyze hair and scalp and suggest treatment.

Hairstylists must keep their station clean and organized. Scissors, combs and brushes and clippers must be sterlized and kept in good working condition. Those who own or manage a salon:

- order supplies, pay bills and keep records
- hire and supervise employees
- encourage staff to learn new skills.

Working Conditions

Hairstylists work indoors in a clean environment. They must stand all day and sometimes work through their breaks. They may be required to work weekends and evenings and put in extra hours at peak times.

Personal Characteristics

Hairstylists need the following characteristics:

- good customer service skills
- physical stamina
- the ability to keep up to date with new hair fashions, supplies and changing technology
- professional appearance.

Educational Requirements

To work in Alberta, hairstylists must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice.

The **term of apprenticeship** is two years (two 12-month periods) that include a minimum of 1,400 hours of on-the-job training and ten weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Hairstylist apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Marvel College in Edmonton
- Delmar College of Hair Design Ltd. in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Academy of Professional Hair Design,** a private vocational school in Red Deer, offers a 40-week Beauty Culture program. The entrance requirement is a high school diploma or equivalent.
- **Artists Within,** a private vocational school in Calgary, offers a full-time (eight weeks) and a part-time (16 weeks) Hair Design program. Applicants must be 19 years of age or have a high school diploma or equivalent.
- **Delmar College of Hair Design**, a private vocational school in Calgary, offers a 36-week Hairstylist program. The entrance requirement is a high school diploma or equivalent.
- **Est-Elle Academy of Hair Design,** a private vocational school in Edmonton, offers a 39-week Beauty Culture program.
- **G.P. Hair Academy,** a private vocational school in Grande Prairie, offers a 40-week Hairstyling program. The entrance requirement is at least 33 credits with Grade 10 English, Math and Science or equivalent.
- **HCC Choice College**, a private vocational school in Spruce Grove, offers a 48-week Hair Design and Cosmetology program.
- **L.A. School of Hair Design,** a private vocational school in Lethbridge, offers a 37-week Beauty Culture program. The entrance requirement is at least 33 credits with Grade 10 English and Math or equivalent.
- **Marvel College**, a private vocational school in Calgary, Edmonton and Red Deer offers a 37-week Hairstyling program. The entrance requirement is a high school diploma or equivalent.
- **Master's School of Hair Design**, a private vocational school in Medicine Hat, offers a 39-week Beauty Culture program. The entrance requirement is Grade 10 or equivalent. Applicants must also be at least 16 years of age.
- **Northern Lights Academy of Cosmetology,** a private vocational school in Grande Prairie, offers a 40-week Hairstylist program. The entrance requirement is Grade 10 or equivalent, a résumé, two letters of reference and a personal letter. Applicants must also be at least 17 years of age.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Most hairstylists work in beauty salons. Employment opportunities are concentrated in large- and medium-sized urban areas although many smaller communities support small salons. Part-time work is more common than in most other occupations.

Hairstylists can move into other areas such as colour or permanent wave technician demonstrating new techniques at hair shows or in salons to staff, estheticians or nail technicians. A hairstylists may also become a salesperson for a beauty supply house.

Advancement is usually limited to managing a salon or owning and operating one's own establishment. Alberta certified journeyman hairstylists who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Hairstylists are part of the larger National Occupational Classification 6271: Hairstylists and Barbers. In Alberta, most people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,850 Albertans are employed in the Hairstylists and Barbers occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 190 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since hairstylists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for hairstylists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice hairstylists earn at least minimum wage. Usually the pay increases as the training progresses. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$10 to $17 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Hairstylists and Barbers occupational group working part-time or full-time earned from **$11,100 to $82,400 a year.** The average salary was **$26,800 a year.**

Hazardous Waste Management Technologist

Produced SEPTEMBER 2005

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

NOC Number(s): 2263
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Hazardous waste management involves preventing and reducing the use of hazardous materials, reducing or eliminating the production of hazardous waste, reusing materials and disposing of hazardous waste safely.

Duties and responsibilities vary from one position to another but, in general, hazardous waste management technologists:

- survey commercial and municipal organizations to investigate waste systems and disposal methods
- collect representative samples of waste material to determine characteristics and classify wastes
- provide information and advice on ways to collect, transport, handle, store and dispose of toxic wastes
- help clean up toxic waste spills and measure the extent of damage to the land, air or water
- help monitor and control the clean-up of contaminated land, water and air
- conduct inspections and waste audits of all types of industries to ensure that wastes are properly managed (stored, handled, recycled)
- write inspection and technical reports and gather evidence for use in legal actions
- advise industry and government, and assist in drafting rules and regulations for managing hazardous wastes
- inform industry and the public about hazardous waste management practices.

Hazardous waste management technologists often work in co-operation with environmental engineers to develop new methods of dealing with hazardous waste.

Working Conditions

Working conditions vary. Technologists may work in office environments or around dirty, noisy industrial sites. Depending on the circumstances, they may be required to wear personal protective equipment, work outdoors in all kinds of weather, travel frequently (sometimes internationally) or lift equipment weighing up to or over 25 kilograms.

Personal Characteristics

Hazardous waste management technologists need the following characteristics:

- dedication to personal and public safety
- alert and able to quickly recognize unsafe conditions
- patient, organized and orderly
- comfortable working with mechanical devices and instruments
- able to understand and keep up to date regarding regulations, guidelines and environmental legislation
- able to keep accurate records and write reports
- able to work with other members of a team.

They should enjoy taking a methodical approach to their work, analyzing data and finding innovative solutions to problems, and directing the work of others.

Educational Requirements

Hazardous waste management technologists must be:

- able to operate sampling instruments
- skilled at using computers to manipulate and analyze data
- able to understand and interpret laboratory results
- familiar with the operation of waste management and treatment facilities (landfills, hazardous waste storage sites, processing sites) and equipment.

Some employers require applicants to have a clean driving record.

Technologists may acquire the required skills and knowledge through a variety of education routes combined with on-the-job training. For example, they may take a related two year diploma program (such as environmental science or natural resource managment) or a related three or four year degree program (such as a Bachelor of Science degree biology, chemistry or environmental sciences). For information about related diploma and degree programs, see the Biological Technician, Environmental Auditor and Environmental Engineer occupational profiles.

Other Requirements

Certification is voluntary.

The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Hazardous waste technologists are employed by the following types of organizations:

- municipal water and wastewater treatment facilities
- regional solid waste management facilities
- public works departments
- municipal engineering firms
- waste management companies, brokers and recyclers
- government environmental regulatory services
- pulp and paper processing companies
- oil and gas exploration companies and contractors
- petrochemical companies
- environmental contracting and consulting firms.

Technologists employed in larger organizations may advance to supervisory positions. Obtaining a bachelor's or master's degree in science or environmental engineering is usually required to move into more responsible management, consulting or professional roles such as hazardous materials engineer, recycling management or environmental auditing.

Hazardous waste management technologists are part of the larger National Occupational Classification 2263: Inspectors in Public and Environmental Health and Occupational Health and Safety. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**
- **Professional and Technical Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,100 Albertans are employed in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since hazardous waste management technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for hazardous waste management technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group working part-time or full-time earned from **$18,300 to $172,300 a year.** The average salary was **$62,500 a year.** Salaries for hazardous waste management technologists are generally lower than the upper end of this range suggests.

Health Information Management Professional

Produced OCTOBER 2004

Health information management professionals manage the collection, recording and transmission of health information. They translate information from paper documents to electronic records or integrate information into databases, interpret data, and ensure security and access to health information guidelines are followed.

NOC Number(s): 1413.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M i d**

Duties

Health information management professionals safeguard the integrity and confidentiality of the information in health records. These records contain information about patients' medical histories and courses of treatment. For example, they may include physicians' notes, forms for prescribed medications, input from other members of the treatment team and/or test results.

Health information management professionals also turn the information in health records into data that can be used for statistics, research, planning and education. Health statistics are used to inform a wide variety of complex decisions (e.g. how to improve patient care, how to allocate resources).

Safeguarding records and producing health data involves the following processes:

- using an international classification system to convert a patient's diagnostic and procedural information to a standardized numerical format in a computer database
- collecting additional information about patients and their hospital stays to generate data about the patient population
- using computer applications to compile, sort, group, retrieve, analyze and present health data in a meaningful, relevant and timely way
- developing health information databases
- releasing patient information under the provisions of Alberta's Health Information Act
- ensuring that every patient's record is complete, filed and kept secure, but still readily accessible.

In smaller, rural communities, health information management professionals may also do medical transcription (for more information, see the Medical Transcriptionist occupational profile).

Working Conditions

Health information management professionals generally work a standard work week. Where health record departments are open longer hours, they may be required to work shifts.

A significant part of a typical day is spent working at a computer. Because mistakes could have a negative effect on patient care or hospital funding, there is considerable pressure to be accurate as well as fast.

Personal Characteristics

Health information management professionals tend to prefer work responsibilities that require a high degree of accuracy, responsibility and attention to detail. They should enjoy taking a methodical approach to compiling and classifying information, operating information retrieval systems and responding to requests for information.

Educational Requirements

Health information management professionals need computer and information management skills, and knowledge of anatomy, physiology and pathology. They may acquire the necessary skills and knowledge by taking a full-time program at a post-secondary institution or a distance education program.

In Alberta, the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Health Information Management diploma program. The admission requirement is a high school diploma with 60 per cent in English 30 or 33 and Biology 30, and 50 per cent in Pure or Applied Math 30 or Math 31, or equivalent.

The **Canadian Healthcare Association** offers a two year Health Information Services program. Applicants must be employed in a health organization, have Grade 12 or equivalent education, and be proficient with computers. This program includes practical experience sessions and field placements.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Membership in the Canadian Health Information Management Association (CHIMA) requires successful completion of a recognized two year post-secondary program and a national certification exam. Membership in the Alberta Health Record Association (AHRA) and CHIMA is voluntary.

Employment and Advancement

(section revised JANUARY 2006)

Health information management professionals are employed in traditional settings such as hospitals, clinics and community care facilities, and non-traditional settings such as the Workers Compensation Board or the Canadian Institute for Health Information. Those interested in travel may find employment outside Canada with the World Health Organization or through foreign recruitment agencies.

Health information management professionals are part of the larger National Occupational Classification 1413: Records Management and Filing Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Public Administration**
- **Professional and Technical Services**
- **Finance, Insurance and Real Estate**
- **Information, Culture and Recreation**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,800 Albertans are employed in the Records Management and Filing Clerks occupational group which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since health information management professionals form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for health information management professionals.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next 10 to 15 years.

Salary

(section revised SEPTEMBER 2005)

Wages for health information management professionals who are members of the Health Sciences Association of Alberta range from **$20 to $32 an hour (2004).** For information about current collective agreements in the public and not-for-profit sectors, see the HSAA website.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Health Records Technicians occupational group working part-time or full-time earned from **$10,600 to $33,400 a year.** The average salary was **$18,500 a year.**

Health Service Administrator

Produced FEBRUARY 2005

Health service administrators plan, organize, direct, co-ordinate and evaluate health programs and services that promote health and provide care to individuals, groups and communities.

NOC Number(s): 0311
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M I**

Duties

Health service administrators may have executive responsibilities for an entire organization or be responsible for managing a specific department or program. In general, however, they:

- develop plans, policies and processes for health programs and services
- design appropriate organizational structures
- select and supervise staff
- advise the governing body on policy and operational matters, and assist in developing organizational mission statements
- ensure that laws, regulations and policies are followed
- develop and maintain effective working relationships with representatives from other organizations, including governments, professional associations, the media and other stakeholders in the health care system
- implement operational plans and manage budgets
- provide the leadership required for the organization to fulfil its goals and objectives.

Working Conditions

Although health service administrators work in an office environment, they do not always work standard office hours. Their hours of work often extend beyond an eight hour day to attend meetings or to complete major tasks.

This work can be stressful because health service administrators are responsible for the effectiveness of their organizations and, ultimately, the quality of the programs and services provided.

Personal Characteristics

Health service administrators need the following characteristics:

- excellent interpersonal and organizational skills
- good verbal and written communication skills including public speaking skills
- the ability to work effectively with others
- leadership and team-building skills.

They should enjoy co-ordinating information and directing the work of others, negotiating with members of governing boards and senior managers, and developing and implementing plans.

Educational Requirements

Educational requirements for health service administrators vary depending on the position and the size and nature of the health service organization concerned. There are no standard education requirements. However, employers generally hire applicants who have related post-secondary education or certification.

This occupation requires **a combination of education and experience**. Health service administrators who come to the field from medicine, pharmacy, nursing or accounting backgrounds can supplement their training and experience through extension or other educational programs in health service management. Those who have graduate degrees in health management usually start in junior administrative positions to gain on-the-job experience.

- **Athabasca University** offers
  - a three year Bachelor of Health Administration degree program. Applicants must be at least 16 years of age. A high school diploma is not required.
  - a two year University Certificate in Health Development Administration program. Applicants must be at least 16 years of age. A high school diploma is not required.
  - a Post-Diploma Bachelor of Health Administration program. Applicants must have an approved two or three year diploma from an accredited college or technical institute.
  - a Master of Health Studies program with specializations in leadership and nursing practice. Applicants must have a Bachelor's degree in nursing and at least two years of professional nursing experience, nursing registration, Basic Life Support (BLS) certification and immunization status.
- The **Canadian College of Health Service Executives (CCHSE)** offers an online Certified Health Executive (CHE) program. Students have up to three years to successfully complete two self-directed learning assignments, Maintenance of Certification credits and the CHE examination. Applicants must be members of the College, have at least two years of experience in health services management and supply three letters of reference. A Master's degree with a health care focus is strongly recommended. CCHSE honours outstanding members with its highest designation, the College's Fellowship.
- The **Canadian Healthcare Association (CHA)** Learning Department offers a two year distance education program leading to a Health Services Management certificate. Applicants must hold a management position in a health organization. CHA also offers other management programs for: those new to management roles, senior managers in long-term care organizations, and those in quality and risk management. CHA Learning has an agreement with Athabasca University regarding credits for some CHA Learning programs.
- The **University of Calgary** offers four and five year Bachelor of Health Sciences Honours degree programs in Health and Society. Entrance requirements include English 30, Pure Math 30 (with a minimum grade of 70 per cent), Biology 30, Chemistry 30 and one of Math 31, Physics 30, Social Studies 30, Science 30, a 30-level language other than English or one 5-credit Grade 12 subject. Enrollment is limited.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Health service administrators are employed by:

- public health organizations
- specialty hospitals and acute care hospitals
- continuing care facilities
- mental health facilities
- rehabilitation agencies
- health planning agencies and government departments
- health associations
- regional health authorities
- government departments.

They generally start in junior positions and advance to positions in senior management or larger organizations.

Health service administrators are part of the larger National Occupational Classification 0311: Managers in Health Care. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,050 Albertans are employed in the Managers in Health Care occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for health service administrators vary greatly depending on the size and nature of the health service organization, and the administrator's qualifications and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Managers in Health Care occupational group working part-time or full-time earned from **$22,700 to $92,500 a year.** The average salary was **$50,000 a year.**

© Government of Alberta, Human Resources and Employment

Hearing Aid Practitioner

Produced SEPTEMBER 2003

Hearing aid practitioners evaluate clients' hearing acuity, sensitivity and communication, and select, fit, service and repair hearing instruments.

NOC Number(s): 3235.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S O**

Duties

Hearing instruments are electronic devices that amplify sound for people who have impaired hearing. Different types of hearing instruments use different methods to amplify sound.

Duties and responsibilities vary from one position to another but, in general, hearing aid practitioners:

- discuss hearing problems with clients and help them adjust to hearing loss
- use test instruments and standard evaluation procedures to test clients' hearing (e.g. speech reception, speech discrimination) and determine heari ıg thresholds
- identify and evaluate hearing problems
- explain their findings to clients, provide information about funding sources and help clients select appropriate hearing instruments or devices
- take ear impressions for use in the manufacture of hearing aids
- fit and adjust hearing aids
- provide advice on the use of hearing instruments
- do follow-up examinations and adjust devices as necessary
- program, service and make minor repairs on hearing aids and related equipment
- provide advice regarding available medical and rehabilitation facilities
- advise other health professionals and interested people when requested.

Working Conditions

Most hearing aid practitioners work in office, retail or health care environments. Hours of work vary and may include evening and weekend work to accommodate client needs. Some travel may be required.

Working with clients who have unrealistic expectations can be stressful.

Personal Characteristics

Hearing aid practitioners need the following characteristics:

- good communication skills
- good hand-eye co-ordination
- patience
- self-discipline
- an interest in biology and technology
- good interpersonal skills and the ability to relate to clients of all ages (most clients are senior citizens)
- the ability to work well in a team environment.

They should enjoy compiling, recording and analyzing test results, working with clients and operating equipment used to test hearing, take ear impressions and fit hearing aids.

Educational Requirements

Hearing aid practitioners may learn on the job under the supervision of a qualified practitioner and take a related education program at the same time, or take the education program and then look for work. Either way, they should be comfortable using computers.

Grant MacEwan College in Edmonton offers a two-year Hearing Aid Practitioner diploma program by distance delivery. The entrance requirement is a high school diploma with English 30 and Math 10, or equivalent. A professional profile is also required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Health Professions Act and Hearing Aid Practitioners Profession Regulation, registration with the College of Hearing Aid Practitioners of Alberta (CHAPA) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College may perform restricted activities specified in the Regulation. Only registered members may call themselves Hearing Aid Practitioners.

Employment and Advancement

(section revised JANUARY 2006)

Hearing aid practitioners are employed in clinics, educational institutions, hospitals, rehabilitation centres and the private practices of audiologists. Many are self-employed. Most work in midsize or large cities. Those certified by the **National Board for Certification in Hearing Instrument Sciences** may work internationally.

Experienced hearing aid practitioners may start their own businesses or move into related occupations such as technical sales representative.

Hearing aid practitioners are part of the larger National Occupational Classification 3235: Other Technical Occupations in Therapy and Assessment. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,900 Albertans are employed in the Other Technical Occupations in Therapy and Assessment occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since hearing aid practitioners form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for hearing aid practitioners.)

Employment turnover and demand for hearing aid services are expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Some hearing aid practitioners work on a commission basis. Others are paid an hourly wage or annual salary. A few are self-employed.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Technical Occupations in Therapy and Assessment occupational group working part-time or full-time earned from **$11,900 to $85,100 a year.** The average salary was **$30,600 a year.**

© Government of Alberta, Human Resources and Employment

Heavy Equipment Operator

Produced DECEMBER 2003

Heavy equipment operators use a variety of mobile machines and attachments to excavate, grade and landscape earth or move workers, materials and equipment.

NOC Number(s): 7421
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Heavy equipment operators control equipment by moving levers or foot pedals, operating switches and/or turning dials. Their job titles generally reflect the types of machines they operate (e.g. bulldozer operator, grader operator). However, one operator may operate several types of equipment.

Bulldozer operators, also called cat operators or cat skinners, operate crawler-tractors equipped with:

- large blades across the front for moving obstacles
- rippers for tearing up terrain
- work platforms for other workers to work from.

They clear and level land on construction, mining and forestry sites, and push other equipment to provide traction and assistance when needed.

Back-hoe operators use a variety of attachments to dig trenches, load heavy materials, vibrate and break rock or concrete, back-fill excavations and scoop and dump materials. There are two types of back hoes: rubber-tired and track (often called excavators).

Front-end loader operators operate mobile machines with buckets on the front for picking up heavy loads of earth, rock, sand, gravel or snow and dumping it into piles, excavations or trucks.

Grader operators spread and level earth, sand, gravel and rock, and plow snow in the winter by controlling the height and angle of grader blades. To level surfaces to a specified grade, they make successive passes over the working area, watching reference stakes, level gauges and/or the hand signals of other workers.

Paver operators operate asphalt paving machines that lay down asphalt for roads, driveways and parking lots with the aid of stakes and level gauges.

Power shovel operators manipulate a boom or crane that supports a dipper handle with a large dipper. The dipper is used to scoop up dirt, rock and coal, and drop it into trucks or piles.

Scraper operators scrape, load and haul earth on mining or construction sites. They level work sites, haul soil for roads and right-of-ways and haul coal and ore at mining sites.

Other heavy duty equipment operators manipulate the controls of machines unique to particular industries (e.g. tree harvesters and skidders in forestry and trench excavators in pipeline construction). The work of still other heavy equipment operators is described in the occupational profiles Crane and Hoisting Equipment Operator and Surface Mining Equipment Operator.

Working Conditions

Heavy equipment operators work outdoors in almost any kind of weather, although they may work in air-conditioned and dust-controlled cabs. For most, work is seasonal. Considerable overtime may be required in the warmer months and layoffs can be expected in the winter months. At oil sands mining sites, shift work is often required. Employment may be on a project-by-project basis and operators may have to travel and be away from home frequently.

The working environment is often noisy, dusty and dirty and, occasionally, equipment operators may be required to work in dangerous locations. Operators of excavating and grading equipment sit for long periods of time on vibrating or bouncing machinery. To avoid accidental injury, operators must be very safety conscious and follow the signals of ground crew members.

Heavy equipment operators may be required to routinely lift items weighing up to 10 kilograms.

Personal Characteristics

Heavy equipment operators need the following characteristics:

- excellent physical condition
- good vision and awareness of depth
- good eye and hand/foot co-ordination and fast reflexes
- mechanical ability
- the ability to work well in a team
- good communication skills in English.

They should enjoy operating machinery, taking a methodical approach to their work and trouble-shooting problems.

Educational Requirements

(section revised MAY 2004)

Heavy equipment operators are **generally trained on the job or take related training programs**. They need to know how to:

- operate heavy equipment safely
- perform preventive maintenance tasks
- diagnose mechanical problems
- read grade plans and use grade stakes in measuring the amount of earth to be moved
- follow directions that are spoken or given by hand signals.

Some operators start as labourers or truck drivers and move to heavier equipment as they develop skills under the supervision of experienced operators. The length of the required on-the-job training varies with the type of machine and with the individual's ability.

On-the-job training may be supplemented by a few weeks of training sponsored by industry-related organizations such as equipment manufacturers or unions.

Some operators start by completing a formal training program. The following Alberta post-secondary institutions offer related programs:

- **Kevano College** in Fort McMurray offers an eight-week Heavy Construction Equipment Operator certificate program which specializes in the operation of crawler tractors, motor scrapers, compactors and skid steers. Applicants for this program must be at least 18 years of age, have Grade 10, have a valid Class 5 driver's licence, complete an employer survey questionnaire, submit a resume and references, and participate in a personal interview.
- **Northern Lakes College** in Grouard offers a 40-week Petroleum Employment Training Certificate of Completion program. Applicants must have high school credits in core courses or equivalent and a Class 5 driver's license.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Heavy equipment operators are employed in the petroleum, mining, forestry and construction industries. They may work for:

- general contractors building highways, dams and airports, or installing sewer and other utilities
- asphalt paving companies
- pipeline companies
- logging companies

- mining companies.

Experienced operators may move into related positions such as safety officer or trainer, or advance to supervisory positions.

Heavy equipment operators are part of the larger National Occupational Classification 7421: Heavy Equipment Operators (Except Crane) occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 12,550 Albertans are employed in the Heavy Equipment Operators (Except Crane) occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 270 to 400 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Wages for heavy equipment operators vary considerably depending on the type of equipment, the employer and the working conditions (e.g. isolated locations).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Heavy Equipment Operators (Except Crane) occupational group working part-time or full-time earned from **$21,200 to $154,000 a year.** The average salary was **$60,000 a year.**

Heavy Equipment Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Heavy equipment technicians maintain, repair and overhaul towed and self-propelled heavy vehicles and industrial heavy equipment and commercial transport devices connected to or moved by a power unit.

NOC Number(s): 7312, 7321.3
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I; O I M**

Duties

Duties vary from one position to another but, in general, heavy equipment technicians:

- interpret work orders and technical manuals
- keep equipment cleaned, lubricated and maintained
- diagnose faults or malfunctions
- adjust equipment and repair or replace defective parts, components or systems
- test repaired equipment for proper performance to ensure that the work done meets manufacturers' specifications and legislated regulations
- write service reports.

In Alberta, people in this occupation may be certified as a:

- transport trailer mechanic
- truck and transport mechanic
- heavy duty equipment mechanic (off-road)
- heavy equipment technician.

Transport trailer mechanics maintain and repair transport devices such as flat decks, dry freight vans, refrigerated vans, tankers, converters, boosters, pole trailers, jeeps, steering dollys and dump trailers, and any other commercial pull type devices.

Truck and transport mechanics maintain and repair vehicles and equipment such as:

- stationary and mobile internal combustion engines and components
- on-highway vehicles (trucks and buses)
- towed on-highway and off-highway vehicles (trailers).

Heavy duty equipment mechanics (off-road) maintain and repair vehicles and equipment such as:

- stationary and mobile internal combustion engines and components
- tracked equipment (crawler tractors)
- ground-engaging equipment and components such as rippers, ditchers, backhoes and trenchers and similar equipment
- towed earth-moving equipment (scrapers)
- self-propelled earth-moving equipment (motor scrapers)
- off-highway motor vehicles (trucks)
- towed off-highway vehicles (trailers).

Heavy equipment technicians maintain and repair vehicles and equipment such as:

- stationary and mobile internal combustion engines and components
- tracked equipment (crawler tractors)
- ground engaging equipment and components, including rippers, ditchers, backhoes, trenchers and similar equipment
- towed earth moving equipment (scrapers)
- self-propelled earth moving equipment (motor scrapers)

- rubber tired equipment (tractors)
- on-highway and off-highway motor vehicles (trucks)
- towed on-highway and off-highway vehicles (trailers).

Working Conditions

The working environment for heavy equipment technicians varies considerably from one job to another. Some heavy equipment technicians work in modern laboratories overhauling fuel injection pumps and delivery systems. Others work at construction or industrial sites, sometimes outdoors in all types of weather conditions. Travel requirements and hours of work also vary. There is some risk of injury when working with heavy equipment and power tools. However, proper safety standards are maintained at all times.

Technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Heavy equipment technicians need the following characteristics:

- good vision, hearing and sense of smell to diagnose problems
- physical strength and stamina
- the ability to work in cramped and awkward positions
- the ability to work independently or as part of a team
- mechanical ability and an interest in all types of machinery and engines, electronics and precision equipment
- the ability to think logically
- the ability to keep up to date with changes in technology.

They should enjoy doing precision work, problem-solving and working with their hands.

Educational Requirements

To work in Alberta, heavy equipment technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta high school transcript with Math 20 or 23, Applied Math 20 or Pure Math 20, English 20 or 23 and Science 20, Physics 20, Biology 20 or Chemistry 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates or technical school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** for the different branches of this trade vary.

- **Transport trailer mechanic:** two years (two 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training in the first year and a minimum of 1,800 hours of on-the-job training in the second.
- **Truck and transport mechanic:** three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year.
- **Heavy duty equipment mechanic (off-road):** three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year.
- **Heavy equipment technician:** four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year.

Apprentices are required to provide their own tools. The cost of the tools can range from $10,000 to $25,000.

Applicants who have related training or work experience may be eligible for credit or certification.

Heavy duty equipment mechanic (off-road) and **truck and tranport mechanic** apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Apprentices currently registered in the **old** Heavy Equipment Technician program **must** contact the nearest Alberta Apprenticeship and Industry Training office about the options available for completing their apprenticeship training program.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Keyano College in Fort McMurray
- Lakeland College in Vermilion
- Lethbridge Community College

- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Olds College
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Lethbridge Community College** offers a one year Agricultural and Heavy Equipment Technician certificate program. The entrance requirement is Applied Math 10 or Pure Math 10 and English Language Arts 20-1, 20-2 or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Industrial Heavy Equipment Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 20 or 33, Pure Math 20 or Math 33 and Physics 30 or Science 30. NAIT also offers a 32-week General Mechanic certificate of achievement. Applicants require English 10 or a Grade 11 English and Math 10 or a Grade 11 Math or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a one year Heavy Equipment Technician certificate program. The entrance requirement is at least 70 Alberta high school credits (Grade 11) with Pure Math 20, Applied Math 20 or Math 23, a Grade 11 English and Grade 11 science.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Transport trailer mechanics are employed in transportation company fleet repair shops, trailer dealerships, general mechanical repair shops, manufacturers' repair shops and specialized repair shops.

Truck and transport mechanics are employed in small repair shops, large fleet maintenance companies, transportation companies and construction companies.

Heavy duty equipment mechanics (off road) are employed in specialized repair shops, large fleet maintenance companies, transportation companies and construction companies.

Heavy equipment technicians are employed by specialized repair shops and organizations that own or lease the heavy equipment used in the construction, mining, forestry, material handling, landscaping, land clearing, agriculture and transportation industries.

Experienced journeymen may advance to supervisor or service manager positions. Alberta certified journeyman heavy equipment technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Heavy equipment technicians are part of the larger National Occupational Classification 7312: Heavy-Duty Equipment Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**
- **Wholesale Trade**
- **Repair, Maintenance, Personal and Other Services**
- **Transportation and Warehousing**
- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 8,950 Albertans are employed in the Heavy-Duty Equipment Mechanics occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 170 to 270 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since heavy equipment technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for heavy equipment technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **transport trailer mechanics** earn at least 60 percent of the journeyman wage rate in their place of employment in the first year.

Apprentice **truck and transport mechanics** earn at least 60 percent of the journeyman wage rate in their place of employment in the first year, 70 percent in the second and 80 percent in the third.

Apprentice **heavy duty equipment mechanics (off road)** earn at least 60 percent of the journeyman wage rate in their place of employment in the first year, 70 percent in the second and 80 percent in the third.

Apprentice **heavy equipment technicians** earn at least 60 percent of the journeyman wage rate in their place of employment in the first year, 70 percent in the second, 80 percent in the third and 90 percent in the fourth.

According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates for the branches vary, but generally range from **$18 to $30 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Heavy-Duty Equipment Mechanics occupational group working part-time or full-time earned from **$22,000 to $126,800 a year.** The average salary was **$55,900 a year.**

Helicopter Pilot

Produced SEPTEMBER 2003

Helicopter pilots transport passengers and freight by helicopter, an aircraft which can move in any direction at varying speeds or remain stationary in the air.

NOC Number(s): 2271.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O I D

Duties

Helicopters are used for various purposes such as:

- taking aerial photographs
- aerial surveys of wildlife
- prospecting
- firefighting
- transporting supplies and equipment to construction sites or oil and gas lease sites
- transporting business executives, medical patients or tourists
- search and rescue
- inspecting power lines and pipelines
- heli-logging
- heli-hiking or heli-skiing.

The duties and working conditions of helicopter pilots can vary a great deal from one job to another but, in general, they:

- determine flight requirements and contact NAV Canada for weather information
- check fuel supply and conduct pre-flight inspections
- ensure that passengers and cargo are loaded properly
- instruct passengers on safety
- operate the helicopter
- navigate using landmarks on the ground, compasses, radio directional equipment and maps
- file flight plans and keep records.

Operating a helicopter involves controlling the direction of flight with your right hand, controlling altitude with your left hand, pushing pedals with your feet to keep the machine pointing in the right direction and, at the same time, scanning the instrument panel and navigating the helicopter. Good co-ordination and many hours of practise are required to master these skills.

Working Conditions

Helicopter pilots employed in remote areas are often away from home for extended periods of time. Their hours of work can be irregular and, some days, they may be on call. Helicopter pilots are often required to load and unload cargo. Dealing with difficult customers and the need to be constantly alert, combined with tight flight schedules or deadlines, can be stressful.

Personal Characteristics

Helicopter pilots need the following characteristics:

- a good sense of spatial orientation
- good judgment and the ability to make decisions and act quickly
- good health, vision (with or without glasses), reflexes and hand-eye co-ordination
- the ability to work with little or no supervision for extended periods of time

- the flexibility required to deal with loads and tasks that vary constantly
- the ability to work and communicate effectively with personnel ranging from labourers to company presidents.

They should enjoy operating aircraft and related equipment, evaluating aircraft performance and directing the work of others.

Educational Requirements

(section revised OCTOBER 2004)

Helicopter pilots must be licensed by Transport Canada. The 100 hour course leading to a Commercial Helicopter Pilot Licence takes three to six months to complete and costs $40,000 to $65,000 depending on the type of helicopter used for training. The 60 hour course for a helicopter endorsement if the candidate already has a Commercial Fixed Wing Licence costs $23,000 to $40,000.

Commercial helicopter pilot training is available through:

- **Aerial Recon Surveys Ltd.** in Whitecourt
- **Bighorn Helicopters Flight School** in Calgary
- **E-Z Air Helicopter Training Inc.** in Edmonton
- **Great Slave Helicopter Flight Training Centre** in St. Albert
- **Millennia Helicopters Ltd.** in Grande Prairie
- **Rotorworks Inc.** in Whitecourt.

A high school diploma is a definite asset but not required. The minimum age to obtain a commercial licence is 18 years. However, some trainers prefer prospective helicopter pilots to be somewhat older because the work requires considerable maturity and emotional stability. Applicants must be able to read and write in English and pass a Transport Canada Category 1 medical examination.

Employment and Advancement

(section revised JANUARY 2006)

Some helicopter pilots are employed full-time. Others work on a seasonal basis from Spring until Fall or work on a contract basis.

Helicopter pilots are part of the much larger National Occupational Classification 2271: Air Pilots, Flight Engineers and Flying Instructors. In Alberta, over 75 per cent of people employed in this classification work in the **Transportation and Warehousing** industry. Helicopter pilots are also employed in the **Forestry and Logging** and **Oil and Gas Extraction** industries.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Air Pilots, Flight Engineers and Flying Instructors occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since helicopter pilots form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for helicopter pilots.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Air Pilots, Flight Engineers and Flying Instructors occupational group working part-time or full-time earned from **$20,200 to $131,000 a year.** The average salary was **$52,100 a year.**

Herbalist

Produced JANUARY 2005

Herbalists advise people about the use of herbs and dietary supplements to maintain good health and relieve symptoms related to conditions such as arthritis, rheumatism, asthma, skin disorders or stomach ailments.

NOC Number(s): 3232.4
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

Herbology is the study of plants and their health benefits. There are a number of different traditions of herbology including Western, Indigenous, Traditional Chinese and Ayurvedic (East Indian).

Herbalists may apply their knowledge of herbology to:

- recommend herbal products for clients
- cultivate herbs
- manufacture herbal compounds and tinctures
- trade herbs for commercial purposes or act as wholesale distributors
- teach or write about herbology.

The duties and responsibilities of clinical herbalists who deal directly with clients depend on where they work and the type of herbology they practice. In general, however, they:

- interview clients about health problems, personal and family medical history, current medical prescriptions and lifestyle
- observe clients to determine their general physical, mental and emotional condition
- determine the most likely underlying health problems
- recommend appropriate dietary changes, supplements or prepared herbal products, create unique mixtures for individual clients or recommend lifestyle changes.

Practical herbalists working in herbal or health food stores answer customers' questions and make recommendations. Those working in herbal wellness centres generally conduct lengthier interviews and may be more knowledgeable.

Working Conditions

Herbalists may work in private homes, stores, clinics (with chiropractors, naturopaths or other health practitioners), wellness centres or greenhouses. Some lifting (up to 10 kilograms) may be required.

Hours of work vary and may include some evenings and weekends. Sometimes, regular clients call herbalists for advice outside of regular working hours.

Personal Characteristics

Herbalists need the following characteristics:

- a genuine interest in working with people on a one-to-one basis and in improving client health
- the ability to communicate and get along well with all kinds of people
- a willingness to upgrade their knowledge of herbology and natural medicines on an ongoing basis.

They should enjoy talking to people, analyzing information and handling herbs.

Educational Requirements

The practice of herbology is not regulated in Alberta. There are **no standard minimum education or training requirements**. However, practising herbalists strongly recommend education or training in herbology, nutrition, anatomy and physiology.

In Alberta, **Grant MacEwan College** in Edmonton offers a two year Holistic Health Practitioner diploma program that includes courses in herbology. The entrance requirement is a high school diploma plus 90 hours of basic human anatomy and physiology or human physiology or equivalent. An interview and skills appraisal may be required. CPR at the Basic Rescuer Level and immunization records are required before the program begins.

Three and four year programs in Traditional Chinese Medicine may include courses in herbology (for more information, see the Acupuncturist occupational profile). Chinese practitioners use animal and insect derivatives as well as plant derivatives.

Before enrolling in an education program, prospective herbalists should discuss their training options with practising herbalists.

Continuing education programs often are offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Self-employed herbalists may be required to have a municipal business license and should have some form of malpractice insurance.

Employment and Advancement

(section revised JANUARY 2006)

Herbalists work in:

- health food stores
- chiropractic offices
- physiotherapy clinics
- herbal healing centres
- wellness centres.

They may be employed by others or set up their own shops or private practices. Some herbalists work with medical or naturopathic doctors. Some grow herbs for sale, or manufacture herbal products and sell them wholesale to distributors.

Advancement in this occupation generally takes the form of building a larger client base.

Herbalists are part of the larger National Occupational Classification 3232: Midwives and Practitioners of Natural Healing. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 500 Albertans are employed in the Midwives and Practitioners of Natural Healing occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since herbalists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for herbalists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Herbalists employed in health food stores earn from **$8 to $15 an hour**. Sales representatives in the health food industry earn from **$24,000 to $70,000 a year**, depending on their experience and sales **(2005 estimates).**

The treatment fees charged by self-employed clinical herbologists vary considerably, ranging from **$60 to $280 an hour (2005 estimate).** Their take-home pay for any given period depends on the number of clients they see and their overhead costs (e.g. the cost of renting office space) Some herbalists supplement their incomes via product sales from dispensaries.

Heritage Interpreter

Produced NOVEMBER 2003

Heritage interpreters provide information by conducting tours or role playing for visitors to museums, gallery exhibitions and historical, heritage and related sites.

NOC Number(s): 5212.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **S M d**

Duties

Duties and responsibilities may vary considerably from one position to another in this occupation but, in general, heritage interpreters:

- research information relevant to the museum, gallery, exhibit or historical site
- welcome visitors and provide orientation and general information
- interact with visitors, respond to questions, conduct visitor surveys, monitor visitor activity and handle emergency situations (e.g. medical emergencies, building evacuations)
- prepare brochures, write newspaper articles and assist with exhibit or display development
- design, develop and maintain props and teaching aids (e.g. historical or theatrical costumes)
- develop, present and evaluate educational programming and demonstrations for the general public or particular audiences (e.g. young children, students, seniors)
- help develop and deliver programs, activities and special events that engage the visiting public in an entertaining and informative manner
- co-ordinate volunteer activities and schedule, supervise and evaluate volunteers
- assist with general facility operations.

To make information interesting and meaningul to visitors, heritage interpreters may act the part of a real or fictional character or provide hands-on learning opportunities.

Working Conditions

Heritage interpreters may work indoors in museums or galleries, or outdoors at historical or heritage sites. They may spend much of their time on their feet. They make work part-time or full-time, and often work evenings and weekends.

Personal Characteristics

Heritage interpreters need the following characteristics:

- an enthusiastic interest in their subject field
- the ability to communicate effectively with visitors and consistently deliver programs and tours in a pleasant, confident and engaging manner
- the ability to relate well to all kinds of people and work as part of a team
- creativity for developing presentations
- writing skills for developing education and marketing materials
- flexibility (e.g. adjusting work schedules, multi-tasking)
- the ability to remain calm and take charge in emergency situations.

They should enjoy talking to people, synthesizing information to develop innovative programs and conducting tours.

Educational Requirements

Heritage interpreters need a **combination of related post-secondary education and experience**. This is a multi-disciplinary field that draws from a wide range of academic disciplines, including education, recreation and leisure studies, communication arts and other liberal arts disciplines (e.g. anthropology, archeology, history, native studies, fine arts, crafts, performing arts, psychology, sociology). The ability to speak two or more languages is a definite asset.

Post-secondary institutions located throughout Alberta offer programs that provide a suitable background for heritage interpreters. Admission requirements for degree programs vary depending on the program and the institution but generally include a high school diploma or equivalent with an average of at least 60 per cent (70 per cent for some programs) in English 30 and four other specified Grade 12 subjects (e.g. Social Studies 30 or a 30-level language other than English, 30-level math or science courses).

When choosing a post-secondary program, prospective heritage interpreters should discuss their career plans with people currently employed as heritage interpreters.

Alberta Tourism Education Council (ATEC) offers a nationally-recognized certification program for heritage interpreters that requires completion of 900 hours of on-the-job experience, a workbook and written exam, and independent industry evaluation.

Associations such as **Interpretation Canada**, **Museums Alberta** and the **Canadian Museums Association** also offer professional development opportunities.

The following Alberta post-secondary institutions offer related management programs:

- **Grant MacEwan College** in Edmonton offers a 10 month Arts and Cultural Management certificate program that includes seven months of classroom study followed by two and a half month internship. Applicants should have related experience and post-secondary education, and good references. Some courses are available on-line.
- The **University of Calgary** Faculty of Continuing Education offers a 300-hour Heritage Resource Management certificate program through Continuing Education that includes 124 hours of workplace practicum. The entrance requirement is a high school diploma but consideration will be given applicants who do not have a high school diploma. Applicants should have significant related experience.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Interpreters may be employed full-time, part-time or on a contract basis by:

- parks
- historic sites
- museums
- private tour operators.

Many positions are seasonal. These temporary positions can provide excellent experience for students or supplementary income for retired or semi-retired persons. Competition for permanent positions is keen so related work experience (as an employee or volunteer) is essential.

Experienced interpreters may:

- advance to supervisory and management positions such as chief interpreter, program co-ordinator, district interpretation and education supervisor
- move into administrative positions in planning, operations or programming
- move into related fields such as commercial or tour company guiding, public relations, marketing or education.

In some organizations, advancement to supervisory and management positions requires a graduate degree as well as several years of related experience.

Heritage interpreters are part of the much larger National Occupational Classification 5212: Technical Occupations Related to Museums and Art Galleries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 400 Albertans are employed in the Technical Occupations Related to Museums and Art Galleries occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since heritage interpreters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for heritage interpreters.)

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Technical Occupations Related to Museums and Art Galleries occupational group working part-time or full-time earned from **$14,700 to $75,800 a year.** The average salary was **$32,200 a year.**

© Government of Alberta, Human Resources and Employment

Historian

Produced NOVEMBER 2005

Historians research, analyze, interpret, synthesize and document human, cultural and technological history.

NOC Number(s): 4169.4
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

Historians may be involved in cross-cultural or interdisciplinary studies, or they may specialize in:

- the history of a particular country, region, person or group of people (e.g. those of a particular ethnic origin, religion, gender or sexual orientation)
- a time period
- a certain aspect of the past (e.g. agrarian, artistic, architectural, economic, feminist, military, political, social or technological history).

In general, historians:

- attempt to reconstruct and interpret the past by studying and analyzing original documents such as correspondence, diaries, newspaper files, oral history tapes, photographs, artifacts and other physical evidence
- research and prepare manuscripts in support of public programming and the development of exhibits at historic sites, museums, libraries and archives
- develop meaningful information systems by selecting, organizing and interpreting material
- conduct historical research as a basis for the establishment, conservation and reconstruction of national parks and historic sites
- teach and conduct research in colleges, universities, museums and other research agencies and schools
- conduct historical research as expert witnesses in legal cases
- conduct historical research for film and television programming
- conduct oral history interviews
- organize information for publication in print or other media.

Working Conditions

Historians may work alone or with a team on a project at a historical site, museum, archive or other heritage site. They rely on computers for word processing, desktop publishing, database and spreadsheet functions. If the work is of a design nature, photographic, drawing or drafting programs and equipment may be required.

Their research may require historians to travel to other cities or regions.

Personal Characteristics

Historians need to be effective communicators in person and in writing.

They should enjoy:

- co-ordinating information and finding innovative approaches to their work
- consulting with others and organizing their own activities
- taking a methodical approach to their research.

Educational Requirements

A Master of Arts (MA) degree in history is the minimum education requirement for most research positions. Historians working in heritage agencies such as museums and historic sites also may be required to be familiar with technologies used to present information to the public (e.g. Internet, CD-ROM, audio-visual). University positions require a doctoral (PhD) degree.

In general, the entrance requirement for a Master of Arts degree program is a related four year bachelor's degree with an above average grade point average. In Alberta, the following institutions offer **four year** bachelor's degree programs in history.

- **Athabasca University** offers a Bachelor of Arts (BA) degree program in History by distance education. Applicants must be at least 16 years of age.
- **The King's University College** in Edmonton offers a four year Bachelor of Arts (BA) in Politics, History and Economics degree program. The entrance requirement is an average of at least 60 per cent in English Langauge Arts 30-1 (or English 30) and four other appropriate Grade 12 subjects.
- The **University of Alberta** in Edmonton offers BA and BA (Honours), MA and PhD degree programs in History. The entrance requirement for the BA program is a competitive average of 65 to 80 per cent in English Language Arts 30-1 (or English 30), a 30-level language other than English or Pure Math 30 (or Math 30), and three other approved Grade 12 subjects (Social Studies 30 recommended). Students may apply to the honours program after one year of university studies. The University of Alberta in Camrose also offers bachelor degree programs in history.
- The **University of Calgary** offers a four year and a five year (co-op) BA degree programs, and MA and PhD programs in History. The entrance requirement for the bachelor's degree programs is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 or Math 30 or 31, and three of the following: Biology 30, Chemistry 3, Physics 30, Science 30, Social Studies 30, a 30 level language other than English, one five-credit Grade 12 subject.
- The **University of Lethbridge** offers four year BA and Bachelor of Arts and Science degree programs, five year combined degree programs and a MA program in History. The entrance requirement for the bachelor's degree programs is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three other appropriate 30-level subjects and a fifth Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of course work toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Historians are employed as consultants, researchers and instructors by:

- colleges and universities
- municipal, provincial and federal governments
- museums, historic sites and interpretive centres
- libraries and archives
- private businesses and agencies (e.g. television/movie production companies).

Many historians are employed on a contract basis.

Those who have BA and MA degrees may use their research, writing and analytical skills to move into other fields such as banking or information management, or to write federal civil service examinations for government departments such as External Affairs. With additional education, history graduates may move into related fields such as law, education, journalism, architecture or interior design.

Historians are part of the much larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since historians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for historians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

Salaries for university positions vary with:

- personal qualifications
- academic qualifications
- administrative responsibilities
- the particular faculty and university.

Home Economist

Produced MARCH 2005

Home economists enhance people's quality of life by providing advisory, counselling, management, promotion and education services related to money management, consumer education, foods and nutrition, home design, clothing and textiles, and family function.

NOC Number(s): 4164.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **I D S**

Duties

Home economists develop and deliver programs on topics such as human relationships and human development, financial management, business development and marketing, food, nutrition, clothing, textiles and housing. They may be generalists or specialize in a particular subject area. For example, home economists may:

- teach and advise adults and children in areas such as food preparation, daily nutrition, clothing, textiles, financial management, time management, life skills or family relationships
- develop and promote new food products or work in nutrition-related research
- work as specialists in nutrition and food processing or food storage, preparation and safety
- work as specialists in textile and apparel product development, fashion and costume design, protective clothing for industry, interior decorating, museum conservation or retail management
- educate consumers about housing-related issues such as home appliances, home energy or home design and construction
- help potential entrepreneurs plan small businesses
- provide leadership for organizational and community development
- work as retail buyers, or marketing or merchandizing specialists.

Working Conditions

Home economists generally work in an office environment but also may work in a wide variety of settings with business and community groups. Their hours of work may include some evening and weekend work. Travel may be required.

Personal Characteristics

Home economists need the following characteristics:

- a genuine interest in people and in helping others
- strong management, organization and leadership skills
- adaptability, creativity, initiative and independence
- well developed communication and presentation skills.

They should enjoy co-ordinating information and developing innovative approaches to problems, consulting with and advising consumers, and working with food products, textiles or other consumer goods.

Educational Requirements

The minimum educational requirement is a four year Bachelor of Science (B.Sc.) degree in home economics, human ecology, family and consumer sciences, nutrition and food sciences, or equivalent.

In Alberta, the **University of Alberta** in Edmonton offers:

- a four year B.Sc. program in Human Ecology with specializations in community studies, family and consumer studies, and textiles and clothing. The entrance requirement is an average of at least 70 per cent in English 30, Pure Math 30, Biology 30 or Chemistry 30 and two other approved Grade 12 subjects. Clothing and Textiles 30 or advanced level credits in CTS Fashion Studies Strand are recommended for students entering the textiles, clothing and culture specialization. Chemistry 30 is recommended for students interested in conservation of historic textiles or textile science.
- a four year B.Sc. program in Nutrition and Food Sciences with specializations in food science technology, foods and nutrition, or nutrition. The entrance requirement is an average of at least 70 per cent in English 30, Math 30, Biology 30, Chemistry 30 and one other approved Grade 12 subject (Physics 30 recommended).

Home economics teachers in schools must have a Bachelor of Education (B.Ed.) degree. They may take a B.Ed. degree program with a specialization in human ecology or a combined B.Sc. (Human Ecology)/B.Ed. degree program, or complete a Bachelor of Education (After Degree) program after completing a B.Sc. degree in Human Ecology or Nutrition and Food Sciences. For more information, see the Career and Technology Studies Teacher occupational profile.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised JANUARY 2006)

Professional Home Economist and Professional Human Ecologist are protected titles under Alberta's Professional and Occupational Associations Registration Act and Human Ecologist and Home Economist Regulation. This means that to call yourself a Professional Home Economist or Professional Human Ecologist, you must be a registered member of the Alberta Human Ecology and Home Economics Association (AHEA). You do **not** have to be registered if you do not call yourself a Professional Home Economist or Professional Human Ecologist.

Employment and Advancement

(section revised JANUARY 2006)

Home economists may be employed by or work on a contract basis for:

- consulting firms
- community, government or non-governmental agencies
- utility companies
- retail outlets
- food manufacturers or retailers
- home design firms
- apparel/fashion manufacturers or retailers
- professional associations
- international aid and development agencies.

With additional training or experience, home economists may become dietitians in hospitals or food service institutions (for more information, see the Dietitian occupational profile), textile conservators or museum curators (see the Conservator and Curator occupational profiles), or teach in junior and senior high schools, technical institutes or universities. Research positions generally require a post-graduate (master's or doctoral) degree.

Home economists are part of a larger health and social policy researchers occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

Over 1,600 Albertans are employed in the Social Policy Researchers, Consultants and Program Officers occupational group which is expected to grow 0.6 to 1.6 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since home economists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for home economists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Social Policy Researchers, Consultants and Program Officers occupational group working part-time or full-time earned from **$20,800 to $86,800 a year.** The average salary was **$54,100 a year.**

© Government of Alberta, Human Resources and Employment

Home Inspector

Produced SEPTEMBER 2003

Home inspectors visually examine buildings and write reports about the condition of major components such as the roof, structure, exterior, insulation, plumbing, electrical systems, heating and other systems and components.

NOC Number(s): 2264
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I d**

Duties

Home inspectors visually inspect house and apartment systems and components, looking for damage, evidence of deterioration or amateur maintenance work. They are hired by potential buyers or sellers to prepare detailed reports. Reports may be narrative or detailed checklists with notes about identified problems, how problems can be repaired, what will probably happen if repairs are not made and how much it will probably cost to make repairs. To avoid potential conflicts of interest, home inspectors cannot be involved in the sale of real estate or the repair of problems identified during inspections.

If they can do so without damaging finished surfaces, inspectors may probe structural components that show signs of deterioration. Otherwise, they note their observations in their reports and may recommend further evaluation.

On building exteriors, home inspectors check items such as:

- wall coverings, flashing and trim
- doors
- attached decks, balconies, stoops, steps, porches and railings
- eaves, soffits and fascias if they are accessible from ground level
- vegetation, grading, surface drainage and retaining walls if they might adversely affect the building
- walkways, patios and driveways.

On the roof, they check the roof covering, drainage systems, flashings and roof penetrations such as skylights and chimneys.

Inside, they check items such as:

- plumbing systems (water supply and distribution systems, fixtures and faucets, drains, vents, water heating equipment, etc.)
- electrical systems (service equipment and main disconnects, panels, conductors, over-current protection devices, a sampling of fixtures, switches and receptacles, etc.)
- heating and air conditioning systems and fireplaces
- walls, ceilings, floors, stairs, railings and a representative sampling of cabinets
- insulation and ventilation.

Home inspectors do not check items such as chimneys that are not readily accessible or the operation of accessories such as air filters, water softeners or lawn sprinklers.

Working Conditions

Self-employed home inspectors usually work from their own homes. Their hours are flexible but they often must work evenings and weekends to meet deadlines and accommodate clients' work schedules. Long working hours are common in the Spring and Fall.

The work is physically and emotionally demanding. For example, home inspectors are routinely required to squeeze into tight spaces, lift items weighing up to 10 kilograms and climb onto roofs. To avoid injury, they must follow safety precautions when inspecting electrical systems, roofs and other components. Dealing with real estate agents who want to close sales quickly and clients who have unrealistic expectations can be stressful.

Personal Characteristics

Home inspectors need the following characteristics:

- good oral and written communication skills
- good interpersonal skills
- integrity and the ability to disregard attempts to influence their reports
- the ability to present bad news diplomatically and deal effectively with people when they are upset
- the ability to understand complex technical documents such as manufacturers' specifications
- excellent observation skills.

They should enjoy taking a methodical approach to their work, analyzing their observations and dealing with people.

Educational Requirements

There is **no standard minimum education requirement** for home inspectors in Alberta. Most inspectors have a combination of education and training in one or more related fields (e.g. journeyman certification as a carpenter, electrician or plumber; courses in architectural technology, civil engineering or civil engineering technology) plus extensive work experience in construction or maintenance. They need indepth knowledge of:

- new and old electrical, plumbing, heating, ventilation and cooling systems, roofing and structural systems
- how different systems interact in a home
- hazardous materials that have been used in home construction
- causes and effects of deterioration in building systems and recommended remedies
- safety standards.

Full membership in the **Canadian Association of Home and Property Inspectors, Alberta Chapter** requires:

- successful completion of specified safety codes and heating, plumbing and electrical inspection courses
- successful completion of two CAHPI exams
- verification of the inspector's reporting system
- two mock inspections
- proof of adequate errors and omissions insurance
- compliance with the CAHPI code of ethics
- 250 fee-paid inspections.

The required safety codes courses are offered by the **Safety Codes Council** and the heating, plumbing and electrical inspection courses are available by distance education through the **Southern Alberta Institute of Technology (SAIT)**. Associate members are required to complete all of the above requirements with the exception of the 250 fee-paid inspections and are expected to become full members within three years.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Home inspectors are hired by people who want an unbiased opinion about the condition of a house or an apartment that they are thinking about buying or selling. Most home inspectors are self-employed. To start their own businesses, they need a reliable vehicle, a computer, tools (e.g. ladder, moisture meter, gas detector, carbon monoxide detector) and the financial resources required to cover overhead costs until their businesses are established. Errors and omissions insurance is essential because home inspectors may be sued or required to pay for repairing problems they did not detect.

Some inspectors purchase home inspection franchises which provide support, training and marketing services.

Home inspectors are part of the larger National Occupational Classification 2264: Construction Inspectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)

- trends and **events** affecting overall employment and the real estate market
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,050 Albertans are employed in the Construction Inspectors occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since home inspectors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for home inspectors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Incomes for self-employed home inspectors vary considerably:

- from one inspector to another, depending on the inspector's qualifications and business, marketing and customer service skills
- from one season to another (Spring and Fall are usually the busiest seasons)
- from one year to another, depending on the level of activity in the local real estate market.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Construction Inspectors occupational group working part-time or full-time earned from **$24,700 to $94,900 a year.** The average salary was **$60,300 a year.**

© Government of Alberta, Human Resources and Employment

Homeopath

Produced OCTOBER 2004

Homeopaths promote wellness by suggesting lifestyle changes and treat ailments by administering small doses of natural substances that cause similar symptoms.

NOC Number(s): 3232.5
Minimum Education: 5 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

Homeopathy is based on the principle that like cures like. Homeopaths administer very small amounts of natural substances which would produce similar symptoms of illness to those the patient is already experiencing. As with vaccinations, small amounts stimulate the body to fight the cause of the symptoms.

Homeopaths conduct extensive interviews with new patients. They ask questions about external and internal factors that may contribute to a patient's symptoms. Based on their analysis of contributing factors, homeopaths may recommend lifestyle changes (e.g. diet, excercise) or recommend a homeopathic remedy. Since people often react to the same substances differently, homeopaths must consider a variety of factors when selecting remedies.

When a patient has acute or obvious symptoms, diagnosis and treatment may be straightforward. In more difficult cases, homeopaths research information about remedies that have worked in the past for patients who had similar characteristics and symptoms. Usually, this involves accessing information stored in databases. Finding a remedy that works may require several consultations.

Homeopaths also:

- instruct patients about how to use remedies
- manage homeopathic clinics
- participate in public education activities that promote health and wellness.

Working Conditions

Homeopaths may work from their homes or operate private clinics in Alberta. They set their own hours but must work some evening and weekend hours to meet patient needs. Travel is required when homeopaths practice from more than one location.

Self-employment and continuous patient contact can be stressful.

Personal Characteristics

Homeopaths need the following characteristics:

- excellent observational skills
- excellent communication skills
- patience
- persistence
- an unprejudiced, open mind
- analytical ability.

They should enjoy analyzing information provided by patients, performing tasks requiring precision, and helping patients regain and maintain good health.

Educational Requirements

Homeopaths come from a variety of backgrounds. A number of organizations offer programs of study or certification programs leading to professional designations such as the following:

- CCH (Certified in Classical Homeopathy) offered by the Council for Homeopathic Certification to qualified applicants who pass a series of examinations.
- DHANP (Diplomate of the Homeopathic Academy of Naturopathic Physicians) offered by the Homeopathic Academy of Naturopathic Physicians, a specialty society in the profession of naturopathic medicine. General membership in HANP is open to all. See the Naturophathic Doctor occupational profile for information about the occupation.
- DHMHS (Diploma in Homeopathic Medicine and Health Sciences) offered by the Ontario College of Homeopathic Medicine.
- DHMS (Diploma in Homeopathic Medicine and Sciences) offered by the Homeopathic College of Canada and accredited by the Ontario Homeopathic Association.
- DHt (Diploma of Homeotherapeutics) offered by the American Institute of Homeopathy. Members of AIH are medical or osteopathic physicians, dentists, advanced practice nurses or physician assistants. For more information, see the Physician, Dentist, Registered Nurse and Licensed Practical Nurse occupational profiles.
- RSHom(NA) (Registered Member of the Society of Homeopaths, North America) offered by the North American Society of Homeopaths. Registered members of NASH have been certified by the Council for Homeopathic Certification.

The following Canadian institutions offer courses or programs in homeopathy:

- The **Homeopathic College of Canada** in Toronto offers distance education and classroom courses.
- **Luminos Homeopathic Courses Ltd.** in West Vancouver offers a four year part-time program via distance education and classroom courses in various locations.
- The **Manitoba College of Homeopathic Medicine** in Winnipeg offers a three year program.
- The **Ontario College of Homeopathic Medicine** in Toronto offers a three to four year diploma program and an 18 month distance education or classroom program for health professionals. At least two years of previous post-secondary education is recommended.
- The **Toronto School of Homeopathic Medicine** offers distance education and classroom programs.

Other Requirements

The practice of homeopathy is not regulated anywhere in Canada. However, two pieces of legislation are relevant to the practice of homeopathy in Alberta:

- Homeopaths may not perform restricted activities defined in the Government Organization Act.
- Homeopaths may use titles and words such as doctor, registered and regulated only as defined in the Health Professions Act.

Employment and Advancement

(section revised JANUARY 2006)

Homeopaths are self-employed practitioners who may work from their homes or operate private clinics. Some homeopaths travel to offer services in more than one location.

In this occupation, advancement generally involves building a larger practice.

Homeopaths are part of the larger National Occupational Classification 3232: Midwives and Practitioners of Natural Healing. In Alberta, most people in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 500 Albertans are employed in the Midwives and Practitioners of Natural Healing occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. (**Note**: Since homeopaths form only a small part of the larger occupational group on which this forecast is based, less than one new homeopath position is likely to be created each year.)

Salary

Incomes vary considerably in this occupation. Homeopaths may earn very little until they have established a large enough practice to make a profit. They may charge set fees per visit and/or charge for homeopathic remedies.

Hotel and Motel Desk Clerk

Produced MAY 2003

Desk clerks are employed in hotels and motels, and are often the first people to greet incoming guests.

NOC Number(s): 6435
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M o

Duties

When new guests arrive, desk clerks:

- welcome them
- register them
- assign rooms and issue room keys or cards
- provide information about services available in the hotel and in the community
- verify customers' credit and establish how the customer will pay for the accommodation
- promote and sell guest rooms.

When guests check out, desk clerks:

- review accounts with them
- receive payment for accounts
- balance cash accounts
- advise housekeeping which rooms have been vacated and are ready for cleaning.

Desk clerks may also:

- keep an inventory of rooms reservations
- respond to reservation enquiries
- answer telephones and take messages
- handle guest mail
- record guest comments
- deal with customer complaints or refer dissatisfied customers to a manager.

In small hotels, desk clerks may also have administrative responsibilities (for more information, see the Administrative Assistant profile). On the night shift, desk clerks may assume the duties of assistant manager, night cashier, concierge (manager of guest services) or night auditor.

In large hotels, front desk duties may be divided among several desk clerks.

Working Conditions

Desk clerks work shifts, including weekends and holidays. They must remain standing for most of their working hours.

Personal Characteristics

Desk clerks provide one of the first impressions of a hotel or motel services so they must be:

- pleasant, tactful and patient
- able to communicate well with a wide variety of people
- able to sell the services of their establishment
- committed to providing good service.

They should enjoy dealing with people, taking a methodical approach to compiling information, and operating computerized and manual systems.

Educational Requirements

(section revised OCTOBER 2005)

Since employers look for job applicants who have experience meeting people and handling cash, work experience in the hospitality industry or in retail sales is a definite asset. Employers also look for evidence of good judgement in potential employees because desk clerks may be put in the position of having to deal with problem patrons and emergency or security problems.

Many employers hire **high school graduates** for desk clerk positions. Some hotels provide training on the job, but **related post-secondary education or certification** is preferred.

Front desk clerks who wish to advance into hotel management may take any of the business administration and management programs offered by post-secondary institutions throughout Alberta. The following institutions offer programs of study directly related to the hospitality and tourism industry:

- The **Northern Alberta Institute of Technology** in Edmonton offers a one year certificate and a two year Hospitality Management diploma program. The minimum education requirement for both programs is Grade 11 including English and math.
- **Red Deer College** offers one year certificate and two year diploma programs in Hospitality and Tourism with specializations in accounting and finance management, food and beverage management, and rooms and marketing management. The entrance requirement is a high school diploma or equivalent.
- **Robertson College** offers a 40-week International Hospitality and Hotel Management program. The entrance requirement is a high school diploma with a Grade 12 English.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Hotel and Restaurant Management diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, and Pure or Applied Math 30 or Math 33.
- **Training Inc.**, a private vocational school in Lethbridge, offers a 12 week Hotel and Restaurant Operations program. Applicants must contact the school for entrance requirements.
- **Trend College**, a private vocational school in Edmonton, offers a 34 week Hotel and Tourism Management Studies program and a 50 week International Hotel and Tourism Management Studies program. Applicants must be at least 19 years of age, attend a personal interview, have the approval of the program co-ordinator, and have a high school diploma with English 30 or 33 or equivalent.
- The **University of Calgary** offers a Bachelor of Hotel and Resort Management degree program that may also be taken as a co-op program. Applicants must be admitted to an approved two year diploma program such as the Hotel and Restaurant Management program at SAIT (see above) and achieve a minimum grade point average of 3.0/4 in the diploma program before they are admitted to the BHRM program. The University of Calgary also offers four year and five year co-op Bachelor of Commerce degree programs in Tourism and Hospitality Management. The entrance requirement for the B.Comm. program is a high school diploma with an average of at least 72 per cent in English 30, Math 30 or Pure Math 30, and three of the following subjects: Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, or one five credit Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Contact the **Alberta Hotel and Lodging Association** for information about a home study course for front desk clerks offered by the **Educational Institute of the American Hotel and Motel Association** or contact the Educational Institute directly.

The **Alberta Tourism Education Council (ATEC)** has developed a process for front desk agents to demonstrate their skills and write an examination to earn a certificate that is recognized across Canada in the tourism and hospitality industry.

Employment and Advancement

(section revised JANUARY 2006)

In a large hotel, employees who do not have related post-secondary education generally start in positions such as telephone operator, guest services attendant or cashier, and advance to desk clerk positions when they become available. Employment for desk clerks is steady and year-round, except in summer hotels and resort operations. In some establishments, hours may be reduced during slower periods.

Desk clerks may advance to assistant front office and front office manager positions, particularly if they have or are willing to take related post-secondary education.

Hotel and motel desk clerks are part of the larger National Occupational Classification 6435: Hotel Front Desk Clerks. In Alberta, people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,500 Albertans are employed in the Hotel Front Desk Clerks occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for desk clerks vary greatly according to the size and location of the hotel, and the clerk's experience and degree of responsibility.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Hotel Front Desk Clerks occupational group working part-time or full-time earned from **$13,000 to $40,400 a year.** The average salary was **$21,200 a year.**

Human Ecologist

Produced JANUARY 2006

Human ecologists provide advisory, counselling, management, research and education services related to family functioning, parenting, consumer education, money management, textiles and clothing, foods and nutrition and community resources.

NOC Number(s): 4164.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: I D S

Duties

Human ecologists use a holistic, preventative approach to help people optimally manage their daily lives. For example, they may develop and deliver programs related to a wide range of topics:

- parenting
- intimate relationships
- financial management
- community leadership
- meal planning and food choices
- small business development
- marketing and public relations
- textiles and clothing production and consumption
- life skills and lifestyle management
- career planning.

Human ecologists may:

- provide leadership for organizational and community development
- advise and coach individuals on career development, lifestyle management and personal image
- conduct research on the impact of public policy on children and families
- link individuals and families with community resources
- provide leadership in delivering family and youth support services
- work as specialists in nutrition education and promotion, food preparation and food safety
- specialize in fashion merchandising, protective clothing design, apparel design or production, interior decorating, textile science or quality control testing
- teach and advise adults and children regarding life skills.

Working Conditions

Human ecologists work in a variety of office and field settings with business and community groups. Some work in corporate and government office environments; others work in manufacturing plants, retail stores, small businesses and not-for-profit service agencies. Depending on the nature of their work, some evening and weekend work, as well as travel, may be required.

Personal Characteristics

Human ecologists need the following characteristics:

- a genuine interest in people and in helping others
- strong management, organization and leadership skills
- a team-oriented, collaborative approach to work
- adaptability, creativity, initiative and independence

- excellent communication and presentation skills.

They should enjoy coordinating information, developing innovative approaches to problems, and consulting with and advising clients and customers.

Educational Requirements

The minimum educational requirement is a four year Bachelor of Science (B.Sc.) degree in home economics, human ecology, family and consumer sciences, nutrition and food sciences, or equivalent.

In Alberta, the University of Alberta in Edmonton offers:

- a four year B.Sc. program in Human Ecology with specializations in family ecology and textiles and clothing. Minor specializations include child and youth studies, aging, community diversity, community nutrition, fashion merchandising, museum studies, and design and product development. The entrance requirement is an average of at least 70 per cent in English 30, Pure Math 30, Biology 30 or Chemistry 30 and two other approved Grade 12 subjects. Clothing and Textiles 30 or advanced level credits in CTS Fashion Studies Strand are recommended for students entering the textiles and clothing specialization. Chemistry 30 is recommended for students interested in conservation of historic textiles or textile science.
- a four year B.Sc. program in Nutrition and Food Sciences with specializations in food science technology, foods and nutrition, or nutrition. The entrance requirement is an average of at least 70 per cent in English 30, Math 30, Biology 30, Chemistry 30 and one other approved Grade 12 subject (Physics 30 recommended).

Career and Technology Studies teachers in schools must have a Bachelor of Education (B.Ed.) degree. They may take a B.Ed. degree program with a specialization in human ecology or a combined B.Sc. (Human Ecology)/B.Ed. degree program, or complete a Bachelor of Education (After Degree) program after completing a B.Sc. degree in Human Ecology or Nutrition and Food Sciences. For more information, see the Career and Technology Studies Teacher occupational profile.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Professional Home Economist and Professional Human Ecologist are protected titles under Alberta's Professional and Occupational Associations Registration Act and Human Ecologist and Home Economist Regulation. This means that to call yourself a Professional Home Economist or Professional Human Ecologist, you must be a registered member of the Alberta Human Ecology and Home Economics Association (AHEA). You do **not** have to be registered if you do not call yourself a Professional Home Economist or Professional Human Ecologist.

Employment and Advancement

Human ecologists may be employed by or work on a contract basis for:

- consulting firms
- community, government or non-governmental agencies
- utility companies
- food manufacturers or retailers
- home design firms
- apparel/fashion manufacturers or retailers
- not-for-profit service agencies
- international aid and development agencies.

Human ecologists may move into a wide variety of occupations (see Related Occupational Profiles below). With additional training or experience, they may become dietitians in hospitals or food service institutions (for more information, see the Dietitian occupational profile), textile conservators or museum curators (see the Conservator and Curator occupational profiles), or teach in junior and senior high schools, technical institutes or universities. Research positions generally require a post-graduate (master's or doctoral) degree.

Human ecologists are part of a larger health and social policy researchers occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,600 Albertans are employed in the Social Policy Researchers, Consultants and Program Officers occupational group which is expected to grow 0.6 to 1.6 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since human ecologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for human ecologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Social Policy Researchers, Consultants and Program Officers occupational group working part-time or full-time earned from **$20,800 to $86,800 a year.** The average salary was **$54,100 a year.**

© Government of Alberta, Human Resources and Employment

Human Resources Professional

Produced OCTOBER 2005

Human resources professionals facilitate the effective use of human resources to achieve organizational goals and objectives. They advise all levels of their organizations regarding people management, develop employee recruitment and retention programs, assist in the selection of job candidates, facilitate employee professional development, and develop and administer other human resource programs.

NOC Number(s): 1223
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M d

Duties

In general, human resources professionals:

- work with managers and staff to develop human resources strategies and programs that address the organization's needs and strategic plans
- develop and implement recruitment and retention programs that identify potential labour markets, attract potential employees and retain current employees
- develop and implement succession planning initiatives to facilitate knowledge transfer before employees retire
- work with occupational health and safety personnel to develop and implement employee wellness and workplace safety programs
- prepare and evaluate position descriptions, interview applicants and conduct reference checks
- provide advice regarding employee relations issues
- arrange for and, in some cases, deliver training programs for employees
- ensure compliance with employment legislation
- administer employment policies and programs (e.g. performance management and employee recognition programs)
- evaluate collective agreements and employee benefit plans (e.g. group life insurance, sickness and accident benefits, health insurance, holidays and retirement pension plans) and supervise staff who administer benefit and reward programs
- assist with labour relations and in preparing, researching and negotiating collective agreements
- use and oversee the management of human resource information systems.

In larger organizations, human resources professionals may specialize in:

- **recruitment and selection** - advertising vacant positions, screening applications, ensuring that all applicants are evaluated on the basis of their qualifications and that recruitment standards are fair, selecting or helping to select the best qualified applicants, conducting reference checks and preparing employment contracts.
- **labour relations** - negotiating and interpreting collective agreements.
- **classification** - establishing positions that fit organizational requirements, evaluating and allocating positions, and conducting reviews to ensure consistency with others in the industry.
- **compensation** - ensuring that wages and salaries are set according to established job specifications and classifications.
- **training and development** - conducting and responding to market surveys, identifying and providing (or arranging for) ways to improve employee competence and versatility.
- **performance management** - defining performance standards consistent with the organization's mission, culture, environment, strategy and structure.
- **employee benefits administration** - co-ordinating employee benefit plans related to life, medical, dental or disability insurance.

- **human resource planning** - forecasting the organization's human resource needs and helping management develop human resource policies and procedures.

In a small business, one general manager may be responsible for all personnel work and may have other responsibilities as well.

Working Conditions

Human resource professionals may work primarily in an office environment or in commercial or industrial environments. They generally work standard weekday office hours although some flexibility in hours may be required. Travel requirements depend on the size and nature of the organization.

Personal Characteristics

Human resources professionals need the following characteristics:

- good analytical and problem solving skills
- integrity and good judgement
- sensitivity and the ability to keep employee information confidential
- the ability to communicate well with people in person and in writing
- tact and diplomacy
- strong interpersonal skills
- the ability to understand a variety of viewpoints
- leadership ability
- good organization and time management skills
- the ability to earn the trust and co-operation of managers, unions and employees.

They should enjoy coaching and counselling managers and employees, taking a methodical approach to their work, and taking responsibility for projects.

Educational Requirements

Most employers prefer to hire human resources professionals who have a degree or diploma in a field related to human resource management (e.g. business administration, commerce, industrial relations or a related social science).

Suitable post-secondary education programs are offered by universities, colleges and technical institutes throughout Alberta. The following institutions offer programs specifically in human resources:

- **Athabasca University**, a distance learning institution, offers a three year bachelor degree (90 credits) and a one year certificate (30 credits) in Human Resources and Labour Relations. Applicants must be at least 16 years of age. A high school diploma is not required.
- **Bow Valley College** offers a part-time 100 hour Human Resources certificate program.
- **Grant MacEwan College** in Edmonton offers a two year Human Resource Management diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 75 per cent in ELA 30-2 or English 33) and Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33), or equivalent. Certificate and diploma programs are available part-time.
- **Keyano College** in Fort McMurray offers a part-time Human Resources certificate program. The entrance requirement is a high school diploma with at least 60 per cent in ELA 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33) and Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33), or equivalent.
- **Lakeland College** offers a one year Human Resource Management certificate program in Vermilion and Lloydminster. The entrance requirement is a high school diploma with ELA 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33) and at least 55 per cent in Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33), or equivalent.
- **Mount Royal College** in Calgary offers:
    - a one year Business Administration certificate program with a specialization in Human Resources. This program is intended for working adults who wish to improve their business knowledge.
    - a two year Business Administration diploma program with a specialization in Human Resources. The entrance requirement is a high school diploma with at least 60 per cent in ELA 30-2 (or English 30), Pure or Applied Math 30 and three other appropriate Grade 12 subjects, or equivalent.
    - a 150 hour Human Resources Management program through Continuing Education. Applicants must be at least 18 years of age.

- The **University of Alberta** in Edmonton offers
  - four year and five year (co-op) Bachelor of Commerce degree programs with a specialization in Human Resource Management. The entrance requirement is one pre-professional year in a Bachelor of Arts or Science program with specific courses. In general, the entrance requirement for BA and B.Sc. programs is a competitive average in ELA 30-1 (or English 30), Pure Math 30 (or Math 30) and three other appropriate 30 level subjects.
  - an eight course Human Resource Management part-time certificate program through the Faculty of Extension. The entrance requirement is a high school diploma or equivalent.
- The **University of Calgary** offers
  - four year and five year (co-op) Bachelor of Commerce degree programs with a specialization in Human Resources and Organizational Dynamics. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in ELA 30-1 (or English 30), Pure Math 30 (or Math 30) and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five credit Grade 12 subject.
  - a 300 hour Human Resource Management certificate program through the Faculty of Continuing Education (online or non-distance delivery). The entrance requirement is a high school diploma or over 23 years of age, and suitable business experience.
- The **University of Lethbridge** offers a ten course certificate program, four year Bachelor of Management and five year combined degree programs, and post-diploma and degree programs in Human Resource Management and Labour Relations. The entrance requirement for the degree program is a high school diploma with an average of at least 65 per cent in ELA 30-1 (or English 30), Pure Math 30 or Math 30 (or Applied Math 30 and at least 75 per cent in the University of Athabasca's Math 101), two other appropriate 30 level subjects and a fifth Grade 12 subject. The post-diploma degree program is designed for business administration diploma program graduates.

Post-secondary institutions throughout the province may offer other programs and courses related to specific aspects of human resource management (e.g. career development, conflict resolution, negotiation, project management, recruitment practices, workplace learning).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Human Resources Institute of Alberta offers the Certified Human Resources Professional (CHRP) designation to applicants who successfully complete two examinations. University graduates must have one year of recognized professional human resource experience gained in the three year period prior to application. Diploma graduates must have three years of recognized experience in the preceding five years.

Employment and Advancement

(section revised JANUARY 2006)

Human resources professionals are employed in:

- educational institutions
- federal, provincial and municipal governments
- large businesses
- manufacturing firms
- health care institutions
- financial institutions.

Some human resources professionals are self-employed consultants.

Experienced human resources professionals may move into supervisory and management positions.

Human resources professionals are part of the larger National Occupational Classification 1223: Personnel and Recruitment Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Public Administration**
- **Health Care and Social Assistance**

- **Professional and Technical Services**
- **Educational Services**
- **Other Manufacturing**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,600 Albertans are employed in the Personnel and Recruitment Officers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since human resources professionals form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for human resources professionals.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Personnel and Recruitment Officers occupational group working part-time or full-time earned from **$26,800 to $108,500 a year.** The average salary was **$61,100 a year.**

Hydrologist

Produced SEPTEMBER 2005

Hydrologists study the distribution and circulation of water in the atmosphere, on the earth's surface and in soil and underlying rocks.

NOC Number(s): 2113
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Duties and responsibilities vary from one position to another. Hydrologists often specialize in particular fields but, in general, they:

- study the flow and storage of water in rivers, lakes, wetlands, glaciers, snowpacks and in rocks and soils
- study the transport and fate of dissolved and suspended matters in water
- conduct short-term and long-term climate assessments and study effects on water flow and storage
- study erosion and sedimentation
- assess the feasibility of developing hydroelectric power plants, irrigation systems and water supplies
- conduct risk analyses for floods and droughts
- develop water and drainage management plans
- assist in minimizing the environmental impacts of pollution, water-borne diseases, erosion and sedimentation
- study public and industrial water supply, water quality, wastewater, water base and recreation requirements, and their impacts on the wetland habitats of fish and wildlife
- conduct environmental impact assessments of resource projects on water quantity and quality
- gather geographic information system (GIS), remote sensing and other data, perform statistical analyses and develop hydrologic models
- prepare technical reports
- co-ordinate and supervise the work of technologists and technicians.

Hydrogeologists specialize in studying subsurface occurrences of water.

Working Conditions

Hydrologists may work alone or with a team of professionals, technologists and technicians. Their time is generally divided between office and field work. Hours of work can be long and field work may involve being away from home for weeks at a time. Medium lifting (up to 25 kilograms) may be routinely required.

Personal Characteristics

Hydrologists need the following characteristics:

- the ability to work with complex scientific details and perform mathematical analyses
- imagination and creativity
- excellent oral and written communication skills
- the ability to work independently and as part of a team.

They should enjoy co-ordinating information and developing innovative approaches to problems, using instruments and equipment to perform tasks requiring precision and consulting with people.

Educational Requirements

The minimum education requirement is **a four year bachelor's degree in a discipline** that has a strong hydrology component such as geography, civil engineering, environmental science, earth sciences, agriculture or forestry. A master's degree is required for some positions. Before enrolling in a bachelor's degree program, prospective hydrologists should discuss their education options with people currently working in the field.

Hydrologists who provide design input for water management infrastructure projects (e.g. dams, canals, stormwater management, pipeline or bridge crossings) must have an engineering degree and Professional Engineer status. For more information, see the Civil Engineer and Environmental Engineer occupational profiles.

Hydrologists who provide geological input must have a degree in geology and Professional Geologist status. For more information, see the Geologist occupational profile.

For information about other suitable degree programs, see the Geographer, Environmental Auditor, Meteorologist, Agrologist and Forester occupational profiles.

Entrance requirements for suitable degree programs vary from one program and institution to another but, in general, include an average of 65 to 80 per cent in English Language Arts 30-1 or English 30, Pure Math 30, Chemistry 30, and two other 30-level subjects (e.g. Physics 30, Math 31 or Social Studies 30). For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

In Alberta, the following post-secondary institutions offer master's and doctoral (PhD) degree programs in hydrology:

- the **University of Alberta** in Edmonton
- the **University of Calgary**
- the **University of Lethbridge**.

Employment and Advancement

(section revised JANUARY 2006)

Hydrologists are employed by:

- resource companies
- civil engineering and environmental consulting firms
- government departments.

Experienced hydrologists may work with Canadian consulting firms overseas or advance to water resource management positions.

Hydrologists are part of the larger National Occupational Classification 2113: Geologists, Geochemists and Geophysicists. In Alberta, most people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,350 Albertans are employed in the Geologists, Geochemists and Geophysicists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since hydrologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for hydrologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Hydrologists' salaries vary considerably depending on their qualifications and the responsibilities of the position.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geologists, Geochemists and Geophysicists occupational group working part-time or full-time earned from **$37,900 to $159,600 a year.** The average salary was **$71,700 a year.**

© Government of Alberta, Human Resources and Employment

Hydrometric Technician/Technologist

Produced SEPTEMBER 2005

Hydrometric technicians and technologists may work independently or provide technical support for hydrologists and related scientists and engineers.

NOC Number(s): 2212.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I d**

Duties

Hydrology is the study of the distribution and circulation of water in the atmosphere, on the surface of the earth and in the sub-surface of the earth.

Duties and responsibilities vary from one position to another but, in general, hydrometric technicians and technologists:

- carry out studies on snowpacks to determine the density and water content prior to melt
- measure rainfall rates and amounts
- place, operate, monitor and calibrate instruments to measure and record the rate of water flow in rivers and streams
- examine, record and interpret water quality through physical inspection, sampling, and physical, chemical and microbiological analysis
- record changing water levels in streams, reservoirs, ponds and wells
- take samples of sediment
- survey lake bottom profiles and compute water volumes in lakes and reservoirs
- process and analyze computer generated data to monitor long term changes and identify trends
- carry out land surveys to obtain cross-sectional areas and topography elevations
- co-ordinate and construct gauging stations.

Working Conditions

Hydrometric technicians often work alone, dividing their time between office work and field work. Field work requires considerable travel and may routinely require lifting up to 10 kilograms. Sometimes, heavier lifting (up to 25 kilograms) is required. Some hydrometric technicians must climb towers to install instruments and radio antennas.

Hours of work can be irregular depending on the season. For example, long hours may be required during spring break-up or flooding. Work during this time can be extremely hazardous. Working conditions can be harsh when working in extreme temperatures.

Personal Characteristics

Hydrometric technicians need the following characteristics:

- good health
- a desire to work outdoors
- a willingness to travel
- the ability to record observations accurately and in an organized manner
- the ability to communicate well in person and in writing
- the ability to work independently with little supervision
- the flexibility required to adapt to new situations and changing technology.

They should enjoy using instruments and equipment to perform tasks requiring precision, and gathering and analyzing information.

Educational Requirements

Most hydrometric technicians and technologists have **related post-secondary education** such as a certificate or diploma in biological or environmental sciences, or university courses in biology, chemistry, biochemistry or environmental science. Experience operating boats, four-wheel drive vehicles and recreational vehicles is an asset.

Post-secondary institutions throughout Alberta offer programs in biology, chemistry, biochemistry, environmental science and related disciplines. Entrance requirements for two year diploma programs in biological/environmental sciences/technology vary from one program to another but generally include a high school diploma or equivalent (or mature student status) with an average of at least 60 per cent in English Language Arts 30-1 or English 30, Biology 20 or 30, Chemistry 20 or 30 and a Grade 11 or 12 math course.

Entrance requirements for university degree programs in biology and related sciences vary from one program to another but generally include a high school diploma with an average of at least 65 per cent (up to 80 per cent for admission to some programs) in English Language Arts 30-1 or English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and one other appropriate Grade 12 subject (Physics 30 is required for admission to some programs). Athabasca University offers distance education programs and has an open admissions policy.

For information about mature student admission policies and entrance requirements for specific programs, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Hydrometric technicians/technologists are employed by the following types of organizations:

- geology and engineering consulting firms
- petroleum and mining companies
- manufacturing, construction and utility companies
- government departments
- educational institutions.

At times, overseas work may be available.

Advancement opportunities depend on the size and nature of the employing organization, and the individual's education and experience.

Hydrometric technicians/technologists are part of the larger National Occupational Classification 2212: Geological and Mineral Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,600 Albertans are employed in the Geological and Mineral Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since hydrometric technicians/technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for hydrometric technicians/technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geological and Mineral Technologists and Technicians occupational group working part-time or full-time earned from **$21,300 to $117,000 a year.** The average salary was **$56,700 a year.**

Hydrometric technicians and technologists generally earn considerably less than the upper end of this range suggests.

Illustrator

Produced JUNE 2005

Illustrators research and create drawings and pictures to visually portray their own or other people's ideas. They may create illustrations for items such as commercial packaging, games, magazines, storybooks, medical textbooks, annual reports, brochures or advertisements.

NOC Number(s): 5241.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M S

Duties

In general, illustrators:

- consult with clients, editors, writers, art directors and others to establish the nature and content of desired illustrations
- prepare preliminary drawings or sketches for approval
- estimate time lines and the cost of materials
- prepare finished artwork using the required medium (e.g. computer graphics, pen and ink, acrylic, pastel, pencil, airbrush).

Most illustrators specialize in a particular field or style of drawing:

- **Advertising illustrators** work on storyboards for commercials and create illustrations for print advertisements, labels and packaging.
- **Book illustrators** create illustrations that convey the spirit of a story and expand on it.
- **Editorial illustrators** create images that support and help communicate the main ideas of articles in newspapers and magazines.
- **Illustrators employed by television studios** create storyboards or courtroom sketches for news broadcasts.
- **Fashion illustrators** sketch models in different poses to emphasize clothing and accessories. They must be familiar with the latest trends in hair, makeup and clothing, and usually work closely with fashion designers or art directors.
- **Medical illustrators** produce realistic and schematic illustrations for medical textbooks, research centres, lectures and other medical purposes. Their illustrations show what a camera cannot (e.g. a cross-section of an organ). Sometimes, medical illustrators are required to create three-dimensional models of their work.
- **Technical illustrators** are employed in a broad range of industrial specialties. For example, they may draw enlarged views of machinery parts for operating manuals, create wildlife illustrations, or draw commercial and residential buildings from structural information provided by blueprints. They spend a lot of time researching the products or subjects they draw and often work closely with engineers or scientists.

Working Conditions

Illustrators usually work in their own homes or in studios. They may sit for long periods of time and must deal with the constant pressure of deadlines.

Personal Characteristics

In addition to the ability to draw or paint, illustrators need the following characteristics:

- the promotional skills required to successfully market their work
- the ability to pay attention to fine details and work quickly to meet deadlines
- good organizational and research skills
- flexibility in working with others' ideas
- a self-motivated and independent work style.

They should enjoy synthesizing information, finding innovative ways to present ideas, taking a methodical approach to tasks requiring precision (e.g. preparing specifications, estimating costs) and consulting with people.

Educational Requirements

Many illustrators have post-secondary training in fine art or graphic design but related post-secondary education is not required to succeed in this field. For information about related post-secondary education programs in Alberta, see the Graphic Designer and Painter/Printmaker occupational profiles. However they are acquired, computer skills and knowledge of illustration software are required.

Most successful freelance illustrators are known for their personal style. Staff or in-house artists may have to be comfortable working with a variety of visual mediums (e.g. computer graphics, acrylic, watercolour, pen, pencil, guache, inks and pastels).

Medical illustrators usually have biomedical training in addition to formal art training. The **University of Toronto** offers a two year Masters of Science degree in Biomedical Communications. For current information about the program, please check the University of Toronto calendar or website.

Technical illustrators often require specialized backgrounds in biology, engineering, architecture or other scientific areas.

Employment and Advancement

(section revised JANUARY 2006)

Most illustrators work on a freelance basis. They may work for:

- publishers (magazine, newspaper, book, web-based resources and other software)
- film studios
- advertising agencies
- graphic design studios
- government departments
- printers.

Medical illustrators work for hospitals, universities, medical schools and pharmaceutical companies.

Fashion illustrators work for:

- department and chain stores
- textile companies
- pattern houses
- garment manufacturers
- fashion designers
- advertising agencies
- newspapers and magazines.

Freelance illustrators negotiate contracts for each illustration or series of illustrations. Contracts specify fees and who will hold the copyright for the work. To obtain freelance contracts, illustrators may market their services on the Internet or in source books, or employ an agent.

Advancement generally takes the form of building a reputation and a larger client group.

Illustrators are part of the larger National Occupational Classification 5241: Graphic Designers and Illustrators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 6,950 Albertans are employed in the Graphic Designers and Illustrators occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since illustrators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for illustrators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Technical or medical illustrators earn significantly higher salaries, starting at about **$40,000** per year. Freelance illustrators negotiate a flat fee for each project. Depending on the client and the reputation of the illustrator, they may negotiate an hourly rate or a set fee ranging from **$150 to $5,000 per illustration (2005 estimates)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Graphic Designers and Illustrators occupational group working part-time or full-time earned from **$15,800 to $92,600 a year.** The average salary was **$37,200 a year.**

© Government of Alberta, Human Resources and Employment

Immigration Officer

Produced MAY 2003

Immigration officers examine immigration applications, visas and passports, and interview people to determine their eligibility for admission, residence or travel in Canada.

NOC Number(s): 1228.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D S**

Duties

In general, immigration officers:

- counsel people who wish to remain in Canada
- make decisions regarding immigration applications for permanent residence, visitor extensions, study or work permits
- interpret laws and explain decisions to people seeking admission or entry to Canada
- arrest and detain or arrange for the removal of inadmissible people
- work in co-operation with other law enforcement agencies to investigate people alleged to be in Canada illegally
- defend their decisions at immigration appeals or in federal court
- administer settlement and language training programs for refugees and other newcomers to Canada
- determine re-eligibility for people claiming refugee status.

Working Conditions

Shift work is a standard requirement for immigration officers at ports of entry. At inland offices located in populated centres, they usually work standard week day office hours. Some travel and occasional overtime may be required.

Most of the people that immigration officers interview are friendly and honest but officers occasionally have to deal with individuals who are hostile or engaged in criminal activities.

Personal Characteristics

Immigration officers need the following characteristics:

- good interpersonal skills
- good communication skills, including interviewing, public speaking and writing skills
- organization and time management skills
- analytical and investigative skills
- common sense and good judgement.

Further, they must be:

- honest
- objective and fair
- co-operative, flexible and patient
- attentive to details.

They should enjoy analyzing information and having clear guidelines for their work, making decisions and dealing with people.

Educational Requirements

The minimum education required for primary inspection and secondary interviewing duties at ports of entry is a **high school diploma**. However, senior positions may require a university degree. Post-secondary education, a second language and experience in dealing with people are definite assets for those seeking employment as immigration officers.

Newly hired immigration officers are placed in a developmental program and trained on the job. After the initial training period, further training in operational and organizational skills is provided on an ongoing basis.

Employment and Advancement

(section revised JANUARY 2006)

Immigration officers are employed by the federal government. Position openings are advertised through the **Public Service Commission of Canada**.

To take advantage of career opportunities, experienced immigration officers may relocate to other locations. Promotion is on a competitive basis and therefore depends on the individual's initiative, interest, competence, employment record and current knowledge of relevant laws and regulations.

Immigration officers are part of the larger National Occupational Classification 1228: Immigration, Employment Insurance and Revenue Officers. In Alberta, people employed in this classification work in the **Public Administration** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** (especially those affecting Public Administration in general and immigration in particular)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Immigration, Employment Insurance and Revenue Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since immigration officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for immigration officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for immigration officers range from **$43,800 to $50,700 per year (2002 estimate)**.

© Government of Alberta, Human Resources and Employment

Industrial Designer

Produced JULY 2005

Industrial designers conceptualize and produce designs for a wide variety of products and systems (e.g. furniture, electronics, appliances, tools, automobiles, sporting goods, architectural details, signage).

NOC Number(s): 2252
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **I M O**

Duties

When designing products, industrial designers must consider:

- how products and product systems work
- how things can be made to work better for people
- safety and health issues
- environmental issues
- consumer preferences and marketing issues
- how ideas can best be presented to others
- what materials to use.

Industrial desginers focus on maximizing the function, value and appearance of products and product systems for the mutual benefit of the user (often the consumer) and the manufacturer.

There are many specialties within industrial design: office furnishings, residential environments, scientific instruments and exhibit systems are just a few examples. The products designed range from one-of-a-kind objects to mass-produced items such as child-proof bottle caps, safety equipment, appliances, sports and leisure products, and toys and games.

In general, the design process involves:

- consulting with clients or manufacturers to establish special market requirements for the products or systems
- analyzing the intended function and user preferences to develop product specifications
- researching production specifications, costs, properties of production materials and manufacturing methods
- preparing formal presentations and reports for client or management approval
- preparing conceptual sketches or drawings and initial prototypes
- consulting with engineering design and production staff, model makers and marketing staff.

Industrial designers work closely with other members of the development group (e.g. managers, marketing personnel, engineers, manufacturing specialists). They often are involved in activities such as new product planning and market research. Sometimes, they monitor the manufacture of their designs in a factory.

In addition to product and system design, industrial designers may provide advice regarding client image: corporate identity systems, communication systems, interior space planning and exhibit design, and advertising and packaging.

Working Conditions

Industrial designers work in offices and workshops. Long hours and weekend work may be required to meet deadlines.

Personal Characteristics

Industrial designers need the following characteristics:

- good communication skills
- problem-solving abilities, particularly the ability to conceptualize problems in new ways to find innovative yet practical solutions
- good business sense

- good project management skills
- the ability to work well with others in a multi-disciplinary environment.

They should enjoy synthesizing information and conducting research, experimenting with different ways of doing things, and performing precise tasks with tools and equipment.

Educational Requirements

Industrial design combines visual arts and technology, and requires knowledge and skills in fields such as:

- ergonomics (relating product design to human and environmental factors)
- mechanics and engineering techniques
- materials and processes
- drafting, sketching and model making (for prototypes)
- social and consumer trend analysis
- aesthetics
- marketing and basic business practices.

The computer plays an increasingly important role in all aspects of design including documentation, illustration, rendering, animation, drafting and 3-D modelling. However, it is still necessary for designers to have manual skills in drawing, drafting, model making and working with materials.

With this broad range of requirements, industrial designers may come from a variety of educational backgrounds. Many industrial designers have bachelor's degrees in industrial design, fine arts, engineering or architecture or a background in graphic design. After graduation, ongoing professional development is required to keep up to date in this field.

In Alberta, the following institutions offer programs specifically in industrial design.

- The **University of Alberta** in Edmonton offers a four year Bachelor of Design (B.Des.) degree program with a specialization in Industrial Design and Visual Communication Design. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30) and four of the following: Biology 30, Chemistry 30, Physics 30, Math 30 or Pure Math 30, Math 31, Science 30, Social Studies 30, a 30-level language other than English, one approved fine arts subject. Applicants must submit a portfolio of their work. The University of Alberta also offers master's degree programs in Art and Design.
- The **University of Calgary** offers a Master of Environmental Design degree program with a specialization in industrial design. The entrance requirement is a bachelor's degree from a recognized university with a grade point average of at least 3.0/4 (or equivalent) in the final two years of study.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about education programs in related fields, see the appropriate occupational profiles (e.g. Architect, Civil Engineer, Graphic Designer, Illustrator).

Employment and Advancement

(section revised JANUARY 2006)

Industrial designers may be self-employed and work on a contract basis, or they may be employed full-time by manufacturers, non-profit organizations or private design firms. Many graduates of industrial design programs find jobs in major centres in Eastern Canada or outside of Canada. Some students use industrial design education as preparation for entry into architecture, design management, marketing or other aspects of business.

Industrial designers may transfer their skills to other fields such as:

- technical sales/marketing with manufacturers (for more information, see the Technical Sales Representative occupational profile)
- exhibition and trade show design and fabrication (for more information, see the Exhibit Designer occupational profile)
- information design areas such as the design of natural and historical interpretation centres.

In Alberta, over 75 per cent of people employed as industrial designers work in the following industries:

- **Professional and Technical Services**
- **Other Manufacturing**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Wood Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 500 Albertans are employed in the Industrial Designers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Most industrial designers work on a contract basis for specific product and system designs, and negotiate each contract separately. Designers who have specialized skills can charge higher fees.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial Designers occupational group working part-time or full-time earned from **$21,500 to $98,000 a year.** The average salary was **$46,800 a year.**

© Government of Alberta, Human Resources and Employment

Industrial Engineer

Produced JUNE 2004

Industrial engineers determine the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

NOC Number(s): 2141
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Industrial engineers design, improve and implement integrated systems of human beings, materials and equipment to produce needed results efficiently. For example, they may be involved with:

- planning how systems will work
- measuring work performance
- establishing work standards and specifications
- ensuring quality standards
- analyzing cost benefits
- enhancing operations management.

Industrial engineers apply knowledge and skills from social as well as physical disciplines (e.g. mathematics, statistics, engineering, chemistry, physics, psychology and sociology) to solve problems in a wide variety of industries (e.g. education, agrifood, environment, distribution and transportation, health care, pharmaceuticals, manufacturing). They may specialize in facility layout and design, production planning, logistics systems design, or management and planning.

Facility layout and design specialists:

- evaluate proposed sites for facilities
- design new buildings or redesign existing ones, taking into account factors such as the product and people flow of the workplace (e.g. shipping and receiving requirements, packaging methods), energy consumption and employee safety
- decide where machines, equipment and offices should be located to achieve maximum production at minimum cost
- create ergonomic work stations designed to reduce worker fatigue, eliminate unnecessary work steps and increase productivity.

To evaluate proposed sites, they investigate:

- labour supplies
- transportation options for moving people, raw materials and finished goods
- fuel, power, water and utility costs and supplies
- sanitary and waste disposal systems
- fire protection
- the cost of land, buildings and taxes.

Production planning specialists:

- evaluate production systems, equipment, work methods and products
- develop operating systems which reduce costs and increase quality and production
- use computers to analyze information about existing systems and simulate new ones
- devise work methods and determine how much work each machine or employee must produce to meet production quotas
- establish methods of paying employees for the kind and amount of work they do
- plan systems to check the quality of finished products.

Logistics systems specialists are concerned with:

- the movement of materials and information from the purchasing of raw materials through to production, distribution, servicing and recycling
- preventative maintenance systems design and planning
- customer service
- inventory development
- transportation
- development of effective information systems
- market needs analysis and strategic planning.

Management and operations specialists plan work patterns, systems and procedures, and make recommendations regarding improvements. They:

- develop and set up systems to control work flow, materials flow, paperwork and quality assurance of products and services
- set costs and budget limits
- assess how well the arrangements, methods, systems and procedures are working on an ongoing basis.

Working Conditions

Because this engineering discipline is so varied in its applications, working conditions also vary. Some industrial engineers spend most of their working day observing production, asking questions and watching how work is done. Others work primarily in an office environment, writing specifications and meeting with other engineers and technologists.

Some overtime may be required to meet deadlines. Extended periods of travel may be required for international projects.

Personal Characteristics

Industrial engineers need the following characteristics:

- curiosity
- imagination
- good communication skills
- the ability to visualize the effects of change
- an interest in people and systems.

They should enjoy working on their own as well as with teams, making decisions, being creative and having variety in their work.

Educational Requirements

Undergraduate degree programs in industrial engineering are offered by:

- **University of Regina**
- **University of Manitoba** in Winnipeg
- **Ryerson University** in Toronto
- **University of Toronto**
- **University of Windsor**
- **Concordia University** in Montreal
- **Ecole Polytechnique de Montreal**
- **University of Quebec**
- **Dalhousie University** in Halifax
- **University of Moncton**.

For current information about programs and admission policies, please check post-secondary calendars or websites. Generally, the minimum admission requirement for university programs in engineering is a high school diploma with an acceptable average in specified Grade 12 subjects such as English 30, Pure Math 30 and 30-level sciences.

In Alberta, the **University of Calgary** offers an undergraduate degree program in Manufacturing Engineering that includes industrial engineering content. The admission requirement is a high school diploma with an overall average of 78 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Industrial engineers can use their skills in almost any type of organization and are more widely distributed among industries than other engineers. They may work for:

- consulting firms
- financial institutions
- government institutions
- health care institutions
- manufacturing and industrial plants
- transportation companies
- insurance companies
- department stores.

Industrial engineers are part of the larger National Occupational Classification 2141: Industrial and Manufacturing Engineers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Other Manufacturing**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 900 Albertans are employed in the Industrial and Manufacturing Engineers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since industrial engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for industrial engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial and Manufacturing Engineers occupational group working part-time or full-time earned from **$25,700 to $113,200 a year.** The average salary was **$68,600 a year.**

Industrial Engineering Technologist

Produced OCTOBER 2004

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

NOC Number(s): 2233.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M d**

Duties

Industrial engineering is concerned with people as well as machines and materials. This field combines engineering with management training and is primarily concerned with developing effective, organized work systems that are people-oriented and cost-conscious.

Industrial engineering technologists ensure that products are manufactured or services are provided in economical, efficient ways that meet or exceed customer expectations by:

- examining the overall production process or delivery system of the operation to determine best time study practices
- introducing statistical performance measurements to analyze and improve operations
- analyzing materials handling methods and recommending ergonomic solutions to problems, safe work practices and cost efficiencies.

Industrial engineering technologists may also:

- analyze production problems such as an inadequate supply of components, materials or personnel
- verify the consistency and reliability of product quality, taking into account such factors as time, cost and quality control standards
- design new systems and improve existing systems concerned with the production and distribution of products, services, inventory and plant maintenance
- conduct surveys and feasibility studies for locating new plants
- develop manufacturing, materials handling and process plant layouts
- develop work measurement standards and evaluation systems
- devise wage incentive systems and implement job evaluation systems
- assist in testing and implementing management information systems
- design and modify equipment
- manage productivity improvement projects.

A variety of job titles are used in this occupation including manufacturing technologist, operations management technologist, operations research technologist, production control technologist and quality assurance technologist.

Working Conditions

Industrial engineering technologists usually work regular hours in offices and research labs, and on production floors.

Because they analyze the effectiveness of work teams as well as processes, industrial engineering technologists may interact with dozens of people on a regular basis. They use computers to simulate production and service processes and for word processing and spreadsheet functions.

Personal Characteristics

Industrial engineering technologists need the following characteristics:

- an aptitude for mathematics and science

- the ability to visualize abstract concepts and relationships
- excellent communication and leadership skills
- patience
- the ability to work independently or as a team member
- a desire to be thorough and accurate.

They should enjoy working with people, data, machines, computers, instruments, details and concepts; finding innovative solutions for problems; analyzing information and being methodical and directing the work of others on a project team.

Educational Requirements

The minimum educational requirement for industrial engineering technologists is a related **two year technology diploma**. For information about directly related programs that are offered in Alberta, see the Automated Systems Technologist and Mechanical Engineering Technologist occupational profiles.

The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Certificate of Achievement in Operations Management program through Continuing Education.

Outside of Alberta, three year Industrial Engineering Technology programs are offered by the **College of the North Atlantic** in St. John's, Newfoundland and **Mohawk College of Applied Arts and Technology** in Hamilton, Ontario.

Other Requirements

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Industrial engineering technologists may be employed full-time or work on a contract basis for:

- consulting and industrial firms
- manufacturing and processing companies
- insurance companies
- financial institutions
- transportation companies
- hospitals
- governments.

Technologists may start as trainees doing routine work under the direction of industrial engineers or experienced industrial engineering technologists. As they acquire experience and further knowledge they are given more responsible assignments. Experienced industrial engineering technologists may become production managers or quality control supervisors.

Industrial engineering technologists are part of the larger National Occupational Classification 2233: Industrial Engineering and Manufacturing Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,450 Albertans are employed in the Industrial Engineering and Manufacturing Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since industrial engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for industrial engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial Engineering and Manufacturing Technologists and Technicians occupational group working part-time or full-time earned from **$20,800 to $83,100 a year.** The average salary was **$68,200 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

© Government of Alberta, Human Resources and Employment

Information Systems Consultant

Produced JULY 2004

Information systems consultants analyze, design and develop information systems business solutions and provide advice on a wide range of information systems issues.

NOC Number(s): 2171.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

Information systems consultants help organizations operate as efficiently and effectively as possible by developing information technology solutions for business problems.

Many common functions in for-profit and not-for-profit organizations are supported by information systems and technology:

- business communication systems
- finance and cost management
- procurement and materials
- operations (management, manufacturing, engineering, logistics, distribution)
- customer and market management
- human resource management.

Information systems consultants help people in all parts of organizations to define their information-related requirements and develop appropriate information systems. Where appropriate, consultants assess the fit of available applications and adapt existing software for particular uses. In some situations, they may be involved in the design or restructuring of business processes supported by information systems.

There are five phases in developing an information system:

- preliminary investigation (including conducting business or technical studies, where necessary, and preparing cost/benefit analyses)
- more detailed system requirements investigation (including data and process modelling)
- system analysis and design (including evaluation of existing software)
- system development and testing
- system implementation, evaluation and maintenance.

When acting as project managers, information systems consultants oversee the work of computer programmers who write the programs or integrate system components required for an information system.

To keep up to date with new developments in the computer industry, information system consultants must spend a considerable amount of time reading and attending seminars and conferences.

For information about systems analysts who specialize in particular aspects of system design, see the Systems Security Analyst, Information Systems Quality Assurance Analyst and Systems Auditor occupational profiles.

Working Conditions

Information systems consultants usually work standard office hours in office environments. Private consultants spend much of their time in clients' offices and may travel for extended periods of time.

Evening and weekend work is sometimes required to implement new systems or meet project deadlines.

Personal Characteristics

Information systems consultants need the following characteristics:

- the ability to think logically and analytically
- the ability to pay close attention to detail
- the ability to work independently, in teams and as group facilitators
- the ability to express ideas and solutions in clear, understandable language.

They should enjoy analyzing business problems and finding innovative solutions, taking a methodical approach to work that requires precision, and taking responsibility for projects that require planning, decision-making and co-ordinating the work of others.

Educational Requirements

(section revised JULY 2005)

Information systems consultants need a combination of technical expertise and business-related training or experience. A four year university degree in computer science is a good starting point. However, few consultants are hired directly out of university, unless they have previous business experience. Most computer science graduates must first gain experience in computer programming, and acquire education or experience related to business administration or management.

Information systems consultants must continuously upgrade their knowledge to keep up with changing methods and technologies.

In Alberta, the following institutions offer four year degree programs in computer science:

- **Athabasca University** (a distance education institution)
- **DeVry Institute of Technology**, a private vocational school in Calgary
- **Grande Prairie Regional College** in Grande Prairie (collaborative degree program with Athabasca University)
- **Grant MacEwan College** in Edmonton (degree granted by the University of Lethbridge)
- **The King's University College** in Edmonton
- the **University of Alberta** in Edmonton and Camrose
- the **University of Calgary**
- the **University of Lethbridge**.

With the exception of the Athabasca and DeVry programs, the minimum admission requirement for the above programs is a high school diploma or equivalent with a specified minimum average (ranging from 60 to 80 per cent) in five appropriate Grade 12 subjects including English 30 and Pure Math 30. Math 31 and Physics 30 are recommended.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

All of the universities listed above also offer business-related degree programs.

Continuing education programs are often offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Many organizations employ information systems consultants to provide consulting services for the whole organization. Private information systems consultants are hired on a contract basis for specific projects (see the Management Consultant profile).

Many information systems consultants start off as computer programmers and, with experience and additional training, move into information systems management. Further advancement opportunities depend on the size and nature of the organization, and the consultant's qualifications.

Information systems consultants are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,050 Albertans are employed in the Information Systems Analyst and Consultants occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 350 to 520 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since information systems consultants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for information systems consultants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Income figures for information system consultants vary, depending on their responsibilities, education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Information Systems Business Analysts and Consultants occupational group earned **up to $75,600 a year**. Those with three years of experience earned from **$29,700 to $56,700 a year.** The average salary was **$66,200 a year**.

Information Systems Quality Assurance Analyst

Produced JULY 2004

Information systems quality assurance analysts develop and implement policies and procedures to ensure customer satisfaction, maximum performance and overall quality of software products and information systems.

NOC Number(s): 2171.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

Developing software and information systems involves a number of processes:

- consulting users to define what the software/system must be able to do (complex software/systems have hundreds of required capabilities)
- analyzing requirements and designing software/systems to meet those requirements
- developing, testing and implementing software/systems (and redeveloping and retesting until software/systems meet specified requirements)
- evaluating and maintaining software/systems to ensure that they meet customer requirements and specifications.

Information systems quality assurance analysts are involved in all of these stages of software/system development. At each stage, they develop and implement policies and procedures to improve the efficiency, effectiveness and overall quality of software products and information systems. For example, in the development stage, they may lead unit testing.

Duties and responsibilities vary from one job to another, but generally include:

- developing quality standards and validation techniques
- researching, developing, implementing and documenting test plans and test scripts
- evaluating automated testing tools
- making recommendations about ways to improve software/system quality.

Quality assurance analysts may test software/systems themselves, work with software/system users or work with systems testers (for more information, see the Systems Tester profile). They may also be involved in training software/system users.

Working Conditions

Information systems quality assurance analysts usually work standard office hours in office environments. Evening/weekend work may be required to meet project deadlines.

Personal Characteristics

Information systems quality assurance analysts need the following characteristics:

- the ability to think logically and analytically
- the ability to pay close attention to detail
- the ability to work well in teams and on their own
- the ability to express complex concepts in clear, understandable language.

They should enjoy analyzing problems and finding innovative solutions, and taking responsibility for projects that require planning, decision-making and co-ordinating the work of others.

Educational Requirements

(section revised JULY 2005)

Information systems quality assurance analysts need related post-secondary education and several years of computer programming or testing experience (for more information, see the Computer Programmer and Systems Tester profiles). Successful completion of an examination is required to qualify for the designation Certified Software Quality Engineer (CSQE) from the **American Society for Quality**.

There are a wide variety of degree, diploma and certificate programs related to computer science offered by universities, colleges, technical institutes and private vocational schools. For a list, see the Computer Programmer occupational profile. Prospective quality assurance analysts should talk to potential employers about required and preferred qualifications before enrolling in an education/training program.

Information systems quality assurance analysts must continuously upgrade their knowledge because computer technology is constantly changing.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Information systems quality assurance analysts are employed by information technology consulting firms, and in the IT departments of large organizations in both the private and public sectors. Some quality assurance analysts are self-employed.

Many analysts start off as computer programmers or systems testers and, with experience, move into quality assurance analyst positions. Depending on the size of the organization and the analyst's qualifications, experienced quality assurance analysts may advance to supervisory positions. Those who have business experience or training may move into information systems consulting positions or establish their own consulting firms.

Information systems quality assurance analysts are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,050 Albertans are employed in the Information Systems Analyst and Consultants occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 350 to 520 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since information systems quality assurance analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for information systems quality assurance analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Income figures for information system quality assurance analysts vary, depending on their responsibilities, education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Information Systems Quality Assurance Analysts occupational group earned from **$37,400 to $73,800 a year.** The average salary was **$68,500 a year**.

Instrument Technician

Produced FEBRUARY 2006

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

NOC Number(s): 2243
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Instrument technicians work with a wide variety of pneumatic, electronic and microcomputer instruments used to measure and control variables such as pressure, flow, temperature, level, motion, force and chemical composition. In general, they:

- consult manufacturers' manuals to determine test and maintenance procedures
- use pneumatic, electrical and electronic testing devices to inspect and test instrument and system operation, and diagnose faults
- practice loss management principles
- consult with and advise process operators
- train apprentices
- repair, maintain and adjust system components or remove and replace defective parts
- do risk assessments
- calibrate and maintain components and instruments according to manufacturers' specifications
- work with engineers on basic design
- install and maintain instruments on new or existing plant equipment and processes
- interpret and use appropriate CSA, ISA and API installation standards and practices.

Working Conditions

Working conditions can change dramatically from one job to another. Instrument technicians working with manufacturing processes may be exposed to confined or high places, noisy, dusty, cold or unusually warm conditions. There may also be exposure to radiation devices and laser equipment. Instrument technicians may work regular week-day hours or in shifts. Sometimes they are on call at night and on weekends.

There is some risk of injury, particularly when processing dangerous chemicals or working with substances under pressure or at high temperatures.

Instrument technicians may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Instrument technicians need the following characteristics:

- the ability to pay careful attention to details
- good communication and reading skills
- manual dexterity
- patience
- good mathematical, scientific and mechanical abilities
- the ability to keep up to date with changes in technology.

They should enjoy problem-solving and working with little direction or supervision.

Educational Requirements

To work in Alberta, instrument technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least Alberta Math 20 or 23 or Pure Math 20 or Applied Math 20 and 10 credits in a high school science (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school or post-secondary graduates who have strong backgrounds in the chemical and physical processes involved in instrumentation. Courses in math, physics and chemistry are particularly important.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training in the first and second year and a minimum of 1,425 hours of on-the-job training and ten weeks of technical training in the third and fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Instrument technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Grande Prairie
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Keyano College** in Fort McMurray offers a one year Industrial Instrumentation Technology transfer program. The second year is offered at SAIT. The entrance requirement is a high school diploma with English 30 or 30-1, Math 30 or Pure Math 30, Chemistry 30 and Physics 30.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Instrumentation Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, one of Physics 30, Chemistry 30 and Science 30 and Pure Math 30 or successful completion of Transitional Mathematics 101 or at least 65 per cent in Alegbra 35.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Instrumentation Engineering Technology diploma program. The entrance requirement is an Alberta high school diploma or equivalent with at least 55 per cent in Pure Math 30 or Math 30, English 30 or 33 or English Language Arts 30-1 or 30-2, Physics 20 and Chemistry 20 or Science 30.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Graduates of engineering technology programs who have two years of successful work experience in industry may apply for certification by the Alberta Society of Engineering Technologists (ASET). Members of ASET can use the designation CET (Certified Engineering Technologist) and RET (Registered Engineering Technologist).

Employment and Advancement

With industry becoming increasingly automated, instrument technicians are needed virtually anywhere there are control and metering systems. They are employed in the following industries:

- pulp and paper processing
- hydro power generation
- mining, petrochemical and natural gas
- industrial and commercial manufacturing
- industrial construction
- industrial instrument servicing.

Experienced instrument technicians may advance to supervisory positions, be employed as engineering technicians or move into company sales offices. Alberta certified journeyman instrument technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Instrument technicians are part of the larger National Occupational Classification 2243: Industrial Instrument Technicians and Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Construction**
- **Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**
- **Repair, Maintenance, Personal and Other Services**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,900 Albertans are employed in the Industrial Instrument Technicians and Mechanics occupational group which is expected to grow 2.6 to 3.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 140 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since instrument technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for instrument technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice instrument technicians earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$25 to $40 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial Instrument Technicians and Mechanics occupational group working part-time or full-time earned from **$19,300 to $103,100 a year.** The average salary was **$64,700 a year.**

© Government of Alberta, Human Resources and Employment

Instrumental Musician

Produced MAY 2003

Instrumental musicians play musical instruments. They perform as soloists or with orchestras, small ensembles or popular bands before live audiences, in recording studios or in workshop situations.

NOC Number(s): 5133.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Instrumental musicians usually specialize in playing one instrument or type of instrument. They play almost every day, practicing on their own or in rehearsals with other musicians, or in live performances or recording sessions. They may be required to:

- sight read musical parts quickly and accurately during rehearsals
- play from musical scores, music charts or from memory
- improvise as they play.

To expand their musical repertoire, musicians are constantly learning new pieces. However, they may have a number of standards that they play at performances, depending on the instrumental group, the audience and the setting. They may perform in live shows such as ballets, operas, musical theatre and cabarets, providing the musical background, or appear as guest artists with orchestras and small ensembles or with popular music bands.

Popular musicians work with a variety of people: other performers, managers who handle their business affairs, booking agents, promoters, music publishers, producers, recording directors, songwriters, club owners, talk show hosts and radio announcers.

Working Conditions

Instrumental musicians work long hours. Practices and rehearsals are usually held during the day; performances are held most often in the evenings and on weekends. Musicians often must travel on tour or to wherever they can find work (clubs, taverns and concerts halls). They may have to lift and carry instruments and accessories weighing up to 10 kilograms.

Personal Characteristics

Musicians need the following characteristics:

- the discipline required to practice regularly
- the ability to creatively interpret music
- the money management skills required to deal with highly variable incomes
- good communication skills
- a co-operative nature and the ability to accept constructive criticism
- the ability to handle the pressures of performing in public.

Since musicians work in a very competitive business, it helps if they are:

- determined and confident
- dependable and flexible
- able to handle themselves well in business negotiations.

Musicians should enjoy playing musical instruments and entertaining audiences.

Educational Requirements

(section revised JANUARY 2006)

In addition to musical talent, musicians need good business skills and a working knowledge of the music and entertainment business. In particular, they need to know how to keep records, negotiate contracts, keep financially afloat and promote themselves.

Classical musicians usually start training at an early age, either on the piano or a stringed instrument. Most brass, percussion and wind instrument players begin their music studies in school in grades 5 to 7. Few musicians are self-taught. Formal music training of some kind is required to sight read music and understand music theory, harmony and improvisation.

Once students have developed a certain level of competence on an instrument, they may audition for community bands and orchestras to gain experience playing in a group with a musical director or conductor.

Formal music training is available through private lessons and through programs offered at post-secondary institutions and music conservatories (e.g. the Royal Conservatory in Toronto or the McGill Conservatory in Montreal). In Alberta, the following post-secondary institutions offer music programs:

- **Alliance University College** offers a four year BA in Music. The entrance requirement is five senior matriculation level courses including English and math with an minimum overall average of 60 per cent.
- **Banff Centre for the Arts** offers intensive workshops with world-class musicians and conductors. Applicants must submit a portfolio, project description and resume. An audition tape may be required.
- **Canadian Nazarene University College** in Calgary offers a three and four year BA in Music. The entrance requirement is a high school diploma with a minimum average of at least 60 per cent in five Grade 12 subjects including English, and math or a second language.
- **Canadian University College** in College Heights offers three year and four year degree programs in Music. The entrance requirement is a high school diploma with English 30 and at least three other 30-level courses.
- **Concordia University College of Alberta** in Edmonton offers a three year degree program in Music. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **Gardner College - A Centre for Christian Studies** in Camrose offers a two year Music Performance diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33.
- **Grande Prairie Regional College** offers a two year Music Acoustic diploma program. The entrance requirement is a high school diploma with English 30, Music 30 and Grade 2 conservatory music theory (or equivalent). A placement exam and an audition are required.
- **Grant MacEwan College** in Edmonton offers a two year Music diploma program with a specialization in performance. The emphasis in this program is on jazz and commercial music. The entrance requirement is a high school diploma or equivalent.
- **Keyano College** in Fort McMurray offers one year certificate and two year diploma programs in Music. The entrance requirement is a high school diploma with English 30 or 33 and an audition.
- **The King's University College** in Edmonton offers three year and four year degree programs in Music. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **Mount Royal College** in Calgary offers a two year Music Performance diploma program with a specialization in orchestral instruments. The entrance requirements are a high school diploma or equivalent, performance skills equivalent to Grade 10 Conservatory, an audition and a placement test in music theory, history and keyboard.
- **Red Deer College** offers a two year Music diploma program with a specialization in performance. The entrance requirements are a high school diploma with English 30 or 33, an audition and an examination.
- **Rocky Mountain College** in Calgary offers a four year BA in Music. The entrance requirement is four matriculation level courses including English with a minimum average of 65 per cent in the four courses.
- **University of Alberta** in Edmonton offers four year degree programs and five year combined degree programs in Music. The entrance requirement is a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: a 30-level language other than English, a second 30-level language other than English, Biology 30, Chemistry 30, Physics 30, Math 30, Pure Math 30, Math 31, Science 30, one approved Fine Arts subject. An audition, music rudiments exam and aural skills exam are required. The University of Alberta in Camrose also offers bachelor degree programs in music.
- **University of Calgary** offers a four year degree program with a specialization in performance (keyboard or orchestral instrument). The entrance requirements are a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Music 30 or one

five credit Grade 12 subjects. An audition and interview are also required.

- **University of Lethbridge** offers four year degree programs and five year combined degree programs with an applied specialization including studio courses and ensemble activity. The entrance requirement are an average of at least 65 per cent in English 30 and three other appropriate 30-level subjects plus a fifth Grade 12 subject, an appropriate music background and an audition.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Entering music competitions is another way of testing one's performance skills, gaining recognition and exposure, and earning money through winning scholarships and awards. For popular musicians, winning a major talent contest may provide the opportunity to produce a professional recording or music video.

As the music video business grows, it is important for musicians to know how to perform on camera. At some point in their careers, successful popular musicians usually need to produce a music video to gain wider recognition. It is also important to be computer literate because recording equipment is often digital.

Employment and Advancement

(section revised JANUARY 2006)

Instrumental musicians must audition to find work. Classical musicians who perform mostly with symphony orchestras and small ensembles audition before committees comprised of musicians and the music director. Popular musicians (e.g. jazz, rock, country and folk musicians) often send demo tapes to booking agents, bar and nightclub owners and entertainment promoters. Once musicians have established their reputations, they may be called to play at particular gigs or bookings, or to play for specific recording sessions.

The music industry is intensely competitive. Talent, versatility and flexibility in accepting work away from home are crucial for maintaining a viable career as a musician. Being able to play more than one instrument is a definite asset. Freelance and popular musicians who play in recording sessions are usually able to play a number of different styles of music. Those who are fortunate enough to sign contracts with record companies may record their own songs or cover other people's tunes. Independent recording artists may market their products and services via the Internet.

Some musicians work as accompanists for other performers or choral groups.

Classical musicians may work with:

- symphony orchestras
- wind ensembles
- chamber orchestras and music groups
- string ensembles
- brass ensembles
- recording studios
- Broadway-type shows.

When they have passed all the requirements for orchestral positions, classical musicians may be offered yearly contracts with insurance and pension benefits. Employment in an orchestra may provide little outlet for creativity, since the same music is played over and over and there is often insufficient rehearsal time.

Exceptional players may become principal players, doing more solo work and assuming responsibility for rehearsing other musicians in their sections. The lead player in the whole orchestra is a violinist called the concertmaster. Some orchestral players may become conductors, composers, orchestrators or arrangers.

Musicians playing popular music such as jazz, rock and country may work:

- in nightclubs, lounges and dance halls
- as session players for other artists
- on cruise ships and in resort hotels
- for private parties and benefits
- in recording studios
- at music festivals
- on tour in concert halls or large stadiums.

Freelance or popular musicians must constantly improve their techniques, creating new possibilities. Popular musicians must be extremely flexible in their hours of work, places of employment and types of contracts.

Breaking into the music business requires dedication, talent and sometimes good luck. Developing contacts in the music business is as important as finding opportunities to perform.

Instrumental musicians are part of the larger National Occupational Classification 5133: Musicians and Singers. In Alberta, most people employed in this classification work in the following industries:

- **Educational Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,950 Albertans are employed in the Musicians and Singers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since musicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for musicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Many musicians are members of the American Federation of Musicians of the United States and Canada. This association sets minimum wage guidelines, with different fee schedules for different settings. For example, musicians playing as sidemen with top recording artists earn substantially more than members of small rock bands playing in hotel bars.

Many musicians must work at other part-time jobs to supplement their income. Some work in music-related jobs such as arranging, artist management, composing and song writing. Teaching music, either independently or in affiliation with an institution or organization, is the way most Alberta musicians supplement their incomes.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Musicians and Singers occupational group earned **up to $47,500 a year.** Those with three years of experience earned from **$16,500 to $39,700.** The average salary was **$33,000 a year.**

Instrumentation Engineering Technologist

Produced NOVEMBER 2003

Instrumentation engineering technologists apply their knowledge of pneumatic, electronic and microcomputer measurement and control systems in business, engineering and industry settings.

NOC Number(s): 2232.1, 2241.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M; O I M**

Duties

Pneumatic, electronic and microcomputer instruments are used to measure and control pressure, flow, temperature, level, chemical composition and other variables in industrial processes. Instruments range in complexity from simple mechanical float level controls to complex computer-based systems.

Duties and responsibilities vary from one position to another in this emerging occupation. Instrumentation engineering technologists may:

- work in engineering offices with engineers and others to design, specify, size and select measurement and control systems
- install, operate, maintain, trouble-shoot and repair pneumatic, electronic and microcomputer-based equipment in industrial plant and field environments
- recommend and implement modifications to improve measurement and control systems
- program and configure microprocessor-based measurement and control systems
- work for vendors in technical sales and service roles (for more information, see the Technical Sales Representative occupational profile).

Working Conditions

Instrumentation engineering technologists may be employed in design, maintenance or construction environments. Those in design work primarily indoors. Those in maintenance and constuction may work outdoors at processing facilities or construction sites. They may work standard weekday hours or shifts, be on call or required to work overtime to meet project deadlines or trouble-shoot problems.

Personal Characteristics

Instrumentation engineering technologists need the following characteristics:

- an interest in and aptitude for math, chemistry and physics
- the ability to visualize three-dimensional objects from two-dimensional drawings
- persistence
- good communication skills
- the interpersonal skills required to work in a team environment.

They should enjoy doing precise work, obtaining and analyzing test results, finding innovative solutions to problems and taking a methodical approach to their work.

Educational Requirements

(Section revised MAY 2005)

The minimum educational requirement for instrumentation engineering technologists is a related **two-year engineering technology diploma**.

In Alberta, the following post-secondary institutions offer directly related programs:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Instrumentation Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, one of Physics 30, Chemistry 30 and Science 30 and Pure Math 30 or successful completion of Transitional Mathematics 101 or at least 65 per cent in Alegbra 35.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Instrumentation Engineering Technology diploma program. The entrance requirement is an Alberta high school diploma or equivalent with at least 55 per cent in Pure Math 30 or Math 30, English 30 or 33 or English Language Arts 30-1 or 30-2, Physics 20 and Chemistry 20 or Science 30.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Instrumentation engineering technologists who wish to become certified instrument technicians must complete the Instrument Technician apprenticeship program. NAIT and SAIT program graduates qualify for 600 hours of work experience credit toward the first and second periods of apprenticeship and may challenge third and fourth period exams. For more information, see the Instrument Technician occupational profile.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Instrumentation engineering technologists are employed by:

- engineering firms
- oil, gas and petrochemical companies
- pulp and paper mills
- food processors
- chemical plants
- mining companies
- meter and controls design and sales companies.

Many instrumentation engineering technologists are employed in technical sales and service positions. For more information, see the Technical Sales Representative occupational profile.

Experienced technologists may advance to supervisory or managerial positions or move into self-employment in consulting or other service businesses.

In Alberta, instrumentation engineering technologists are part of two larger National Occupational Classifications: 2232 Mechanical Engineering Technologists and Technicians and National Occupational Classification 2241 Electrical and Electronics Engineering Technologists and Technicians.

Over 75 per cent of people employed in the Mechanical Engineering Technologists and Technicians classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

Over 75 per cent of people employed in the Electrical and Electronics Engineering Technologists and Technicians classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Other Manufacturing**

- **Oil and Gas Extraction**
- **Public Administration**
- **Educational Services**
- **Management, Administrative and Other Support Services**
- **Construction**.

The employment outlook in these occupational groups will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,750 Albertans are employed in the Mechanical Engineering Technologists and Technicians occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Over 6,500 Albertans are employed in the Electrical and Electronics Engineering Technologists and Technicians occupational group which is expected to grow 2.4 to 3.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover.

(**Note**: Since instrumentation engineering technologists form only a part of the larger occupational groups on which these forecasts are based, only a portion of the new positions created will be for instrumentation engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for instrumentation engineering technologists vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the:

- Mechanical Engineering Technologists and Technicians occupational group working part-time or full-time earned from **$24,400 to $100,500 a year.** The average salary was **$67,000 a year.**
- Electrical and Electronics Engineering Technologists occupational group working part-time or full-time earned from **$22,100 to $126,100 a year.** The average salary was **$74,400 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Insulator

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Insulators apply, remove and repair thermal and acoustical insulation (e.g. calcium silicate, glass foam, mineral wool, styrofoam, fibreglass) on all types of industrial equipment (e.g. duct piping, heat exchangers, tanks, vessels).

NOC Number(s): 7293
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M O i**

Duties

Duties vary from one position to another but, in general, insulators:

- read and interpret drawings and specifications to determine insulation requirements
- select the amount and type of insulation to be installed and a method of securing the insulation (e.g. spraying, pinwelding, wiring, pasting, strapping, taping) depending on the type and shape of surface, whether or not the equipment is cold or hot, inside or outside and how the equipment will be used
- measure and cut insulating material and coverings to the required shape and dimension
- fit insulation around obstructions or shape insulation materials and protective coverings
- install vapour barriers and finish insulated surfaces by applying metal cladding, canvas, plastic sheeting or cement
- remove or seal off old asbestos insulation.

Working Conditions

Insulators work both indoors and outdoors, often in uncomfortable or potentially hazardous circumstances: in very hot or cold settings, on ladders or scaffolding, in cramped areas or with materials that are dusty, itchy or toxic. They must observe safety precautions and use equipment such as respirators, coveralls and safety glasses or goggles. Insulators may work a 40-hour, five-day week or work 40 hours in four days. Some overtime may be required to meet construction deadlines. Those employed in the maintenance of industrial plants may work shifts.

Insulators may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Insulators need the following characteristics:

- manual dexterity
- the agility required to work in cramped spaces
- the ability to work in high places
- the ability to work in hot and cold environments.

They should enjoy doing precision work.

Educational Requirements

To work in Alberta, insulators must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,375 hours of on-the-job training and six weeks of technical training in the first and second year, a minimum of 1,300 hours of on-the-job training and eight weeks of technical training in the third and a minimum of 1,600 hours of on-the-job training in the fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Insulator apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Insulators are employed by construction companies, insulation contractors and industrial plants. This occupation is subject to business cycle swings that can lead to periodic high levels of unemployment.

Insulators may advance to supervisory positions such as foreman, general foreman or superintendent, or advance to estimator positions. Alberta certified journeyman insulators who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as insulators work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,000 Albertans are employed in the Insulators occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice insulators earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 80 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $24 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Insulators occupational group working part-time or full-time earned from **$22,400 to $78,900 a year.** The average salary was **$53,500 a year.**

Insurance Adjuster

Produced NOVEMBER 2005

Insurance adjusters investigate insurance claims, make recommendations regarding the payment of benefits from insurance policies, and negotiate payments and settlements.

NOC Number(s): 1233.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Insurance claims may be the result of events such as auto accidents, fires, explosions, industrial accidents, burglaries, product defects, embezzlement, professional errors or aircraft mishaps. In general, adjusters:

- investigate the causes and origins of an insurance claim
- determine whether the event giving rise to the claim is covered by the insured person's policy
- obtain evidence that there has been, in fact, a loss covered by the policy.

When insurance claims are presented, adjusters:

- determine whether or not the policy holder is responsible (e.g. for an accident)
- obtain evidence that the amount being claimed is proper
- negotiate settlements
- advise the parties involved.

Determining and documenting the validity of a claim often involves interviewing or corresponding with policy holders, claimants and witnesses. It also involves obtaining statements and copies of documents from police officers, medical personnel and others who have specialized expertise.

Insurance adjusters employed by insurance companies are called staff or company adjusters; those who work on a fee basis are called independent adjusters. Independent adjusters may be self-employed or work for an independent adjusting firm.

Working Conditions

Experienced adjusters work alone most of the time. While they are training, they work under close supervision. They may work primarily in an office environment writing reports and making phone calls, or often work away from the office interviewing people and gathering evidence. Depending on the nature of the claims they handle, adjusters may have to do a significant amount of travelling to inspect damage and interview claimants, witnesses and police officers. Having to defend their decisions in mediation, settlement conferences and mini-trials can be stressful.

Evening and weekend work is sometimes required. Adjusters may be on call after regular office hours.

Personal Characteristics

Insurance adjusters need the following characteristics:

- the ability to remain calm and impartial when they are dealing with people who may be excited or under extreme stress
- the ability to put claimants at ease
- the ability to work on several projects at the same time
- strong organizational skills.

They should enjoy analyzing information and taking a methodical approach to their work, negotiating with people and making decisions.

Educational Requirements

Insurance adjusters need a combination of related education and on the job experience.

Employers prefer to hire people who have at least a high school diploma. Some post-secondary education is a definite asset. Adjusters who do out-of-the-office investigations need a driver's license.

The following courses are normally taken by people already employed in the insurance field:

- The **Insurance Institute of Canada** (IIC) offers a ten course distance education program leading to the Chartered Insurance Professional (CIP) designation. The program is also offered through evening courses at designated post-secondary institutions. CIPs may go on to complete the IIC Fellowship Program to earn a FCIP designation.
- The **Alberta Safety Council** offers one week On Scene Collision Investigation Levels I and II courses.

In Alberta, the following post-secondary institutions offer education programs related to insurance and risk management:

- **Academy of Learning**, a private vocational school in Calgary, Edmonton, High River and Red Deer, offers a 23 week Insurance Advisor program. The entrance requirement is a high school diploma or equivalent.
- **The Business Career College**, a private vocational school in Edmonton, offers a 26 week Insurance and Financial Services program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Grant MacEwan College** in Edmonton offers a diploma program in Management Studies with a specialization in insurance and risk management. The program takes 13 months to complete if started in September or 15 months if started in January. Graduates of the program earn credit for nine of twelve courses toward the Insurance Institute of Canada's CIP designation. Applicants must have at least 50 per cent in English Language Arts 30-1 or English 30 (or 75 per cent in English 33) and Pure Math 30, Math 30 or Math 31 (or 65 per cent in Applied Math 30). Grant McEwan College also offers evening non-credit CIP courses.
- **Mount Royal College** in Calgary offers a two year diploma program in Business Administration and Insurance that includes two four month work terms. Graduates of the program earn advanced standing toward the Insurance Institute of Canada's CIP designation. The entrance requirement is a high school diploma with English Language Arts 30-1 and Pure or Applied Math 30, or equivalent. Mount Royal also offers a Life License Qualification Program through Continuing Education.
- The **University of Calgary** offers four year and five year (co-op) Bachelor of Commerce degree programs with a specialization in risk management and insurance. Some of the courses in the program are those required for the CIP designation but not all CIP courses are offered. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 or English 30, Pure Math 30 and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a language 30 other than English, one five credit Grade 12 subject. The University of Calgary also offers a Risk Management Certificate program through Continuing Education.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Before enrolling in an education program, prospective adjusters should discuss their training options with potential employers.

Other Requirements

In Alberta, insurance adjusters must be licensed by the Alberta Insurance Council. Applicants must meet education and work experience requirements.

Employment and Advancement

(section revised JANUARY 2006)

Some insurance adjusters begin as clerical workers or telephone adjusters in the claims departments of insurance companies or in independent adjusting firms, and gradually expand their knowledge and experience in the field.

With additional training, telephone adjusters can be promoted to claims examiner, field adjuster, supervisor or claims manager positions.

Insurance adjusters are part of the larger National Occupational Classification 1233: Insurance Adjusters and Claims Examiners. In Alberta, most people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,150 Albertans are employed in the Insurance Adjusters and Claims Examiners occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since insurance adjusters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for insurance adjusters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full time in the Insurance Adjusters and Claims Examiners occupational group earned up to **$89,400 a year.** The average salary was **$40,100 a year.**

Insurance Agent/Broker

Produced NOVEMBER 2005

Insurance agents and brokers assess people's financial needs and advise them on how to protect themselves against financial loss. They may sell life, property, casualty, automobile or health insurance policies to individuals, businesses or public institutions.

NOC Number(s): 6231
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Insurance agents represent insurance companies either as employees of a company or as independent representatives.

Insurance brokers represent their clients. They are under contract to a number of insurance companies and place policies directly with whichever company can best serve the needs of individual clients.

Insurance agents/brokers may sell various types of policies that generally fall into two broad categories: life insurance and property/casualty insurance.

- Life insurance policies provide payment to survivors (beneficiaries) when the person whose life is insured dies. A life insurance policy also can be designed to provide retirement income, educational funds for surviving children or other benefits.
- Property/casualty insurance policies including automobile policies, protect against financial loss from damage, theft or liability lawsuits. They may be personal or commercial insurance policies.

Some agents and brokers sell specialized types of insurance such as marine insurance, farm and crop insurance, or medical and dental insurance.

Agents and brokers also:

- develop clientele by generating lists of prospects (people who may need risk management information and insurance products) and visiting them to discuss their risk management and insurance needs
- inspect property to determine its general condition, type of construction, age and other characteristics to decide if it fits company underwriting standards
- build policies to suit clients' needs
- keep in touch with clients to help them keep their insurance programs up to date
- monitor insurance claims such as property damage or a death in the family
- attend meetings, seminars and programs to keep up to date and learn new skills.

Working Conditions

Hours of work vary in this occupation. Agents and brokers may work evenings and weekends prospecting clients, making calls or catching up on paperwork.

Personal Characteristics

Insurance agents and brokers need the following characteristics:

- excellent oral and written communication skills
- the ability to work independently
- good business judgement
- a genuine interest in helping people achieve their financial goals
- persuasive persistence (an enthusiastic attitude when faced with disappointing sales and clients who say no)
- a willingness to keep up to date with new information about tax laws, amendments to pension and benefit plans, and other changes

- a willingness to pay attention to the details that satisfy client needs.

They should enjoy compiling information and taking a methodical approach to their work, persuading and working with people and making decisions.

Educational Requirements

Most employers require applicants to have at least a high school diploma. However, the insurance business is very competitive and many agents and brokers have post-secondary education.

Some agents and brokers learn the basics on the job before taking the courses and examinations required for the professional designation Chartered Insurance Professional (CIP) offered by the **Insurance Institute of Canada (IIC)**. Others take related courses or post-secondary programs before they are hired. CIPs may go on to complete the Fellowship CIP Program.

The **Independent Insurance Brokers Association of Alberta (IIBAA)** and IIC offer intensive short courses that qualify graduates to become licensed insurance brokers. IIBAA also offers a four course program leading to the designation Canadian Accredited Insurance Broker (CAIB).

In Alberta, the following post-secondary institutions offer education programs related to insurance and risk management:

- **Academy of Learning**, a private vocational school in Calgary, Edmonton, High River and Red Deer, offers a 23 week Insurance Advisor program. The entrance requirement is a high school diploma or equivalent.
- **The Business Career College**, a private vocational school in Edmonton, offers a 26 week Insurance and Financial Services program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Grant MacEwan College** in Edmonton offers a diploma program in Management Studies with a specialization in insurance and risk management. The program takes 13 months to complete if started in September or 15 months if started in January. Graduates of the program earn credit for nine of twelve courses toward the Insurance Institute of Canada's CIP designation. Applicants must have at least 50 per cent in English Language Arts 30-1 or English 30 (or 75 per cent in English 33) and Pure Math 30, Math 30 or Math 31 (or 65 per cent in Applied Math 30). Grant McEwan College also offers evening non-credit CIP courses.
- **Mount Royal College** in Calgary offers a two year diploma program in Business Administration and Insurance that includes two four month work terms. Graduates of the program earn advanced standing toward the Insurance Institute of Canada's CIP designation. The entrance requirement is a high school diploma with English Language Arts 30-1 and Pure or Applied Math 30, or equivalent. Mount Royal also offers a Life License Qualification Program through Continuing Education.
- The **University of Calgary** offers four year and five year (co-op) Bachelor of Commerce degree programs with a specialization in risk management and insurance. Some of the courses in the program are those required for the CIP designation but not all CIP courses are offered. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 or English 30, Pure Math 30 and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a language 30 other than English, one five credit Grade 12 subject. The University of Calgary also offers a Risk Management Certificate program through Continuing Education.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Before enrolling in an education program, prospective agents and brokers should discuss their training options with potential employers.

Other Requirements

In Alberta, insurance agents and brokers must be licensed by the Alberta Insurance Council. Applicants must meet education and work experience requirements.

Employment and Advancement

(section revised JANUARY 2006)

Insurance agents work for:

- general insurance companies

- brokerage firms
- independent insurance agencies
- financial planning firms.

Summer employment is a good way to gain practical experience. Insurance companies often interview students on college and university campuses. Or, interested individuals can set up their own appointments to discuss opportunities with local insurance company managers. Job applicants may be asked to complete screening questionnaires or attend further interviews.

Experienced, successful insurance agents and brokers may move into supervisory and management positions, or head office jobs in administration, training, underwriting, sales promotion or branch management.

In Alberta, most people employed as insurance agents and brokers work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,700 Albertans are employed in the Insurance Agents and Brokers occupational group, which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Agents and brokers may be paid a salary, work on a commission basis or a combination of both. Their incomes vary considerably depending on the employer, the employee's abilities and educational background, the geographic area and the responsibilities of the position.

Usually, newly hired agents and brokers are paid a base salary and look after existing client accounts. To encourage finding new clients, they often receive a percentage of commissions for the new business they attract. Some agents receive commissions from day one, although most choose to receive a salary for six months or longer while they establish a client base.

Most agents and brokers pay their own car and travel expenses. If they operate their own businesses, other overhead expenses may include office rent and staff salaries.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Insurance Agents and Brokers occupational group working part-time or full-time earned from **$17,600 to $112,800 a year.** The average salary was **$41,900 a year.**

Insurance Underwriter

Produced NOVEMBER 2005

Insurance underwriters evaluate the risks involved in applications for insurance and, on behalf of the insurance company, decide whether or not to accept those risks. They may work for life insurance companies or general insurance companies.

NOC Number(s): 1234
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

When insurance agents and brokers sell insurance policies to individuals and organizations, they present applications for insurance to insurance company underwriters. When applications are received, underwriters:

- review applications to ensure that the requested coverage fits the risk exposure
- check details to ensure that the insurance company is receiving a premium corresponding to the risk it is taking and guard against fraudulent requests for coverage
- discuss rates, risks, regulations and coverages with agents and brokers.

Underwriters work within corporate policies, principles and rules for the acceptance of normal risks. If they decide that a risk is not acceptable, they may:

- adjust the premium or the coverage to make the risk acceptable
- propose modifications to the coverage or plan deductible
- spread the risk via subscription policies with other companies or a reinsurance company
- refuse the application for coverage.

In addition to underwriting new applications, underwriters are responsible for analyzing changes requested during the term of the policy and reviewing the risk for renewal. Depending on the company and product line, they also may check policies issued by others to ensure that guidelines are followed, coverage fits risks and rates are correct.

Insurance underwriters spend much of their time on the phone with and writing letters to insurance agents and brokers, people in other insurance company departments (e.g. claims and legal departments) and others.

Working Conditions

Insurance underwriters usually work in an office setting but may travel within a specified territory. Because agents often press for quick answers, an underwriter's job can be stressful. Most companies use computers extensively to speed up decision making and reduce paper flow.

Personal Characteristics

Insurance underwriters must be:

- analytical
- organized
- detail-oriented
- good with numbers
- inquisitive
- objective and able to make sound decisions
- able to negotiate with brokers.

They should enjoy co-ordinating information and taking a methodical approach to their work, working with people and making decisions.

Educational Requirements

Most insurance companies prefer to hire underwriting trainees who have some post-secondary education. Underwriters usually take two to five years to be become fully qualified by taking related courses and gradually taking on more responsibility. They must be able to analyze reports from other departments (e.g. claims, accounting) and keep up to date with current affairs and changes that affect their work.

Most general insurance companies encourage their underwriters to take a program of study offered by the **Insurance Institute of Canada.** The program leads to the designation Chartered Insurance Professional (CIP). Courses can be taken by correspondence or through designated post-secondary institutions.

Education and certification programs for life insurance underwriters are offered by the **Life Office Management Association (LOMA)** and **ADVOCIS The Financial Advisors Association of Canada**.

In Alberta, the following post-secondary institutions offer education programs related to insurance and risk management:

- **Academy of Learning**, a private vocational school in Calgary, Edmonton, High River and Red Deer, offers a 23 week Insurance Advisor program. The entrance requirement is a high school diploma or equivalent.
- **The Business Career College**, a private vocational school in Edmonton, offers a 26 week Insurance and Financial Services program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Grant MacEwan College** in Edmonton offers a diploma program in Management Studies with a specialization in insurance and risk management. The program takes 13 months to complete if started in September or 15 months if started in January. Graduates of the program earn credit for nine of twelve courses toward the Insurance Institute of Canada's CIP designation. Applicants must have at least 50 per cent in English Language Arts 30-1 or English 30 (or 75 per cent in English 33) and Pure Math 30, Math 30 or Math 31 (or 65 per cent in Applied Math 30). Grant McEwan College also offers evening non-credit CIP courses.
- **Mount Royal College** in Calgary offers a two year diploma program in Business Administration and Insurance that includes two four month work terms. Graduates of the program earn advanced standing toward the Insurance Institute of Canada's CIP designation. The entrance requirement is a high school diploma with English Language Arts 30-1 and Pure or Applied Math 30, or equivalent. Mount Royal also offers a Life License Qualification Program through Continuing Education.
- The **University of Calgary** offers four year and five year (co-op) Bachelor of Commerce degree programs with a specialization in risk management and insurance. Some of the courses in the program are those required for the CIP designation but not all CIP courses are offered. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 or English 30, Pure Math 30 and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a language 30 other than English, one five credit Grade 12 subject. The University of Calgary also offers a Risk Management Certificate program through Continuing Education.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Before enrolling in an education program, prospective underwriters should discuss their training options with potential employers.

Employment and Advancement

(section revised JANUARY 2006)

Underwriters in the field of general insurance are usually employed by local insurance companies which are usually located in larger cities. Life insurance underwriters are usually employed in company head offices.

With experience, underwriters advance to assessing more complex risks such as commercial property risks or auto fleets, and quoting premiums on risks (determining prices and conditions to offer for proposed policies).

After qualifying for the CIP designation, a general insurance underwriter may move into more advanced technical areas of underwriting, management or other departments (e.g. marketing). Some underwriters become independent insurance agents or enter the field of reinsurance or brokering. All insurance agents and independent adjusters must be licensed (for more information, see the InsuranceAdjuster and Insurance Agent/Broker occupational profiles).

In Alberta, most people employed as insurance underwriters work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)

- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,700 Albertans are employed in the Insurance Underwriters occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Insurance Underwriters occupational group working part-time or full-time earned from **$25,100 to $89,700 a year.** The average salary was **$43,500 a year.**

Interactive Media Developer

Produced JULY 2004

Interactive media developers are computer specialists who write, modify, integrate and test computer code for internet applications, computer-based training software, computer games, film, video and other interactive media.

NOC Number(s): 2174.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

Duties vary from one job to another in this rapidly evolving occupation but, in general, interactive media developers:

- program animation software for interactive CDs, DVDs, video game cartridges and internet-based applications
- program special effects software for film and video applications
- write, modify, integrate and test software code for e-commerce and other internet applications
- assist in the collection and documentation of user requirements
- assist in the development of logical and physical specifications
- research and evaluate interactive media software products.

To keep up to date with new developments, interactive media developers share information via e-mail and web-based resources, attend technical training courses and conferences and read computer-related journals, magazines and newsletters.

Working Conditions

Intervactive media developers usually work in offices equipped with sophisticated information technology. Overtime may be required to meet project deadlines.

Some travel may be required.

Personal Characteristics

Interactive media developers need the following characteristics:

- the ability to think logically and abstractly
- the ability to pay close attention to details
- the ability to work alone or as part of a team
- an active interest in keeping up with technological advances.

They should enjoy analyzing problems to find innovative solutions and taking a methodical approach to work that requires precision.

Educational Requirements

(section revised FEBRUARY 2006)

This is a new field so many people currently working as interactive media developers started in other occupations (e.g. graphic designer, software engineer, writer). There are **no standard education requirements** but most employers prefer to hire applicants who have at least two years of related post-secondary education or experience.

Interactive media developers must continuously upgrade their knowledge because computer technology is constantly changing.

There are a wide variety of degree, diploma and certificate programs related to computer science offered by universities, colleges, technical institutes and private vocational schools throughout Alberta. For a list, see the Computer Programmer occupational profile. Before enrolling in a program, prospective students should discuss their education options with experienced interactive media developers and potential employers.

The following post-secondary education institutions offer programs specifically related to multimedia development and design:

- **Academy of Learning**, a private vocational school in Edmonton South, offers a 52 week Multimedia Developer for the Internet program.
- **Alberta College of Art and Design** in Calgary offers a four year Bachelor of Fine Arts degree program in Media Arts and Digital Technologies.
- **The Banff Centre** offers a Banff New Media Institute program.
- **DevStudios**, a private vocational school in Edmonton, offers a 30 week e-Media and Design diploma program, a 36 week 3D Animation and Digital Compositing program and a 22 week Digital Audio Specialist program.
- **Grande Prairie Regional College** offers a two year Visual Arts diploma program with a specialization in interactive digital design.
- **Grant McEwan College** in Edmonton offers a two year Digital Arts and Media diploma program.
- **GURU Digital Arts College** in Edmonton offers a 24 week Digital Media Producer program.
- **Lethbridge Community College** offers a 16 month Multimedia Production diploma program.
- **Medicine Hat College** offers a three year diploma program and a four year degree program in Visual Communications with a major in digital media design.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Digital and Interactive Media Design certificate program.
- **Prestwick College**, a private vocational school in Calgary offers a 26 week CIW Master Designer Plus program.
- **Red Deer College** offers a 21 week Multimedia Web Developer Certificate program.
- **Southern Alberta Institute of Technology** in Calgary offers a two year New Media Production and Design diploma program.
- **Sprott-Shaw Community College** in Calgary offers 45 week Digital Animation and Digital Media Arts programs and a part-time Computer Graphics and Web Media program.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Fine Arts degree program in Visual Communications.
- The **University of Lethbridge** offers a four year Bachelor of Fine Arts degree program specializing in New Media.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Interactive media developers are employed by:

- computer software development firms
- interactive software publishers
- media production companies
- information technology consulting firms.

They may also work in the information technology units of large private or public sector organizations, or be self-employed.

Experienced interactive media developers may move into related occupations such as web designer or webmaster.

Interactive media developers are part of a larger computer programmers occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 11,300 Albertans are employed in the Computer Programmers and Interactive Media Developers occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 380 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since interactive media developers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for interactive media developers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for interactive media developers vary depending on the responsibilities of the position and the person's education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Interactive Media Developers occupational group working part-time or full-time earned from **$27,000 to $100,000 a year.** The average salary was **$47,100 a year.**

Interior Decorator

Produced MARCH 2005

Interior decorators assist clients in co-ordinating the decorative aspects of interior spaces.

NOC Number(s): 6421
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Interior decorators decorate private residences, hotels, restaurants, schools, universities, office buildings, factories and clubs. They may decorate new spaces, re-decorate existing ones or decorate for special events such as weddings.

Many interior decorators specialize in residential interiors. They select, co-ordinate or place:

- finishes such as wallpaper, paint and floor coverings
- window treatments
- furnishings
- pictures and decorative accessories.

Duties and responsibilities vary from one position to another but, in general, interior decorators:

- consult with clients to determine colour and style preferences, needs and budgetary requirements
- submit decorating recommendations, colours and samples for approval
- select appropriate materials and colours on their own or with the client
- supervise the purchase of materials
- co-ordinate the delivery and installation of materials.

Interior decorators employed in department stores, furniture stores and other retail establishments sell the store's merchandise through the decorating service. Some decorators represent a particular manufacturer's product line.

Working Conditions

Working conditions for interior decorators vary depending on their place of employment. They may work days, evenings and weekends and spend a great deal of time in clients' homes. Hours of work can be irregular where decorators have to adapt their schedules to suit client needs.

The work may involve frequently lifting items that weight up to 10 kilograms. Heavier lifting may be required in some work settings. Decorating windows may require working from ladders to measure dimensions.

Personal Characteristics

Interior decorators need the following characteristics:

- excellent verbal and written communication skills, especially the ability to listen carefully and communicate images clearly
- good spatial perception and the ability to visualize three dimensions from two-dimensional drawings
- a keen interest in fashion and home decor
- creativity and drawing ability
- the ability to work well with all types of people
- sales ability
- patience and flexibility
- the ability to deal with the pressure of deadlines
- mathematical ability.

They should enjoy having clear rules and organized methods for their work, selling merchandise and working with a variety of materials.

Educational Requirements

(section revised MAY 2005)

To acquire the necessary skills in identifying colour, proportion, balance and detail, interior decorators may **learn on the job or take related training programs**. In general, employers prefer to hire applicants who have:

- a high school diploma
- experience or training in interior decorating and sales
- a vehicle for business use.

Some employers prefer to hire graduates of post-secondary programs in interior design or visual arts (for more information, see the Interior Designer occupational profile).

In Alberta, the following institutions offer interior decorating programs:

- **Bow Valley College** in Calgary offers an eight month Interior Decorating and Merchandising certificate program. Applicants must have at least 60 per cent in English Language Arts 20-1 or 30-2 and in a Grade 10 level math, or Grade 12 or equivalent.
- **Lakeland College** in Lloydminster and Sherwood Park offers a Residential Decorating certificate of training program through Continuing Education.
- **Mount Royal College** in Calgary offers an eight course (136 hours) Residential Decorating Extension Certificate program through the Faculty of Continuing Education and Extension. Applicants must be at least 18 years of age.
- The **University of Alberta** Faculty of Extension in Edmonton offers a 351 hour Residential Interiors certificate program. Applicants must be at least 18 years of age and have a high school diploma (or equivalent) including English 30 or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Architects Act, Interior Design Regulation, the Alberta Association of Architects (AAA) oversees interior designer certification which entitles designers to practice a portion of the scope of practice defined in the Architects Act and Regulations. You do **not** have to be registered if you do not practice as or use the title Licensed Interior Designer.

Employment and Advancement

(section revised JANUARY 2006)

Interior decorators are employed by:

- department stores
- paint and wallpaper retail outlets
- furniture stores
- carpet outlets
- fabric and window covering suppliers
- construction industry suppliers (e.g. kitchens, lighting or bathroom fixtures)
- decorating services
- manufacturing firms.

Some interior decorators work on a freelance basis and purchase merchandise from retail outlets. Establishing a successful decorating service requires extensive work experience, good business skills, equipment such as a digital camera and colour printer, and sufficient funds to purchase supplies before customers pay for them.

Interior decorators are part of the much larger National Occupational Classification 6421: Retail Salespersons and Sales Clerks. In Alberta, most people employed in this classification work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 62,550 Albertans are employed in the Retail Salespersons and Sales Clerks occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since interior decorators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for interior decorators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

After completing their on-the-job training, most interior decorators work on a commission basis. Incomes therefore vary greatly depending from one person to another, and from one month to another. Some decorators working on commission are required to reimburse the employer for costs when they make mistakes.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sales Retail Salespersons and Sales Clerks occupational group working part-time or full-time earned from **$10,400 to $154,800 a year.** The average salary was **$25,900 a year.**

© Government of Alberta, Human Resources and Employment

Interior Designer

Produced MARCH 2005

Interior designers create and enhance interior spaces to improve quality of life, increase productivity and protect public health, safety and welfare.

NOC Number(s): 5242
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M S**

Duties

Interior designers plan new interiors and renovate existing ones in commercial buildings (e.g. offices, institutions, stores, hotels and restaurants) and single and multi-family dwellings. Their responsibilities vary from one position or project to another but, in general, interior designers:

- identify and analyze client needs and goals, safety requirements, budget limitations and project schedules
- prepare preliminary plans and design concepts for client approval
- estimate costs
- develop presentations for client approval, including drawings, sketches, renderings, perspectives, colour and material boards, photographs or models
- prepare working drawings and specifications for nonload-bearing construction including materials, finishes, millwork and furnishings
- prepare tender documents, co-ordinate the bid process and assist clients in awarding contracts
- confirm that required building and other code permits are obtained
- collaborate with professional and technical consultants (e.g. mechanical and electrical engineers, architects, audio-visual consultants)
- conduct field reviews of construction and installation of furnishings, fixtures and equipment
- review and evaluate projects on behalf of clients, during implementation and upon completion.

Interior designers co-ordinate their work with other professionals and work closely with general contractors to ensure that their drawings are interpreted correctly. They may co-ordinate the activities of trades (e.g. painters, carpenters) when there is no general contractor.

Interior designers are concerned with general and detailed planning, spatial arrangements, health and safety issues, detailing, constructability and technical considerations (e.g. lighting and acoustics) as well as the aesthetics of a space. They are more involved with technical considerations than interior decorators are. Decorators focus on the ornamental and moveable aspects of interiors (colour, furniture, rugs, drapery) and fixed details (e.g. moldings) that can easily be added to an existing space (for more information, see the Interior Decorator occupational profile).

Working Conditions

Working conditions vary considerably in this occupation. Interior designers frequently meet with clients, other consultants and contractors in clients' workplaces and homes, in interior design offices, in consultants' offices and at work sites. Work hours are sometimes long or irregular and may include weekends and evenings.

Personal Characteristics

Interior designers need the following characteristics:

- creative ability and imagination
- the ability to visualize spatial relationships in three dimensions
- good oral, written and graphic communication skills
- an interest in attending to details

- the ability to work on several projects in different stages of development at the same time
- the ability to deal with the pressure of deadlines
- the ability to work well with people from a wide variety of backgrounds.

They should enjoy synthesizing information to develop plans and design concepts, taking a methodical approach to work requiring precision, and working with people.

Educational Requirements

There are no standard education requirements for interior designers in Alberta. However, to be licensed by the Alberta Association of Architects, interior designers must have **a degree in interior design plus related experience**, or an equivalent combination of education and experience.

In Alberta, **Mount Royal College** in Calgary offers a four year Bachelor of Applied Interior Design degree program. The entrance requirement is an average of at least 60 per cent in five appropriate Grade 12 subjects, including Pure Math 30 and at least 65 per cent in English 30 or equivalent. A portfolio and pre-testing are required.

The following post-secondary institutions offer two year interior design diploma programs which are not and cannot be accredited by the Foundation for Interior Design Education Research at this time. Graduates of these programs are not eligible for professional registration without further education and a longer period of work experience (see Other Requirements below).

- **Lakeland College** in Vermilion offers a two year Interior Design diploma program. The entrance requirement is a high school diploma or equivalent with Pure or Applied Math 30 (or Math 33) and at least 65 per cent in English Language Arts 30-1 or English 30 (or 75 per cent in ELA 30-2 or English 33). Applicants must complete an assignment. This program is accredited by the National Kitchen and Bath Association.
- **Lethbridge Community College** offers a two year Interior Design and Merchandising diploma program. The entrance requirement is a high school diploma with at least 60 per cent in a Grade 12 math. Alternate admission requires successful completion of a computerized placement test.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Interior Design Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30, and one of the following: Physics 30 (recommended), Science 30 or Chemistry 30. This is a quota program so admission is competitive.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Architects Act and Interior Design Regulation, the Alberta Association of Architects (AAA) oversees interior designer licensing which entitles designers to practice a portion of the scope of practice defined in the Architects Act and Regulations. You do **not** have to be licensed if you do not practice as or use the title Licensed Interior Designer.

Only registered members of the Interior Designers of Alberta may use the title Registered Interior Designer. Membership requires successful completion of a National Council for Interior Design Qualification exam.

Employment and Advancement

(section revised JANUARY 2006)

Interior designers are employed by:

- interior design firms
- architectural firms
- institutions such as schools, universities and hospitals
- building development companies
- corporate planning offices
- hotels and restaurants
- manufacturers
- government planning offices
- property management companies.

Graduates of recognized four year degree programs usually begin work in interior design and architectural offices, or the planning departments of corporations or institutions. Graduates of two year diploma programs may find employment in

these types of offices or as salespeople in the furnishing departments of retail stores, home furnishing chains, building supply centres, drapery suppliers, office supply firms and housing tract developers. Experience gained in sales positions may not be eligible for credit toward professional recognition.

In Alberta, over 75 per cent of people employed as interior designers work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,650 Albertans are employed in the Interior Designers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Interior Designers occupational group working part-time or full-time earned from **$23,600 to $141,600 a year.** The average salary was **$49,800 a year.**

Internal Auditor

Produced NOVEMBER 2005

Internal auditors conduct financial, systems and operational audits in their organizations. (External auditors are usually accountants who are not part of the organization being audited.)

NOC Number(s): 1111.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M i d**

Duties

Internal auditors systematically collect and analyze information about the organization's management framework, internal controls, information systems, procedures and outputs to:

- compare current structures and performance against established standards
- identify risks to efficiency, economy, effectiveness and corporate values
- ensure compliance with legislation and regulations
- determine the extent to which factors affecting performance, accountability and the safeguarding of assets are being identified, reported and effectively monitored.

Internal auditors also:

- examine whether the objectives of the organization and its programs or lines of business are understood by employees, and are reflected in the organization's plans, decision-making, and authority and accountability structure
- provide consulting services to improve their organizations' operations and ability to accomplish objectives
- conduct pre-implementation audits to determine if systems and programs under development will work as planned
- ensure that appropriate controls are in place to minimize risks
- report findings to management and make recommendations.

Working Conditions

To perform detailed reviews, internal auditors must travel to the offices being audited. This may mean travelling across the city or across the country depending on the organization. Hours of work are usually standard office hours but overtime may be required at year end or to meet project deadlines.

Personal Characteristics

Internal auditors need the following characteristics:

- high ethical standards
- objectivity and sound judgment
- initiative
- the ability to think analytically, independently and creatively
- the ability to work effectively on their own or with others at all levels of the organization
- good communication skills in person and in writing
- good organizational skills
- the ability to adapt to change.

They should enjoy being methodical and persistent, finding innovative solutions to problems and working with others.

Educational Requirements

Auditors come from various backgrounds including accounting, business, information systems, engineering or economics. Some employers require a university degree that directly relates to the nature of the organization's business.

In general, the minimum qualification is a bachelor's degree or a professional designation such as:

- Certified Internal Auditor (CIA) from the **Institute of Internal Auditors** in Florida
- Certification in Control Self-Assessment Auditor (CCSA), also from the Institute of Internal Auditors
- Chartered Accountant (CA) from the **Institute of Chartered Accountants of Alberta**
- Certified Management Accountant (CMA) from the **Society of Management Accountants of Alberta**
- Certified General Accountant (CGA) from **Certified General Accountants of Alberta**.

Information systems auditors may qualify for the Certified Information Systems Auditor (CISA) designation from the **Information Systems Audit and Control Association** in Illinois. For more information, see the Systems Auditor occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Internal auditors are employed by:

- medium and large corporations
- federal, provincial and municipal government departments
- financial institutions
- non-profit organizations.

Some corporations use internal audit as a training ground for management positions. Internal auditors get a good overall perspective of an organization's operations because they are usually responsible for auditing all areas. They also make recommendations directly to senior management and have access to the Board of Directors through the Audit Committee. Advancement opportunities are therefore good.

Internal auditors are part of the larger National Occupational Classification 1111: Financial Auditors and Accountants. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Finance, Insurance and Real Estate**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 26,400 Albertans are employed in the Financial Auditors and Accountants occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 390 to 660 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since internal auditors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for internal auditors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Financial Auditors occupational group working part-time or full-time earned from **$19,300 to $139,500 a year.** The average salary was **$57,200 a year.**

Interpreter

Produced MARCH 2005

Interpreters translate the spoken word from one language to another.

NOC Number(s): 5125.3
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I s**

Duties

Interpreters may translate during pauses in a monologue (consecutive interpretation) or interpret immediately as words are spoken at conferences and meetings(simultaneous interpretation via headphones). Simultaneous interpreters generally work in teams, each person working for 20 minute periods during a session.

In addition to translating spoken words, translators may provide background cultural information or identify and resolve conflicts related to the meaning of words, concepts, practices or behaviour.

In alphabetical order, the most commonly translated languages in Canada are:

- Chinese
- English
- French
- German
- Japanese
- Polish
- Punjabi
- Russian
- Spanish
- Vietnamese.

For information regarding sign language interpreters, see the Sign Language Interpreter occupational profile.

Working Conditions

Interpreters often work evenings and weekends to provide services at conferences and meetings.

Personal Characteristics

Interpreters need the following characteristics:

- able to articulate and respond quickly
- inquisitive
- meticulous
- interested in researching information in new areas.

They should enjoy variety, precision and creativity, and working with people.

Educational Requirements

(section revised JULY 2005)

Interpreters should have training and experience in written translation prior to training in interpreting (for more information, see the Translator occupational profile). A Bachelor's degree in one or more languages is recommended.

The best practical training for interpreters is to spend a considerable length of time living in the culture of the targeted language.

European standards for translators and interpreters require at least two or more languages in addition to their mother tongue. Studying or living in Europe is excellent preparation for translating with international organizations.

The only interpreter training programs in Canada are at the **University of Ottawa**. The entrance requirement for these one and two year diploma programs is a related university degree, certificate or diploma plus relevant experience. Accreditation from a professional association of translators or interpreters, or equivalent work experience, is also required. Applicants must pass an entrance exam.

In Alberta, many post-secondary institutions offer courses in various languages. The following institutions offer full programs in one or more languages or other programs related to interpretation:

- **Athabasca University** offers three year and four year Bachelor of Arts (BA) degree programs in French by distance education. Applicants must be at least 16 years of age and live in North America.
- **Concordia University College of Alberta** in Edmonton offers a three year BA program in French. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate 30 level subjects.
- The **University of Alberta** in Edmonton offers:
    - Bachelor of Arts (BA) programs in Germanic Languages (German, Scandinavian, Norwegian), Latin, Romance Languages (French, Italian, Portuguese, Spanish), Slavic languages (Polish, Russian and Ukrainian), and East Asian Languages (Chinese and Japanese). The entrance requirement is an average of at least 65 per cent in English 30, a 30-level language other than English and three other appropriate 30-level subjects (Social Studies 30 recommended). Some of these programs are offered in Camrose.
    - a certificate in Translation Studies in French, German and Spanish (which can be obtained while completing BA requirements).
    - programs in French and French-Canadian through the Faculte St-Jean. All instruction is in French.
    - master's and doctoral (PhD) degree programs with a specialization in translation. The admission requirement is an acceptable average in a related four year bachelor degree (or equivalent) program.
- The **University of Calgary** offers four year and five year (co-op) BA degree programs in French, German, Russian and Spanish. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in English 30 and four of the following: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a language 30 other than English and one five credit Grade 12 subject.
- The **University of Lethbridge** offers four year degree programs in French, German and Spanish. The entrance requirement is an average of at least 65 per cent in English 30 and three other appropriate 30 level subjects plus a fifth Grade 12 subject.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Association of Translators and Interpreters of Alberta (ATIA) offers certification for Court Interpreters.

Employment and Advancement

(section revised JANUARY 2006)

Few interpreters, other than those in government, are employed full-time or part-time. Interpreters generally work on a fee-for-service basis:

- at meetings and conferences
- in courts of law or legal hearings
- during visits by foreign dignitaries
- during medical or psychological assessments
- accompanying trade delegations
- for government translation bureaus.

Advancement generally takes the form of building a more extensive client base.

Interpreters are part of the larger National Occupational Classification 5125: Translators, Terminologists and Interpreters. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**

- **Educational Services**
- **Information, Culture and Recreation.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Translators, Terminologists and Interpreters occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since interpreters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for interpreters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Freelance interpreters charge hourly fees that depend on their education, background and area of specialization. Annual incomes therefore vary from one interpreter to another and may vary from one year to another.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Translators, Terminologists and Interpreters occupational group ranged from **$17,100 to $33,700 a year.** After three years, salaries ranged from **$35,800 to $41,900**. The average salary was **$35,600 a year.**

Interpretive Naturalist

Produced NOVEMBER 2003

Interpretive naturalists explain the natural and scientific features of parks, botanical gardens and wilderness areas to visitors.

NOC Number(s): 2121.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Duties and responsibilities vary from one position to another but, in general, interpretive naturalists:

- research the area's natural history or environment
- conduct nature walks and field outings or provide campground talks
- respond to questions from the public
- prepare brochures and write newspaper articles and labels or signs
- develop, present and evaluate educational programming for the general public or particular audiences (e.g. children, horticultural groups)
- assist with general facility operations.

To make information interesting and meaningful for visitors, interpretive naturalists may participate in developing and presenting interpretive theatre (dramatic) programs. They may also develop and maintain photographic and information files concerning the local environment by:

- conducting interviews
- collecting and taking photographs to provide illustrations for presentations and publications.

Working Conditions

In many parks, interpretive naturalists specialize in particular types of visitor programming. Depending on their specialty, they may spend long hours outdoors. At many sites, especially during the summer months, interpreters work days, evenings and weekends.

Personal Characteristics

Interpretive natualists need the following characteristics:

- an enthusiastic interest in nature
- the ability to communicate with visitors in a pleasant, confident and engaging manner
- the ability to relate well to all kinds of people and work as part of a team
- creativity for developing presentations
- writing skills for developing education and marketing materials
- flexibility.

They should enjoy synthesizing information to develop innovative programs and exhibits, using instruments and equipment to perform tasks requiring precision and being responsible for projects.

Educational Requirements

(section revised OCTOBER 2005)

Most interpretive naturalists have **related post-secondary education**. This is a multi-disciplinary field that draws from a wide range of academic disciplines, including:

- the natural sciences (e.g. biology, botany, environmental science, forestry, zoology)

- education
- recreation and leisure studies
- drama, communication arts or and other liberal arts (e.g. anthropology, archeology, history, native studies).

Post-secondary institutions located throughout Alberta offer a variety of programs that may provide a suitable background for interpretive naturalists. Admission requirements for bachelor's degree programs vary depending on the program and the institution but generally include a high school diploma or equivalent with an average of at least 60 per cent (70 per cent for some programs) in English 30 and four other Grade 12 subjects specified by the institution (e.g. 30-level sciences, Social Studies 30, Pure Math 30 or a 30-level language other than English).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

When choosing a program, prospective interpretive naturalists should discuss their career plans with people currently working in the type of environment in which they would eventually like to work (e.g. parks or wildlife interpretive centres).

Alberta Tourism Education Council (ATEC) offers a nationally-recognized certification program for heritage interpreters that requires completion of 900 hours of on-the-job experience, a workbook and written exam, and independent industry evaluation.

Associations such as **Interpretation Canada**, **Museums Alberta** and the **Canadian Museums Association** also offer professional development opportunities.

Employment and Advancement

(section revised JANUARY 2006)

Interpretive naturalists may be employed full-time, part-time or on a contract basis by:

- national or provincial park services
- urban or rural nature centres
- science or ecology interpretive centres
- wildlife or bird sanctuaries
- zoos
- botanical gardens
- private eco-tour operators.

Many positions are seasonal. These temporary positions are excellent entry-level opportunities for gaining experience. Competition for permanent positions is keen so related work experience (as an employee or volunteer) is essential.

Experienced interpretive naturalists may move into:

- supervisory or management positions such as program co-ordinator or district interpretation/education supervisor
- administrative positions
- related fields such as commercial or tour company guiding, public relations, marketing or education.

In some organizations, advancement to supervisory and management positions requires a graduate degree as well as several years of related experience.

Interpretive naturalists are part of the much larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since interpretive naturalists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for interpretive naturalists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Wages for seasonal and entry-level interpretive positions may range from **$10 to $15 per hour (2003 estimate)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists occupational group working part-time or full-time earned from **$29,400 to $103,200 a year.** The average salary was **$64,800 a year.**

Investment Advisor

Produced NOVEMBER 2005

Investment advisors assist clients by providing investment advice and recommending the purchase or sale of securities. Taking into account a client's income, assets, age, tax burden and financial expectations, investment advisors help the client identify financial goals and recommend investments to assist in achieving those goals.

NOC Number(s): 1113.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I S M

Duties

Investment advisors deal with a variety of investments such as:

- stocks
- bonds
- mutual funds
- government treasury bills and bonds
- options
- pooled funds
- insurance products.

They may work with individual investors or large institutional accounts but, in general, investment advisors:

- discuss investment objectives with clients and make recommendations accordingly (e.g. low risk securities only, or a balance of high and moderate risk securities with long term growth potential)
- maintain strict confidentiality regarding client information
- buy and sell investment products
- advise clients on investment decisions such as what and when to buy and sell
- recommend securities and help clients develop a portfolio
- seek out new clients by identifying and calling on potential clients.

Investment advisors are expected to build their own client base with minimal assistance from their firm. Early in their careers, advisors spend most of their time identifying and calling on prospective clients. Once they have a base of satisfied clients, new business is also generated through referrals.

Working Conditions

Advisors usually work in an office setting. They work long days and may be out of the office often. This is a fiercely competitive business with constant pressure to trade securities.

Personal Characteristics

Successful investment advisors are:

- self-motivated
- aggressive and able to work in a competitive environment
- quick decision-makers
- able to deal with rejection
- quick learners
- good listeners
- energetic and willing to work hard
- able to handle a stressful working environment.

In addition, they need the following characteristics:

- an aptitude for numbers
- strong interpersonal skills
- excellent sales skills
- experience with computers
- the coping skills required to deal with many rapid changes.

Investment advisors should enjoy taking a methodical approach to collecting information, analyzing situations and finding innovative solutions, consulting with people and directing the work of others.

Educational Requirements

Brokerage firms generally require applicants to have:

- related post-secondary education, preferably a university degree.
- successfully completed the **Canadian Securities Institute (CSI)** Canadian Securities Course.

If they do not already have them, investment advisors may take other CSI courses after they are hired:

- Conduct and Practices Handbook
- Professional Financial Planning
- Investment Management Techniques.

In Alberta, the following post-secondary institutions offer finance-related degree programs:

- **Athabasca University**, which has an open admissions policy, offers four year Bachelor of Commerce and Masters in Business Administration (MBA)programs via distance education.
- **Concordia University College of Alberta** in Edmonton offers a four year Bachelor of Management degree program.
- **Grande Prairie Regional College** offers a four year Bachelor of Commerce degree program in collaboration with Athabasca University. Grande Prairie Regional College provides the classroom study and the degree is granted through Athabasca University.
- **The King's University College** in Edmonton offers a four year Bachelor of Commerce degree program.
- **Lakeland College** in Vermilion offer a Bachelor of Applied Financial Services degree program. The entrance requirement is successful completion of a two year diploma in Business Administration.
- **Mount Royal College** in Calgary offers a Bachelor of Applied Financial Services degree program. The entrance requirement is successful completion of a two year diploma in Business Administration.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a Bachelor of Applied Business Administration - Finance degree program. The entrance requirement is successful completion of a two year diploma in Business Administration with specified courses and a minimum GPA of 65 per cent, 2.3, 6 or C+.
- The **University of Alberta** in Edmonton offers four year and five year (co-op) Bachelor of Commerce degree programs and MBA programs with a specialization in finance. The entrance requirement for the bachelor's degree program is a pre-professional year with specific courses.
- The **University of Calgary** Haskayne School of Business offers four year and five year (co-op) Bachelor of Commerce and MBA programs with specializations in finance.
- The **University of Lethbridge** offers a four year Bachelor of Management degree program and post-diploma programs with a specialization in finance.

One and two year university transfer programs are offered by post-secondary institutions throughout the province.

First year admission requirements for university and university transfer programs vary from one institution to another but generally include a high school diploma (or equivalent) with a competitive average of at least 60 per cent (over 70 per cent for some programs) in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30) and three other approved Grade 12 subjects.

Two year financial planning or services diploma programs are offered by:

- **Lakeland College** in Vermilion
- **Medicine Hat College**
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Red Deer College**.

Business administration and management programs are offered by:

- **Alliance University College** in Calgary
- **Athabasca University**

- **Canadian University College** in College Heights
- **Grande Prairie Regional College**
- **Keyano College** in Fort McMurray
- **The King's University College** in Edmonton
- **Lakeland College** in Vermilion and Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College** in Medicine Hat and Brooks
- **Mount Royal College** in Calgary
- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton and at various locations
- **Northern Lakes College** in Grouard and other locations
- **Portage College** in Lac La Biche
- **Red Deer College**
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary.

Minimum admission requirements for financial planning and business administration programs vary but generally include a high school diploma with a specified minimum average or minimum marks in particular courses (e.g. Grade 12 English).

Continuing education programs are often offered on an as needed basis.

For current information on specific programs and their admission requirements, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Investment advisors work in the securities industry for investment and stock brokerage firms. Some of the larger investment firms hire summer students which provides excellent experience. Firms also recruit students on campus in the Spring. New employees generally start in entry-level Discount Broker positions.

Advancement in the investment field depends almost entirely on the initiative and ability of the individual. Some investment advisors become senior managers in their firms or move into senior financial positions in government or business.

Investment advisors are part of the larger National Occupational Classification 1113: Securities Agents, Investment Dealers and Brokers. In Alberta, most people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,450 Albertans are employed in the Securities Agents, Investment Dealers and Brokers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since investment advisors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for investment advisors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Investment advisors may receive commissions on transactions or charge a flat fee based on the value of assets under management. Many advisors earn both kinds of income.

New employees may be paid a salary during the first year. Usually, all of their income is from commissions by the end of their third year.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Securities Agents, Investment Dealers and Traders occupational group earned from **$35,300 to $46,700 a year.** The average salary for this group was **$51,100 a year.**

Investment Underwriter

Produced JANUARY 2003

Investment underwriters help governments and corporations raise capital by providing financial advice and underwriting or distributing new securities.

NOC Number(s): 1114.4
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

When governments need to raise new capital, they may borrow funds by issuing bonds. The money owed to bond holders is then repaid from taxes and other revenues collected over a number of years. Corporations requiring funds can obtain financing by issuing bonds, debentures or shares. Investment firms that offer underwriting services may buy securities at a fixed price in anticipation of being able to sell them to others, or act as agents.

The underwriting department, sometimes called the corporate finance department or the investment banking department, generates revenue by:

- obtaining funds on terms that are suitable for the client and competitive with other issues
- ensuring that any new security is attractive to investors and well-timed so the firm will be able to distribute the entire offering.

To achieve these goals, investment underwriters must be able to help their clients with financial planning for the future by:

- recommending what they consider to be the best solution to a financing problem in a given circumstance
- advising clients on which markets (Canadian, U.S., European) would be the most advantageous for raising the necessary funds.

Corporate underwriters:

- investigate the issuing company's financial status, future outlook, earning capacity and management
- analyze the value of assets that would secure the new issue
- review the condition of securities markets and other factors
- may assist the issuer in completing a prospectus (a description of the business of the company and the securities being sold) which must be filed with provincial securities commissions before a new issue can be brought to the market
- decide whether to place the issue using only the firm's own sales force or to bring in additional companies (which reduces the risk to one company and distributes the issue to a broader clientele)
- advise clients regarding matters such as debt load, balancing investment portfolios, mergers, acquisitions, asset sales and corporate reorganization.

Public finance underwriters assist federal, provincial and municipal governments to:

- determine their future financial requirements
- create bond or debenture issues that will offset the financial requirements identified.

Working Conditions

Underwriting is a highly specialized occupation that involves working long hours in an office environment, and working under the pressure of constant deadlines. Depending on the firm, a considerable amount of travelling may be required. Underwriting staff work apart from the rest of the firm, usually in head offices.

Personal Characteristics

Investment underwriters need the following characteristics:

- energetic and able to learn quickly
- good analytical abilities
- excellent communication and interpersonal skills
- perseverance
- leadership skills
- a degree of aggressiveness.

They should enjoy taking a methodical approach to gathering information, analyzing information and finding innovative solutions to problems, negotiating and directing the work of others.

Educational Requirements

Securities firms hire investment underwriters who have related work experience and at least one of the following qualifications: a Master of Business Administration (MBA) degree, a Law (LLB) degree, a Chartered Financial Analyst (CFA) designation, a professional accountant designation or the Canadian Investment Manager (CIM) designation. For more information, see:

- the Management Consultant occupational profile regarding MBA degree programs
- the Lawyer occupational profile regarding Law degree programs
- the Financial Analyst occupational profile regarding the CFA designation
- the Accountant occupational profile regarding professional accountant designations.

The CIM designation is offered by the **Canadian Securities Institute.** Candidates must successfully complete three courses, including the Canadian Securities Course. Courses are designed to meet the educational requirements for **Investment Dealers Association of Canada** licensing as an associate or full portfolio manager.

Most firms require their investment underwriters to have completed the Canadian Securities Course (for more information, see the Investment Advisor occupational profile).

Employment and Advancement

(section revised JANUARY 2006)

Many investment firms prefer to train their own underwriting staff rather than hire someone trained elsewhere. Competition for underwriting positions is often keen. On-the-job training may include working for about a year under the supervision of senior underwriting staff, preparing analyses and attending meetings with clients. An apprenticeship period as a junior underwriter follows.

Competition is also keen for opportunities to advance to senior management positions.

Investment underwriters are part of the larger National Occupational Classification 1114: Other Financial Officers which also includes financial planners, financial examiners and inspectors, financial investigators, trust officers and mortgage brokers. In Alberta, over 75 per cent of people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Employment growth is best in the corporate sector.

Over 7,850 Albertans are employed in the Other Financial Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since investment underwriters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for investment underwriters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Investment underwriters' incomes are highly variable. Most underwriters are paid base salaries plus bonuses. Base salaries may start at about **$60,000 per year**. Senior investment underwriters may earn well **over $100,000 per year** plus a bonus when the firm has a good year **(2002 estimates)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Other Financial Officers occupational group earned **up to $145,400 a year.** The average salary was **$74,600 a year.**

Ironworker

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Ironworkers fabricate, construct and join scaffolding, structural steel buildings, bridges, ornamental ironwork and pre-cast structures.

NOC Number(s): 7264
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M I**

Duties

Ironworkers erect structural steel components, reinforce steel, post tension tendons, and install conveyors and robotic equipment. Sometimes they perform reconstructive work on existing structures.

Duties vary from one position to another but, in general, ironworkers:

- read blueprints and specifications to lay out the work
- unload and stack steel units so each piece can be hoisted as needed
- erect and install scaffolding, construction cranes, derricks and other hoisting equipment
- assemble rigging (cables, pulleys, hooks) to move heavy equipment and materials
- attach cables from a crane or derrick and direct crane operators with hand signals or radios
- position steel units, align holes and insert temporary bolts
- check the alignments and join steel parts by bolting or welding them with an electric arc process
- assemble and erect pre-fabricated metal structures
- select, cut, bend, position and secure steel bars or wire mesh in concrete forms to reinforce the concrete
- install ornamental and other structural metalwork such as curtain walls, metal stairways, railings and power doors
- unload and install pre-cast components.

Working Conditions

Ironworkers generally work outdoors in teams or crews in remote locations as well as urban areas. Adverse weather conditions such as rain, snow or high winds can shut down projects for days at a time.

The work is physically strenuous and often dangerous when they are required to work at great heights. To reduce occupational hazards such as falling or falling objects, ironworkers must rely on safety equipment and procedures, and on one another to use good judgement.

Ironworkers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Ironworkers need the following characteristics:

- the ability to interpret blueprints
- an understanding of safe work practices
- the ability to work in high places
- physical strength, coordination, agility and balance
- the ability to travel to various work sites
- the ability to work cooperatively with others
- the ability to act quickly and decisively in emergencies.

They should enjoy doing precision work.

Educational Requirements

To work in Alberta, ironworkers must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education with Math 10, Math 13, Applied Math 10 or Pure Math 10 and English 10 or 13 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** for:

- **ironworkers** is three years (four 9-month periods) that include a minimum of 1,125 hours of on-the-job training and six weeks of technical training each period.
- **ironworker-metal building systems erectors** is two periods. The first period spans a minimum of 24 months and includes a minimum of 3,000 hours of on-the-job training and six weeks of technical training. The second period comprises of six weeks of technical training with no minimum months required.

Applicants who have related training or work experience may be eligible for credit or certification.

Only **ironworker** apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Most ironworkers are employed by construction contractors. Some work in industries such as metal fabricating, oil and gas production, iron and steel production, electric utilities and rail transport. Very few are self-employed.

In the construction industry, ironworkers work on a project-to-project basis and frequently travel long distances from job to job. Union members work out of union hiring halls where work is allocated on a rotating basis.

Experienced ironworkers may advance to supervisory positions such as foreman or construction superintendent. Alberta certified journeyman ironworkers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as ironworkers work in the following industries:

- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,550 Albertans are employed in the Ironworkers occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **ironworkers** earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $28 an hour plus benefits** (2005 estimate).

Apprentice **ironworker - metal building systems erectors** earn at least 60 percent of the journeyman wage rate in their place of employment in both the first and second period. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$14 to $28 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Ironworkers occupational group working part-time or full-time earned from **$22,600 to $79,100 a year.** The average salary was **$50,200 a year.**

© Government of Alberta, Human Resources and Employment

Jeweller

Produced APRIL 2003

Jewellers design, make, repair and appraise fine, fashion and costume jewellery.

NOC Number(s): 7344.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O I M**

Duties

Jewellers' duties and responsibilities vary from one job to another but, in general, they:

- design, create or repair jewellery made of precious and semi-precious metals
- set precious and synthetic stones in jewellery mountings.

Jewellers may specialize in certain types of jewellery (e.g. silver or gold) or in particular operations (e.g. design or repair).

- **Jewellery designers** create one of a kind pieces of jewellery. They may use computers to help customers choose from basic styles and mix and match cuts, shanks, sizes and stones to create unique pieces.
- **Model makers** create designs and moulds for mass produced pieces. They may use computer-aided design and manufacturing programs to design products and automate mould and model making.
- **Jewellers in manufacturing** usually specialize in operations such as setting stones, engraving, electroplating, soldering or polishing.
- **Jewellers in retail outlets** sell jewellery items, enlarge and reduce ring sizes, set stones and replace claws, and replace broken clasps and mountings.

Jewellers may also be gemmologists or watch repairers (for more information, see the Gemmologist and Watch Repairer occupational profiles). Some jewellers are qualified to appraise the value of jewellery, gemstones and diamonds.

Working Conditions

Jewellers work indoors, usually seated at specially designed and equipped work benches. Their hours are regular but may involve shift work in manufacturing firms, or evening and weekend work in the retail trade. Overtime may be required during busy periods such as Christmas and the summer holiday season.

Personal Characteristics

Jewellers need the following characteristics:

- good eyesight or corrected vision
- good eye-hand co-ordination and finger dexterity
- the ability to concentrate for long periods of time on minute work.

In addition, designers and model makers must be artistic and able to visualize line, form and colour in three dimensions. Jewellers working in retail stores must have good customer service skills.

Jewellers should enjoy using tools and instruments to perform tasks requiring precision, analyzing information to perform appraisals, and having clear rules and organized methods for their work.

Educational Requirements

In Alberta, many jewellers are trained through **a combination of short courses and experience on the job**. Comprehensive on-the-job training is difficult to obtain because most shops specialize in a particular type of work.

Most employers prefer to hire graduates of recognized training programs who already have some basic skills in the trade. Job applicants are expected to have their own set of hand tools.

Prospective jewellers are encouraged to discuss their career plans with potential employers before enrolling in a training program. Different training routes are more appropriate for different specializations. For example, jewellery designers need training in the visual arts. Admission to most post-secondary art programs requires a high school diploma and a portfolio demonstrating artistic ability.

In Alberta, the **Alberta College of Art and Design** in Calgary offers a four year Visual Arts diploma or degree program with a specialization in jewellery and metals. The program may be taken full-time or part-time. Students apply for admission to the jewellery and metals program after completing a foundation (first) year or equivalent post-secondary fine arts education. The entrance requirement for the foundation year is a high school diploma or equivalent with 60 per cent in English 30 or 65 per cent in English 33 and an overall average of 60 per cent in four Grade 12 subjects. An art portfolio is also required.

The provincial government in **British Columbia** administers a formal four year apprenticeship program for jewellers and goldsmiths.

Elsewhere in Canada, related courses and programs are offered by a variety of colleges and private vocational schools, including the following:

- **George Brown College of Applied Arts and Technology** in Toronto
- **Georgian College** in Barrie
- **Granton Institute of Technology** in Toronto
- the **New Brunswick College of Craft and Design** in Fredericton
- the **Nova Scotia College of Art and Design** in Halifax
- **Nunavut Arctic College**
- the **Ontario College of Art and Design** in Toronto
- **Vancouver Community College**.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Jewellers are employed by jewellery stores, de ign studios, repair shops, wholesale companies and manufacturers. Graduates of art and design programs often work for other artists or work in other occupations while they establish their own independent jewellery design studios.

Advancement generally takes the form of increasing specialization or building a business. Opportunities to advance to supervisory positions are limited.

Jewellers who wish to start their own retail businesses must make a large financial investment in a highly competitive industry. Setting up a design studio involves lower overhead costs.

Jewellers are part of the larger National Occupational Classification 7344: Jewellers, Watch Repairers and Related Occupations. In Alberta, most people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 300 Albertans are employed in the Jewellers, Watch Repairers and Related Occupations group which is expected to expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since jewellers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for jewellers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised MAY 2004)

Salary ranges for jewellers **vary tremendously** depending on the type of work, the jeweller's training and experience, and whether or not commission sales are involved. Jewellery store employees may be able to purchase store merchandise at reduced prices.

Judge

Produced JULY 2003

Judges adjudicate civil and family law cases (cases of non-criminal actions) and criminal cases (cases involving Criminal Code offenses and other federal and provincial statutory offenses) and administer justice according to the law.

NOC Number(s): 4111
Minimum Education: 7 years post-secondary education/training
Employment Outlook: Employment turnover (occupational growth information is not available)
Interests: **D M I**

Duties

Judges weigh evidence and determine the obligations and rights of each party in a case. Depending on the court in which they preside, they may adjudicate criminal, civil or family cases, or all three. In criminal cases without a jury, judges make findings of guilt or innocence as well as determine sentences. In constitutional and civil cases, they make rulings, assess liability and determine the appropriate remedy.

In general, judges:

- interpret and apply legislation (including the Constitution and the Charter of Rights and Freedom) and rules of procedure
- hear and determine interim and preliminary matters as well as appeals from lower courts and administrative tribunals
- assess claims or charges and weigh evidence put forward by the plaintiff (the complaining party in a lawsuit) or Crown (authority of the monarchy) in cases that are tried without a jury
- decide on legal guilt or innocence in criminal cases without a jury and the degree of liability (responsibility) of the defendant in civil cases without a jury, based on the evidence presented
- determine the appropriate remedy or damages (payment required) in civil cases without a jury
- instruct juries regarding applicable laws and weighing of evidence so they can decide on legal guilt or innocence in criminal cases and the degree of liability of the defendant and the appropriate remedy or damages in civil cases
- research and write legal judgements
- pass sentence on persons convicted in criminal cases
- participate in intra- and inter-court and interdisciplinary committees.

For information about the Provincial Court, Court of Queen's Bench and Court of Appeal in Alberta, see the Alberta Courts website.

Working Conditions

Judges preside over court proceedings for about five hours a day. Additional tasks require that they often work overtime evenings and weekends.

Courts are convened in locations throughout Alberta. Circuit judges often travel thousands of kilometres in a month.

Personal Characteristics

Judges need the following characteristics:

- the intellectual ability required to complete the necessary post-secondary education and adjudicate the law
- good listening skills
- empathy
- honesty and personal integrity
- the ability to maintain an objective attitude

- dedication to the Rule of Law and the pursuit of justice.

They should enjoy co-ordinating and interpreting information, and implementing established rules and procedures.

Educational Requirements

Provincial Court Judges are appointed to their office by the provincial government. Qualified lawyers are eligible to apply for a position when a vacancy occurs. The Provincial Court Act does not specify qualifications other than Canadian citizenship but, in general, only practising lawyers who have ten or more years of legal experience are appointed. Their appointments remain in effect until they reach the age of 70, although they may be reappointed annually up to the age of 76. For more information, see the Lawyer occupational profile.

Queen's Bench and **Court of Appeal Justices** are appointed under the federal Judges Act. They are practising lawyers who have at least ten years of experience. Their appointments remain in effect until they reach 75 years of age.

The education of a judge is a continuous and ongoing process. Throughout their terms of appointment, each judge attends and participates in a number of special courses and seminars, designed to help them keep abreast of new developments and changes in the law.

Employment and Advancement

Once a judge has been appointed to the Bench, there is relatively little opportunity for movement within the field. There are a limited number of administrative positions such as Chief Judge or Chief Justice.

Salary

Judges at the Provincial Court level earn from **$170,000 to $185,000 per year** (Chief Judge). Judges, other than the Chief Justices, at the Queen's Bench and Court of Appeal levels earn **$216,600 per year (2003 figures).**

Judicial Clerk

Produced OCTOBER 2005

Judicial clerks provide paralegal support in provincial and federal courts in Alberta.

NOC Number(s): 4211.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S I**

Duties

Judicial clerks perform many office functions as well as court duties. In general, their administrative duties include:

- reviewing and filing pleadings, petitions and other documents relevant to court actions
- contacting witnesses, lawyers and litigants (parties of a law suit) to obtain information for the court
- searching files to answer inquiries and to obtain information for the court
- answering inquiries from the general public regarding judicial procedures, court appearances, trial dates, adjournments, outstanding warrants, summonses, subpoenas, witness fees and payment of fines
- entering court results in computer systems
- assessing court fees according to an established schedule and keeping financial records.

Judicial clerks are usually assigned to a particular court such as Court of Queen's Bench or Provincial Court or to a particular courtroom. Some judicial clerks travel with the circuit court to a variety of locations throughout Alberta where court is held. Depending on the type of court, the number of cases scheduled may range from one to several hundred in one day.

Judicial clerks have a variety of responsibilities before, during and after court proceedings. Specific responsibilities vary depending on the type of court but, in general, judicial clerks are responsible for the following activities prior to court:

- prepare and review files
- ensure that all the proper documents have been submitted
- retrieve from storage all applicable exhibits (evidence)
- prepare the courtroom with paper, pens, water, easels (if necessary) and electronic equipment
- ensure that recording equipment is working.

Judicial clerks are present at all court proceedings where they:

- open court and call the court to order
- read the charges and related information to the court and, if necessary, record the defendant's plea
- amend indictments when necessary and endorse indictments with pertinent information
- swear in jury members, interpreters, witnesses and accused
- record final dispositions
- conduct roll calls and poll jurors
- swear in witnesses and interpreters
- ensure the security of exhibits (e.g. money, drugs, negotiable bonds, weapons)
- accurately record proceedings by using recording equipment.

After court is adjourned for the day, judicial clerks:

- prepare documents that record the outcome of proceedings
- secure exhibits and the courtroom
- prepare and issue orders of the court, including probation orders, release documentation, sentencing information and summonses
- enter proceeding results.

Depending on the size of the community, judicial clerks may perform all of the above duties or work in co-operation with other judicial clerks. In rural communities, judicial clerks may be responsible for providing support for the circuit court. While on circuit, they are responsible for all areas and required to exercise independent judgment, calling the base court for direction if required.

Working Conditions

Judicial clerks work in court and office settings. They work with judges, lawyers, witnesses, jurors, litigants, social workers and the general public. Because their duties bring them into contact with those accused of crimes, they must follow personal safety and security procedures. When present in court, judicial clerks are constantly exposed to the negative aspects of society and must be able to maintain a professional distance.

Overtime is not unusual in this occupation. It is not always easy to predict when court will adjourn and judicial clerks perform after court responsibilities prior to leaving for the day. They often work under intense pressure to complete documentation and meet deadlines. Travel is required for those who have circuit court responsibilities.

Personal Characteristics

Judicial clerks need the following characteristics:

- good organizational and time management skills
- excellent communication skills in person and in writing
- good decision-making skills and the ability to work independently
- the ability to deal with stress.

They should enjoy taking a methodical approach to compiling information, dealing with people and researching legal records.

Educational Requirements

The requirements for employment as a judicial clerk are a high school diploma (or equivalent) plus a minimum of six months of relevant work experience. Graduation from a related post-secondary education program may be recognized as a substitute for the required work experience. A working knowldge of computers and good typing skills skills are essential.

Within their first year of employment, judicial clerks receive in-house paralegal or Court of Queen's Bench paralegal training to further develop their skills.

In Alberta, the following institutions offer related post-secondary programs:

- **Bow Valley College** in Calgary offers a two year Legal Assistant diploma program. The entrance requirement is high school diploma with English Langauge Arts 30-2 and Grade 10 math, or equivalent. Bow Valley College also offers a part-time Legal Administrative Assistant program that includes nine courses (21 hours each).
- The **CDI College of Business, Technology and Healthcare,** a private vocational school located in Calgary and Edmonton, offers a 54 week Professional Legal Assistant program. The entrance requirement is a high school diploma with English 30 or 33, or equivalent.
- **Grant MacEwan College** in Edmonton offers a two year Legal Assistant diploma program that is also available part-time (evenings). The entrance requirement is a high school diploma or equivalent. Applicants must successfully complete an English appraisal (or have at least 65 per cent in English Language Arts 30-1 or English 30, or 75 per cent in ELA 30-2 or English 33) and a keyboard entrance test (30 words per minute with no more than six errors).
- **HCC Choice College**, a private vocational school in Spruce Grove, offers a 25 week Legal Secretary program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Red Deer College** offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent. The College also offers a Legal Focus Certificate program for students currently employed in a legal environment.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent. A typing speed of at least 30 words per minute is recommended.
- **Trend College**, a private vocational school in Edmonton, offers a 46 week Legal Administrative Assistant program. The entrance requirement is a high school diploma with Grade 12 English and Grade 11 math, or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Prior to enrolling in a formal training program, prospective students should investigate the suitability of the program and current employment prospects for graduates.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, judicial clerks are employed by the provincial or federal government. Advancement is based on completion of departmental paralegal training, performance and experience. A minimum of six years of work and supervisory experience is generally required to reach the highest classification level for judicial clerks.

Judicial clerks are part of the larger National Occupational Classification 4211: Paralegal and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 5,550 Albertans are employed in the Paralegal and Related Occupations group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since judicial clerks form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for judicial clerks.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Paralegal and Related Occupations group working part-time or full-time earned from **$17,400 to $113,600 a year.** The average salary was **$37,000 a year.**

Kinesiologist

Produced MARCH 2005

Kinesiologists study the factors that influence human movement and look for ways to improve the efficiency and performance of the human body at work, in sport and in daily life.

NOC Number(s): 4167.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S D I**

Duties

Kinesiologists study all aspects (psychological, physiological, biomechanical, historical and sociological) of human movement in home, work, sport and recreational environments.

Duties and responsibilities vary considerably from one position to another in this multi-disciplinary field. For example, kinesiologists may:

- design athletic equipment
- manage sport facilities
- provide assistance in sport management and promotion
- provide leadership in community wellness programs
- teach in schools
- conduct fitness and mobility programs to reduce accidents among the elderly
- conduct workplace assessments to reduce losses due to injury and to increase worker productivity
- assess client fitness levels and assist in developing appropriate physical activity programs
- assess cardiac patients and recommend appropriate levels of exercise
- develop rehabilitation programs for people who have movement disorders
- work with athletes to improve their fitness and performance levels
- coach or train amateur or professional athletes.

Kinesiologists working in research may:

- monitor patients while they go through an exercise program to test the efficiency of their heart and lung systems
- use electromyography, biofeedback machines, slow-motion film and videotapes to conduct assessments and testing
- study the mechanisms of fatigue during movement
- study the biomechanics and motor control of human movement
- study factors that affect commitment to fitness and rehabilitation programs.

Kinesiologists often work closely with other health and sport professionals.

Working Conditions

Kinesiologists work in a wide variety of environments outdoors and indoors (in offices, laboratories, recreation facilities, hospitals, schools and residential facilities). The work can be physically demanding and involve lifting up to 25 kilograms. For example, kinesiologists may do exercises with patients or have to move or lift patients who cannot exercise alone.

Research activities may involve long hours of studying computer analyses, collecting data and monitoring exercise programs.

Personal Characteristics

Kinesiologists need the following characteristics:

- self-confidence combined with leadership and critical thinking skills
- oral and written communication skills
- patience and flexibility in their relationships with others
- an interest in keeping up-to-date with new technology
- teamwork skills
- an interest in scientific research.

They should enjoy working with people, using equipment and solving problems.

Educational Requirements

Kinesiologists usually have an interdisciplinary background (physiology, anatomy, biomechanics, biomedical engineering, psychology, statistics). The minimum education requirement is a **related four year bachelor's degree**. Many people currently working in the field have a master's degree in physical education.

In Alberta, the following post-secondary institutions offer programs in kinesiology:

- The **University of Alberta** in Edmonton offers a four year degree program in kinesiology. The entrance requirement is an average of 65 to 80 per cent in English 30, Chemistry 30, Math 30 or Pure Math 30, Physics 30, and Biology 30 or Physical Education 30 (five credit). The University of Alberta also offers a four year Bachelor of Physical Education degree program and a related Master of Science (M.Sc.) degree program.
- The **University of Calgary** offers a four year degree program in kinesiology with specializations in biomechanics, athletic therapy, exercise and health physiology, mind sciences in kinesiology, and pedagogy. The entrance requirement is a high school diploma with an average of at least 70 per cent in English 30, Pure Math 30 or Math 31, Chemistry 30, Biology 30 and one of the following: Social Studies 30, Physics 30, Science 30, a 30 level language other than English or a five credit Grade 12 subject (Physics 30 recommended if recommended for biomechanics). The University of Calgary also offers a master's degree program in kinesiology.
- The **University of Lethbridge** offers four year and five year co-operative education bachelor degree programs in exercise science and kinesiology. The entrance requirement is an average of at least 65 per cent in English 30 and three other appropriate 30 level subjects, plus a fifth Grade 12 subject. Chemistry 30 is required for the kinesiology program. Biology 30 and Pure Math 30 (or equivalent) may be required or recommended. The University of Lethbridge also offers a master's degree program in kinesiology.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Kinesiologists are employed by:

- government facilities for special needs populations
- athletic equipment companies
- elementary and secondary schools
- rehabilitation and occupational health departments
- sport and fitness centres
- professional and amateur sport organizations
- hospitals and other health service agencies
- post-secondary education institutions
- sport governing bodies.

Some self-employed kinesiologists work on a contract basis for several employers.

Kinesiologists are part of the much larger National Occupational Classification 4167: Recreation, Sports and Fitness Program Supervisors and Consultants. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Health Care and Social Assistance**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,300 Albertans are employed in the Recreation, Sports and Fitness Program Supervisors and Consultants occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since kinesiologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for kinesiologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Recreation, Sports and Fitness Program Supervisors and Consultants occupational group working part-time or full-time earned from **$13,700 to $51,500 a year.** The average salary was **$37,100 a year.**

Kitchen Helper and Food Assembler

Produced MARCH 2003

Kitchen helpers and food preparers and assemblers assist cooks in restaurants and institutions by keeping the kitchens clean and by performing a variety of food preparation tasks.

NOC Number(s): 6641.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M s**

Duties

Kitchen helpers keep the kitchens in food service establishments clean and tidy. In general, they perform the following duties:

- sweep and scrub floors
- remove garbage
- clean kitchen equipment
- scrape food from plates and wash food trays
- stack dishes in dishwashers
- clean flatware
- wash pots and pans
- store clean items.

In some establishments, kitchen helpers also:

- receive and store supplies
- stock cupboards, refrigerators and salad bars
- clean food preparation and storage areas
- assist in basic food preparation.

Food preparers prepare or cook partially prepared foods in restaurants. In general, they:

- prepare ingredients (e.g. wash and slice vegetables)
- partially cook food in advance of orders
- assemble and measure ingredients to fill orders
- package take-out foods
- pass incomplete orders to other workers to finish
- help line cooks prepare food orders.

Food preparers may also:

- bake some items and finish desserts
- clean food preparation and storage areas
- stock refrigerators and salad bars
- let their supervisors know when supplies are getting low or equipment is not working properly.

Sandwich, salad and dessert makers prepare salads, sandwiches and desserts in commercial eating establishments and institutions such as hospitals. In general, they:

- use manual or electric appliances to clean, peel, slice and trim foodstuffs to prepare sandwich fillings and salads, simple jellied salads and desserts such as ice cream and fruit dishes
- portion and wrap the food, or place it directly on plates for service to patrons
- keep records of the quantities of food used
- help other kitchen staff whenever necessary.

Food assemblers often work on assembly lines putting food trays together in hospitals, cafeterias, airline kitchens and similar establishments. In general, they:

- portion food in consistent serving sizes in an appropriate, safe and attractive manner
- use tongs, forks and scoops to remove portions from containers (which may be heated or cooled) and place the food on plates
- add cutlery, napkins, etc. to complete each food tray
- place food trays over food warmers for immediate service, or store them in refrigerated storage cabinets
- deliver food trays and snacks to nursing units or directly to patients
- distribute menus and collect diet sheets.

Working Conditions

Kitchen helpers and food assemblers work shifts and often have to work weekends and holidays. They are on their feet most of their shift and may have to carry trays of food dishes and glassware weighing up to 25 kilograms. They may be exposed to:

- cool temperatures in refrigeration and freezer units
- heat from dishwashing and cooking equipment
- cleaning agents
- noise and slippery flooring (especially near dishwashers).

Kitchen helpers and food assemblers sometimes work under time pressures and must be careful to avoid cuts from sharp utensils and burns from hot appliances.

Personal Characteristics

Kitchen helpers and food assemblers need the following characteristics:

- good health
- high standards of personal hygiene
- a neat and tidy appearance
- an interest in food preparation
- the ability to follow oral and written instructions
- the ability to work effectively as part of a team.

They should enjoy handling food and equipment, having clear rules and methods for their work, and working with people.

Educational Requirements

(section revised OCTOBER 2005)

There are **no minimum education requirements** for kitchen helpers and food assemblers. However, food safety training is a definite asset when looking for employment and related education is generally required for advancement.

In Alberta, food preparation is taught in some high school Career and Technology Studies courses and there is a formal apprenticeship program for cooks (for more information, see the Cook occupational profile). In addition, the following post-secondary programs are designed to help people enter and progress in the field of food preparation:

- **Bow Valley College** in Calary offers a one year Food Service Worker, Level I program. The entrance requirement is a Grade 10 reading level and employment in a food service area or access to a commercial or institutional kitchen or dietary department.
- **Lethbridge Community College** offers a one year Professional Cooking program. The entrance requirement is 65 high school credits (Grade 11) with at least 60 per cent in English 23 and Math 23 or equivalent. Applicants are required to complete a personal medical profile and update immunization prior to entering the program.
- The **Northern Alberta Institute of Technology** in Edmonton offers a one year certificate program in Culinary Arts. The minimum entrance requirement is Grade 10 or equivalent including English and math. However, an average of 65 per cent in Grade 12 English and math may be required to gain admission to this quota program.
- **Portage College** in Lac La Biche offers a 16 week Pre-Employment Cooking certificate program that includes a two-week work placements and prepares students for apprenticeship. Applicants must have at least Grade 9 education or equivalent. Portage College also offers a 33 week Cooking certificate program. The entrance requirement is Grade 10 or equivalent including English and math.

Alberta Tourism Education Council (ATEC) has developed occupational standards for kitchen helpers. ATEC standards define the knowledge and skills necessary to be competent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Kitchen helpers and food assemblers work in all types of restaurants from fast food outlets and base camps to formal dining rooms, as well as public institutions such as hospitals and nursing homes. Part-time work is common.

Experienced kitchen helpers and food assemblers may advance to assistant cook and cook positions, or to supervisory positions. However, supervisory positions may be limited in number, and advancement is generally easier and faster for those who have a high school diploma and are willing to take further education.

Kitchen helpers and food assemblers are part of the larger National Occupational Classification 6641: Food Counter Attendants, Kitchen Helpers and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 30,700 Albertans are employed in the Food Counter Attendants, Kitchen Helpers and Related Occupations group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 300 to 620 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since kitchen helpers and food assemblers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for kitchen helpers and food assemblers.)

There is a fairly high employment turnover rate in this occupation so jobs are available relatively frequently.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Food Counter Attendants, Kitchen Helpers and Related Occupations group working part-time or full-time earned from **$9,000 to $39,800 a year.** The average salary was **$13,300 a year.**

Salaries are generally highest in hospitals and nursing homes but advancement prospects are limited (for more information, see the Food Service Supervisor occupational profile).

© Government of Alberta, Human Resources and Employment

Land Agent

Produced APRIL 2005

Land agents negotiate and acquire interests in land for rights of way for well sites, pipelines, powerlines, roads and other surface uses.

NOC Number(s): 1225
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

Licensed land agents negotiate and acquire interest in land. They also may:

- assess environmental controls written into agreements (e.g. to protect wildlife or dispose of hazardous waste)
- acquire freehold mineral leases
- assess and settle damages
- negotiate road use agreements
- act as a link between corporations, government agencies, the agriculture industry and land owners
- investigate the condition of soil and crops
- co-ordinate reclamation activities
- prepare reports and documentation
- testify before regulatory boards.

Working Conditions

Land agents generally work in a field environment and may spend a considerable amount of time travelling in rural areas, in all kinds of weather conditions. Working hours can be erratic depending on the availability of landowners.

Personal Characteristics

Land agents need the following characteristics:

- integrity and high ethical standards
- excellent interpersonal and written communication skills
- negotiation and public relations skills
- good organizational skills
- the ability to work with little supervision.

They should enjoy co-ordinating office and field services, and dealing with people from all walks of life.

Educational Requirements

Employers prefer to hire applicants for entry level land agent positions who:

- have related post-secondary education
- are computer literate
- are Commissioners for Oaths
- have experience in the agriculture industry and the oil and gas industry
- have an Alberta Class 5 driver's licence
- are bondable (acceptable to an insurance company as a responsible, law-abiding person).

To obtain a permanent land agent licence, you must:

- first obtain an interim land agent licence (applicants must be at least 18 years of age and successfully complete an examination)

- successfully complete a distance learning program
- article (train) under a qualified permanent land agent for 12 consecutive months
- submit an evaluation completed by the supervising land agent indicating that all requirements have been met
- successfully complete an examination.

In Alberta, the following post-secondary institutions offer related education programs:

- **Mount Royal College** in Calgary offers a five course foundation certificate program and a four course advanced certificate program in Petroleum Land Contract and Administration through Continuing Education. Applicants for the foundation certificate program must be 18 years of age or older. The entrance requirement for the advanced certificate program is successful completion of the foundation certificate program.
- **Olds College** offers a two year Land Agent diploma program and an eight month Land Administration Certificate program. The entrance requirement for both programs is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (English 30 or 33), Pure or Applied Math 10 (Math 10 or 13) and one of the following: Science 20, Biology 20 or Chemistry 20.
- The **University of Calgary** offers four year and five year (co-op education) Bachelor of Commerce (B.Comm.) degree programs in petroleum land management. The entrance requirement is a high school diploma or equivalent with at least 70 per cent in English 30, Pure Math 30 and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five credit Grade 12 subject.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised JULY 2005)

Under Alberta's Land Agents Licensing Act, you must be a licensed land agent to act as a Land Agent or call yourself a Land Agent.

Employment and Advancement

(section revised JANUARY 2006)

Land agents work for oil and gas companies, land service companies, engineering firms, pipeline companies, electric and gas utilities, railways, communications companies and government agencies. They may work in a variety of positions:

- surface land agent
- petroleum landman
- land representative
- municipal land agent
- land use technician
- lease negotiator
- right-of-way planner
- liaison co-ordinator
- land management technician
- contract land agent.

Some land agents are self-employed consultants. Work in this occupation may be seasonal.

Advancement opportunities vary depending on the agent's educational qualifications and experience.

Land agents are part of the much larger National Occupational Classification 1225: Purchasing Agents and Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Wholesale Trade**
- **Public Administration**
- **Construction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**
- **Professional and Technical Services**
- **Transportation and Warehousing**
- **Health Care and Social Assistance**
- **Wood Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,950 Albertans are employed in the Purchasing Agents and Officers occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since land agents form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for land agents.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised AUGUST 2005)

Salaries for land agents can vary greatly depending upon the type of work involved, the individual's background and the employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Purchasing Agents and Officers occupational group working part-time or full-time earned from **$19,100 to $129,200 a year.** The average salary was **$51,100 a year.**

Land Surveyor

Produced JULY 2004

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, buildings, structures and other natural or human-made features on, over or under the surface of the earth.

NOC Number(s): 2154
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Land surveyors use electronic surveying equipment and computer systems to survey land, water and air space. They determine or establish boundaries, or anything relative to a boundary, to identify and certify its location.

Land surveyors and their assistants determine or establish boundaries by:

- searching for previous boundaries in existing survey records
- searching land titles
- conducting field work and preparing plans
- determining the accurate location of a variety of features within a project area
- directing the activities of staff and other professionals.

The information land surveyors gather is used to determine the location, limits and boundaries of:

- rights-of-way for utilities
- road and highway alignments
- well-site locations
- mining claims for resource development
- subdivisions of land
- houses and buildings for construction or sale.

Increasingly, land surveyors are becoming involved in Geographic Information Systems (GIS) and Global Positioning Systems (GPS) work as well.

Working Conditions

Land surveyors work indoors in office environments and outdoors in urban and rural environments. Some lifting (up to 10 kilograms) is required.

Surveyors who have management responsibilities spend most of their time in office environments.

Personal Characteristics

Land surveyors need the following characteristics:

- a strong aptitude for mathematics and computers
- the ability to visualize objects, distances, sizes and other abstract forms
- the ability to work outdoors with precise electronic surveying instruments
- analytical and organizational skills
- the ability to work effectively in a team environment
- an interest in law, history and business administration
- good communication skills.

They should enjoy:

- taking an innovative approach to problems
- using instruments and equipment in a precise, accurate manner
- making decisions and co-ordinating the work of others.

Educational Requirements

Land surveyors need a good understanding of mathematics, physics, earth sciences, computer programming and cartography. The most common educational qualification is a **four year bachelor's degree in geomatics engineering.**

In Alberta, the **University of Calgary** offers a four year Bachelor of Science (B.Sc.) degree program in geomatics engineering. The minimum admission requirement is a high school diploma with an average of at least 70 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Land Surveyors Act, you must be registered with the Alberta Land Surveyors' Association (ALSA) to practice as or use the title Alberta Land Surveyor. If you are not registered with ALSA, you may work in this field only under the supervision, direction and control of an Alberta Land Surveyor.

Employment and Advancement

(section revised JANUARY 2006)

Most land surveyors are employed by surveying and geomatics firms. Some registered Alberta Land Surveyors establish their own surveying companies or become shareholders in existing ones.

Registered Alberta Land Surveyors are part of the larger National Occupational Classification 2154: Land Surveyors. In Alberta, most people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Land Surveyors occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since registered Alberta Land Surveyors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for registered Alberta Land Surveyors. There are about 300 registered Alberta Land Surveyors in the province.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Land Surveyors occupational group working part-time or full-time earned from **$18,100 to $139,300 a year.** The average salary was **$54,500 a year.**

Land Titles Examiner

Produced MAY 2003

Land titles examiners examine land-related documents as they are presented to the land titles office for registration.

NOC Number(s): 4211.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S I**

Duties

In general, land titles examiners:

- determine whether or not land-related documents can be registered under the provisions of the Land Titles Act and other legislation
- determine whether transfers, mortgages, caveats, liens, transmissions, leases, writs, easements and other documents conform to the appropriate legislation and make sure that all other requ red documents are either on record or accompany the document to be registered
- accept documents for registration and assess the appropriate fees, or prepare a rejection notice explaining why the documents are not acceptable
- ensure that all the appropriate data is entered to create new title records or update existing ones.

Some duties are repetitive but all of the above duties carry responsibility.

Working Conditions

Land titles examiners use computers and the Alberta Land Titles Automation System. They work 36 and one quarter hours a week, Monday through Friday, in busy office surroundings.

Personal Characteristics

Land titles examiners need the following characteristics:

- the analytical skills required to pick out the pertinent facts and reach accurate conclusions
- the ability to work independently, referring only unusual cases to supervisors for a decision
- a strong sense of responsibility and thorough attention to detail because items of record missed in an examination may mean a heavy loss to a client or the Land Titles Assurance Fund
- the ability to communicate effectively when contacting law offices regarding corrections and procedures.

They should enjoy work that is secure, follows a predictable routine and requires a high degree of accuracy.

Educational Requirements

The qualification required to become a land titles examiner is a **high school diploma supplemented by experience** examining documents for adherence to legislated requirements or related land experience. Education or training in paralegal studies is a definite asset (see the Paralegal occupational profile for information about related training programs).

Employment and Advancement

Land titles examiners are hired through an internship program that includes a comprehensive training and development period. Interns are expected to gain an understanding of the effects of legal documents, exercise sound judgement and display a high level of accuracy and decision-making ability. Examiners are stationed in regional land titles offices located in Edmonton and Calgary.

This occupation has three levels of responsibility. In Level 1, the entry level, successful interns are given further training on the job and are subsequently enrolled in an in-house intermediate paralegal training program that consists of about 20 hours of classroom instruction spread over several weeks.

Land titles examiners remain at Level 1 for a minimum of two years. At that point, provided they have successfully completed the training program and their job performance is satisfactory, they may be promoted to Level 2, the full working level. At Level 2, they are eligible to enroll in an advanced paralegal training program in which they study cases related to land titles.

After a minimum of three years in Level 2 and completion of the advanced training program, land titles examiners may progress to Level 3, the advanced working level. Advancement opportunities beyond this level are limited.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Paralegal and Related Occupations group working part-time or full-time earned from **$17,400 to $113,600 a year**. The average salary was **$37,000 a year**. Public sector salaries do not range as high as those in the private sector.

© Government of Alberta, Human Resources and Employment

Landscape Architect

Produced MARCH 2005

Landscape architects combine artistic and creative perspectives with scientific and engineering knowledge to create, manage and conserve environments that are both functional and attractive. Their goal is to create harmony between natural environments, land features and architectural structures.

NOC Number(s): 2152
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I S D**

Duties

Landscape architects may plan and design:

- urban, regional and provincial parks
- industrial sites and business parks
- conservation areas
- resorts, playgrounds, marinas, golf courses or other recreation areas
- residential communities
- urban redevelopments
- private gardens and estates
- cemeteries
- grounds for hospitals, schools, airports and other public areas
- private health and institutional sites
- plazas and commercial areas
- rooftop landscapes
- interior landscaping for open spaces in plazas, shopping malls and large buildings
- storm water management facilities
- streetscapes and scenic parkways.

They may be involved in:

- programming for park and public projects and tourist developments
- developing sites related to residential, recreational, institutional, commercial or industrial projects
- conducting public consultations
- managing specific regional areas where they may plan forests, parks and recreational areas
- monitoring the development of natural agricultural lands
- overseeing the restoration, reclamation or conservation of gravel pits, mining areas, land fills and environmentally sensitive areas
- preparing environmental assessments
- assessing aesthetic and quality of life parameters
- providing landscape inventory, and analysis processes and programs.

Landscape architects incorporate elements found in the natural environment (water, rocks, trees, flowers, plants, etc.) and the building industry into their designs. Their work not only contributes to the beauty of the environment but attempts to preserve the natural ecology of an area and reduce the environmental impact of urban, industrial, recreational and other development.

Landscape architects often work as part of a team with:

- architects
- urban planners
- consulting engineers
- building contractors

- scientists (particularly when conservation or reclamation is involved).

In general, they:

- co-ordinate the work of project teams
- meet frequently with clients and the public at large to determine needs, preferences, development feasibility and financial resources available for projects
- study sites, thoroughly observing and mapping out the grade and direction of land slopes, structure and stability of the soil, drainage patterns, and presence of existing structures, vegetation and landforms
- develop site plans which address the various social, economic, physical and artistic areas of concern
- prepare physical form drawings and plans for consideration
- prepare reports and cost estimates, and present them to clients for review and approval
- develop final detailed plans and materials lists
- prepare contract documents and review tenders
- inspect construction of the design.

Landscape architects are usually involved in a number of different projects at once, each at a different stage of development and requiring a different level of involvement.

Working Conditions

Much of the time, landscape architects work in comfortable office surroundings. They also spend a considerable amount of time walking/hiking on work sites, assessing or inspecting construction. Travel, working long hours and dealing with the stress of meeting deadlines are also part of the job.

Personal Characteristics

People interested in working in landscape architecture should have:

- imagination and creativity
- a keen interest in art, design, landscapes and the intrinsic qualities of built and natural environments
- some ability in the visual arts
- an interest in construction
- an interest in and a sensitivity to people's needs, particularly in urban environments
- the ability to work independently and with people.

They should enjoy synthesizing information and finding innovative solutions to problems, working with people at tasks requiring precision, and supervising the work of others.

Educational Requirements

The minimum educational qualification required to work as a landscape architect is **a bachelor's degree in landscape architecture** from a university with a recognized program of studies. Landscape architects interested in operating their own businesses also need business skills.

In Canada, only the **University of Guelph** offers training at the bachelor's level. The entrance requirement is a high school diploma with English 30 and Pure Math 30, or equivalent. Competition for admission is keen.

The following universities offer master's degree programs in landscape architecture:

- **University of British Columbia**
- **University of Guelph**
- **University of Manitoba**
- **University of Toronto**.

Admission to a master's degree program requires a bachelor's degree with an average sufficient for entry into graduate studies.

For current information about programs and admission requirements, please check post-secondary calendars or websites.

Other Requirements

In Alberta, landscape architects must practice for at least three years and pass an exam before they are eligible for professional membership in the Alberta Association of Landscape Architects (AALA).

Employment and Advancement

(section revised JANUARY 2006)

Many newly-qualified landscape architects begin working for established landscape architectural consulting firms under the supervision of a registered landscape architect. Landscape architects also are employed by:

- planning, engineering and architectural firms
- large real estate developers or building contractors
- federal, provincial and municipal government departments concerned with urban planning, parks and recreation, transportation, tourism, environment and public works.

After a number of years' experience and registration with the AALA, many landscape architects open their own businesses or advance to management positions.

In Alberta, over 75 per cent of people employed as landscape architects work in the following industries:

- **Professional and Technical Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 200 Albertans are employed in the Landscape Architects occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Landscape Architects occupational group working part-time or full-time earned from **$33,100 to $104,000 a year.** The average salary was **$62,100 a year.**

Landscape Architectural Technologist

Produced MARCH 2005

Landscape architectural technologists assist landscape architects, architects, and other professional designers and planners in designing and developing outside and inside environments. Projects may range from assisting in planning public parks to developing inner courtyard spaces in shopping malls.

NOC Number(s): 2225.4
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M D**

Duties

Landscape architectural technologists are usually involved in the technical aspects of residential, industrial, commercial and recreational designs. In general, they:

- draft plans
- prepare graphic presentation drawings and perspectives
- prepare computer-assisted technical drawings
- construct models
- draft construction-drawing packages that include grading, planting, irrigation, layout and preparation details
- estimate project costs
- inspect construction
- write contracts
- assemble specifications
- help select plant materials, furnishings and surfacing materials
- consult with clients
- provide graphics for marketing brochures and portfolios.

Initially, designs and plans are prepared by landscape architects and must be sketched and drafted for presentation to and approval by the client. Sometimes scale models are constructed to give the client a better picture of the proposed project.

Working Conditions

Most landscape architectural technologists work indoors in an office environment and outdoors on construction sites. They usually work standard office hours but overtime may be required to meet project deadlines.

Personal Characteristics

Landscape architectural technologists need the following characteristics:

- good communication skills (including listening and writing skills)
- creativity
- the ability to do precise work
- an interest in the development of natural and created environments
- the ability to think three-dimensionally and visualize spatial relationships
- sensitivity to the needs of people and their relationship with their environment
- the ability to work effectively in a team environment.

They should enjoy working with instruments and equipment at tasks requiring precision, analyzing information and taking a methodical approach to their work, and assisting landscape architects.

Educational Requirements

Landscape architectural technologists need broad technical knowledge combined with an understanding of the aesthetic and functional aspects of natural and ornamental landscapes.

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers the only two year Architectural Technology diploma program in Alberta that has a specialization in landscape architecture. The entrance requirement is a high school diploma with English 30 or 33, Pure Math 30 (or at least 60 per cent in Applied Math 30) and one of the following: Physics 30 (recommended), Chemistry 30, Biology 30 or Science 30.

Normal colour vision is required. This is a quota program so higher marks may be required to gain admission. Part of the program is available through Continuing Education. For current information about the program and mature student admission, please check the NAIT calendar or website.

Other Requirements

Certification is voluntary. NAIT program graduates may join the Alberta Association of Landscape Architects as Landscape Architectural Technology (LAT) members.

Employment and Advancement

(section revised JANUARY 2006)

Landscape architectural technologists work for:

- architectural and landscape architectural firms
- parks and recreation offices
- landscaping contractors and supply companies
- greenhouses and nurseries
- golf course design companies.

With additional education, experienced landscape architectural technologists may obtain certification in specific areas such a irrigation design or contract administration. Some experienced technologists establish their own businesses.

Landscape architectural technologists are part of the larger National Occupational Classification 2225: Landscape and Horticultural Technicians and Specialists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Professional and Technical Services**
- **Agriculture**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,050 Albertans are employed in the Landscape and Horticultural Technicians and Specialists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since landscape architectural technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for landscape architectural technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Landscape and Horticultural Technicians and Specialists occupational group working part-time or full-time earned from **$14,600 to $83,100 a year.** The average salary was **$39,900 a year.**

Landscape Gardener

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Landscape gardeners work with other trades to carry out landscaping operations and design in a variety of environments. These environments include residential, commercial and public grounds, playgrounds, golf courses, garden centres, tree nurseries, greenhouses and interior landscapes.

NOC Number(s): 2225.5
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M D**

Duties

Landscape gardeners work with machinery and equipment ranging from simple hand tools such as pruning shears and sprayers to heavy duty trucks, tractors, loaders and graders. They may be responsible for the routine maintenance of equipment.

Since landscape gardeners also work with pesticides and fertilizers, they must be aware of government regulations restricting their use and the toxic or hazardous effects the chemicals may have.

They may supervise or be involved in any combination of the following activities:

- consult with clients on all aspects of landscaping
- create landscape designs
- provide advice to customers on plant selection and care
- prepare the ground for planting
- amend poor soil conditions
- identify, plant and transplant greenhouse and nursery stock
- identify, plant, transplant and maintain flowers and ground covers
- install rock gardens, ponds, decks, drainage systems, retaining walls, fences, planters or playground equipment
- seed and sod lawns
- care for established lawns
- trim and prune hedges, trees and shrubs
- identify plant diseases and insect problems
- apply fertilizers and pesticides
- install, operate and maintain irrigation systems
- work in all aspects of greenhouse and nursery production.

Landscape gardeners work with machinery and equipment ranging from simple hand tools such as pruning shears and sprayers to heavy duty trucks, tractors, loaders and graders. They may be responsible for the routine maintenance of equipment.

Since landscape gardeners also work with pesticides and fertilizers, they must be aware of government regulations restricting their use and the toxic or hazardous effects the chemicals may have.

Working Conditions

Most of the work is performed outdoors, although some indoor work may be involved in the greenhouse production and sale of nursery stock, landscape materials, supplies and interior plantscape maintenance. The work can be strenuous and may involve considerable lifting, carrying and bending. Other activities may include design, consulting and day-to-day business operations.

Landscape gardeners may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Landscape gardeners need the following characteristics:

- physical strength and stamina
- the ability to work in all kinds of weather
- good customer service skills.

They should enjoy working with plants and expressing their creativity.

Educational Requirements

Many landscape gardeners begin as general garden workers.

To work in Alberta, landscape gardeners must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees..

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,200 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at Olds College.

Landscape gardeners who will be working with pesticides must obtain a Landscape Alberta Pesticide Applicator Certificate from the Pesticides Program - Land Branch of Alberta Environment.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For information about other related programs, see the Landscape Architectural Technologist, Landscape Architect, Arborist, Agrologist, Greenhouse Operator, Nursery Operator and Turfgrass Management Specialist occupational profiles.

Employment and Advancement

Landscape gardeners may be employed by landscape architects, contractors, nurseries and tree farms, greenhouses, cemeteries, governments, garden centres and landscape supply outlets.

Beginning landscape gardeners often enter the occupation during the busy summer months as labourers or apprentices.

Experienced landscape gardeners may advance to supervisor, manager or head landscape gardener positions, or own and operate a business. Alberta certified journeyman landscape gardeners who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Landscape gardeners are part of the larger National Occupational Classification 2225: Landscape and Horticultural Technicians and Specialists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Professional and Technical Services**
- **Agriculture**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)

- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,050 Albertans are employed in the Landscape and Horticultural Technicians and Specialists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since landscape gardeners form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for landscape gardeners.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice landscape gardeners earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$16 to $27 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Landscape Gardeners occupational group ranged from **$14,200 to $32,400 a year.** The average salary was **$38,800 a year.**

Lather-Interior Systems Mechanic

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Lather-interior systems mechanics assemble and install the frameworks for gypsum materials in buildings.

NOC Number(s): 7284.3
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O I**

Duties

Duties vary from one position to the another but, in general, lather-interior systems mechanics (lathers):

- read blueprints and examine the existing structure to decide how to proceed with the project
- erect metal or wood frameworks for walls, partitions, ceiling systems and ornamental shapes
- apply gypsum lath, metal lath and stucco wire to install items such as metal door and window frames, access doors, wall insulation and demountable partitions (used in most commercial office spaces)
- cut openings in lath for heating and ventilation piping, ducts and electrical outlets
- install corner beads and wire mesh around beams to which plaster is to be applied
- may install acoustical tile, hangers for suspended ceilings or metal studs for composition wallboard or lath.

Working Conditions

Lathers usually work indoors, sometimes on ladders or scaffolds. Most are employed in urban areas where there is enough work to keep them employed full-time. In rural areas, the work normally done by lathers may be done by carpenters. Lathers work year round, 40 hours a week except when overtime is required to meet construction deadlines. There is some risk of injury due to falling or other construction site hazards.

Lathers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Lathers need the following characteristics:

- good hand-eye coordination
- the ability to pay careful attention to detail
- the ability to work well independently or with others.

They should enjoy doing precision work that sometimes requires creativity.

Educational Requirements

To work in Alberta, lathers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training in the first year, a minimum of 1,620 hours of on-the-job training and six weeks of technical training in the second and a minimum of 1,560 hours of on-the-job training and eight weeks of technical training in the third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Lather apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton and by mobile delivery in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Lathers are usually employed by contractors in the construction industry. Some are self-employed and contract their services for smaller jobs.

Experienced lathers may specialize in working with a particular type of lath, become estimators or advance to supervisory positions. Alberta certified journeyman lathers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Lathers are part of the larger National Occupational Classification 7284: Plasterers, Drywall Installers and Finishers and Lathers. In Alberta, most people employed in this classification work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,450 Albertans are employed in the Plasterers, Drywall Installers and Finishers and Lathers occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since lathers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for lathers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice lathers earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second and 80 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$21 to $25 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Lathers occupational group working part-time or full-time earned from **$26,500 to $72,700 a year.** The average salary was **$59,500 a year.**

Lawyer

Produced NOVEMBER 2005

Lawyers study and interpret points of law to advise clients of their rights and legal obligations, and represent client interests in legal transactions and proceedings.

NOC Number(s): 4112
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Lawyer advise clients on legal matters, represent clients before administration boards and draw up legal documents such as contracts and wills. They also plead cases, represent clients before tribunals and conduct prosecutions in courts of law.

Legal practice may be roughly divided into two types: court work and office work. In Canada, when lawyers have completed their training, they are called Barristers and Solicitors because they are eligible to do both. Most lawyers, particularly in small practices, do some court work.

Barristers (court work practitioners) act as advocates for their clients in both criminal and civil law suits. Criminal law involves breaches of the Criminal Code of Canada (e.g. arson, theft, murder) or violations of other statutes (e.g. the Controlled Drug and Substances Act, Young Offenders Act). Civil cases involve non-criminal actions and are often settled out of court. For example, civil cases include:

- personal injury law suits
- family and divorce actions
- contract law suits
- employment and labour disputes
- estates
- intellectual property disputes.

In general, barristers acting on behalf of clients:

- research legislation, legal precedents and case law
- gather evidence (interview witnesses, review documents)
- advise clients, initiate legal actions and draft pleadings
- present a client's case or defence in court or before a tribunal, board, mediator or arbitrator
- negotiate settlements
- may act as a mediator, conciliator or arbitrator.

Litigators are barristers engaged in civil work.

Prosecutors are barristers for the Crown who:

- research legislation, legal precedents and case law
- assemble and analyze evidence gathered by police
- advise police regarding charges and keep crime victims informed about legal procedings
- prosecute criminal cases in court.

Solicitors (office work lawyers) deal with those areas which generally do not require courtroom appearances such as real estate transactions, corporate law, commercial law, administrative law, patents, probate and administration of estates, international law and some aspects of family law.

In general, solicitors:

- act as advisors in legal transactions
- draft legal documents such as wills and business contracts
- handle the transfer of property
- administer estates

- incorporate companies
- negotiate deals
- act as executors, trustees or guardians in estate and family law matters
- act as trade-mark or patent agents.

Lawyers and articling students are **notary publics** under the Notaries Public Act (Alberta). A notary public may:

- administer oaths and take affidavits, affirmations and declarations
- draw, pass, keep and issue deeds, contracts, charter parties and other mercantile transactions in Alberta
- attest (show that something is true and valid) commercial instruments.

Lawyers and articling students also are **commissioners of oaths** under the Commissioner of Oaths Act (Alberta). They may administer oaths and take and receive affidavits, declarations and affirmations in Alberta.

Working Conditions

Legal work can be very demanding and stressful. Lawyers may spend many hours outside the normal working day drafting briefs, researching cases and generally keeping informed about new developments in the legal profession. They usually work as partners or associates in law offices and employ one or more staff members to assist them with their work.

Other working conditions depend on factors such as size and type of law firm. For example:

- **criminal lawyers** may, if required, spend time conferring with clients who are being detained in remand centres or prisons.
- **practitioners in international, corporation or taxation law** work closely with government officials and professionals such as accountants, economists and business executives.
- **family law lawyers** meet with families in the course of adoption or child custody proceedings.
- **labour lawyers** sometimes visit work sites to investigate working conditions or labour disputes.

Personal Characteristics

Lawyers need the following characteristics:

- the physical and emotional stamina required to cope with periods of stress
- a sense of public responsibility and a strong code of ethics
- the ability to communicate persuasively and promote their services
- the ability to think logically and analytically and respond quickly
- organizational skills and the ability to balance career demands and outside interests
- a high tolerance for confrontation and conflict
- tact and patience in dealing with clients
- an excellent memory.

They should enjoy co-ordinating information, negotiating settlements and advising clients.

Educational Requirements

To practice law in Alberta, lawyers must have completed three stages of post-secondary education and training requiring a total of **six to eight years of study**.

The **first stage** is two to four years in an undergraduate (bachelor's) degree program. Undergraduate degree programs and university transfer programs are offered by post-secondary institutions throughout Alberta. In general, the admission requirement for undergraduate programs is a high school diploma with a competitive average (ranging from 60 to 80 per cent depending on the program) in English Language Arts 30-1 (or English 30) and four other approved or specified 30 level courses (e.g. social studies, math or a second language other than English, sciences).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Students seeking admission to law school must write the Law School Admission Test (LSAT), an aptitude test administered four times a year at a number of Canadian campuses.

The **second stage** is a three year Bachelor of Laws (LLB) degree from an accredited law school. Admission to law school is based on the Faculty of Law's assessment of the applicant's academic record, LSAT score and general qualifications. The minimum academic requirement is completion of at least two years of a program leading to a bachelor's degree or equivalent, but admission after two or three years of undergraduate study is very unusual. A bachelor's degree is

generally required to gain admission.

The **University of Alberta** in Edmonton offers

- an LLB degree program. This is a quota program in which a number of places are reserved for mature and indigenous students.
- a combined Master of Business Administration and Bachelor of Laws (MBA/ LLB) degree program. In addition to the entrance requirements described above, admission to these programs requires successful completion of the Graduate Management Admission Test (GMAT).
- a Master of Laws (LLM) program and a postgraduate diploma program. The entrance requirement for both programs is a law degree from a recognized university. The postgraduate program requires at least two years of experience in law practice or a related field. See the University of Alberta calendar for information about additional entrance requirements.

The **University of Calgary** offers:

- an LLB degree program. In addition to the entrance requirements described above, the applicant's maturity, work experience and community involvement are considered.
- combined MBA/LLB and Master of Environmental Design (Environmental Science)/LLB degree programs.
- an LLM program in natural resources and environmental law. The entrance requirement is an LLB degree from a recognized university.

The **University of Saskatchewan** in Saskatoon offers a special law program for aboriginal people. For more information, contact the Legal Studies for Native People program, located at the Native Law Centre, University of Saskatchewan.

The **third stage** of education and training for lawyers is called **articling**. After prospective lawyers graduate from an LLB or combined degree program, they must work for one full year as a student-at-law. This is a form of apprenticeship in which the student enters into an agreement (articles of clerkship) with a practitioner of the Alberta Bar, to provide the graduate with practical training in both barrister's and solicitor's work. Most articling students are paid a modest salary.

It is the responsibility of the law graduate to obtain an articling position. A graduate's ability to secure an articling position depends on a number of factors including the level of economic activity in the province and the graduate's grades and related experience.

Articling students must attend and successfully complete the CPLED program (Canadian Centre for Professional Legal Education) which is offered twice a year and covers many practical aspects of the law. This six month bar admission program includes classroom sessions and online learning.

Other Requirements

Under Alberta's Legal Profession Act, you must be registered member of the Law Society of Alberta (LSA) to practice law in Alberta or call yourself a Lawyer.

Employment and Advancement

(section revised JANUARY 2006)

Lawyers may be self-employed, or employed by businesses or federal, provincial or municipal governments. In the past, most lawyers started their careers in private practice, either as members of firms or on their own. Today, a growing number of graduates are pursuing alternate careers working for government, business, industry, nonprofit groups or post-secondary institutions.

Lawyers in private practice sometimes become senior partners in their firms. A few are appointed to the Bench or to administrative tribunals. Government legal advisors may advance to positions as department heads or diplomats, and corporate lawyers may become company executives. Lawyers also may combine their training in law with other professional training e.g. in arbitration, mediation, medicine, business, library studies or political science.

Lawyers are part of the larger National Occupational Classification 4112: Lawyers and Quebec Notaries. In Alberta, over 75 per cent of people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

Over 10,050 Albertans are employed in the Lawyers and Quebec Notaries occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 270 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Incomes in private practice vary tremendously depending on the firm's ability to attract and maintain clients.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Lawyers and Quebec Notaries occupational group earned from **$38,500 to $180,400 a year.** The average salary was **$87,900 a year**.

Legal and Realtime Reporter

Produced OCTOBER 2005

Legal and realtime reporters write machine shorthand at a minimum speed of 225 words per minute to capture every word spoken in a variety of settings. Computer technology instantly translates shorthand notes into English text that can be displayed or printed.

NOC Number(s): 1244.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Duties and specific tasks vary depending on the reporter's specialization.

Legal (court) reporters produce verbatim transcripts of Court of Queen's Bench proceedings, quasi-judicial proceedings, boards of inquiry, public hearings and pre-trial civil proceedings.

Realtime reporters provide instantaneous translation of shorthand notes into English text displayed on computer monitors or large projector screens. They may subsequently prepare transcripts. Realtime reporters usually work in live settings such as video or cyber conferences, government hearings or debates, live television broadcasts or post-secondary classrooms. There are two types of realtime reporters:

- **CART (Communication Access Realtime Translation) reporters** specialize in providing services in business and education settings for the deaf and hard of hearing. For example, they may provide an instant transcript of a lecture on a notebook computer screen and a paper or disk copy at the end of class.
- **Captioners** specialize in providing closed captioning for live television broadcasts.

Working Conditions

Most legal and realtime reporters work in urban environments where they may work in settings such as boardrooms, conference rooms, courts, classrooms, business or community settings. Many have home offices.

Reporters may be expected to sit for two or three hours at a time and maintain their concentration throughout. Depending on the nature of the proceedings they report, they may be required to work in challenging circumstances.

Personal Characteristics

Legal and realtime reporters need the following characteristics:

- excellent communication skills in English including an extensive vocabulary
- a good knowledge of current events and the world around them
- an interest in law and computers
- the ability to be discreet with respect to the information available to them through their work
- good interpersonal skills and a courteous, tactful manner with people who are not familiar with legal proceedings
- the physical and mental stamina required to work long hours and maintain a high standard of work
- strong powers of concentration and quick reactions
- the flexibility required to adapt to last minute changes
- excellent hearing and good vision (to be able to correctly report and read back their notes)
- an interest in learning about diverse topics and new technology.

They should enjoy:

- working at tasks governed by clear rules and guidelines with minimal direction or supervision from others
- operating machines such as computers and computerized shorthand equipment
- doing work that requires a high degree of accuracy in a limited time.

Educational Requirements

The **Alberta Shorthand Reporters Association (ASRA)** recommends that prospective legal and realtime reporters take their training in a program approved by the National Court Reporters Association (NCRA). Students training to become legal and realtime reporters should study computer compatible machine shorthand theory. Legal, computing or related business experience is an asset.

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Legal and Realtime Reporting diploma program approved by the NCRA. The entrance requirement is a high school diploma or equivalent with Grade 12 English, science and social studies courses. Applicants must have a typing speed of 30 net words per minute.

For current information about the program and NAIT's mature student admission policies, please check the NAIT calendar or website.

Ongoing professional development is required to maintain certification with ASRA and NCRA: 30 Continuing Education Credits and 3 Continuing Education Units every three years. ASRA recognizes NCRA Continuing Education Units and will convert them into ASRA Continuing Education Credits.

Other Requirements

Certified Shorthand Reporter is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Certified Shorthand Reporter, you must be a registered member of the Alberta Shorthand Reporters Association (ASRA). You do **not** have to be registered if you do not call yourself a Certified Shorthand Reporter.

Employment and Advancement

(section revised JANUARY 2006)

Most legal and realtime reporters work for private reporting companies or are self-employed. Some are federal or provincial government employees. Those employed by the provincial government work in the Court of Queen's Bench.

There is a growing demand for CART reporters and broadcast captioners. Demand for broadcast captioners has been boosted by the Canadian Radio-Television and Telecommunications Commission's 100 per cent target for captioning local news and 90 per cent target for all other programming. However, only a relative few reporters achieve the standards required to become captioners.

Legal and realtime reporters are part of the larger National Occupational Classification 1244: Court Recorders and Medical Transcriptionists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Court Recorders and Medical Transcriptionists occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since legal and realtime reporters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for legal and realtime reporters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Income for legal reporters and realtime captioners depends on the work available to them, their skill level and the productivity of the reporter. New graduates generally start at **$30,000 to $38,000 a year**; average salaries range from **$45,000 to $60,000 a year (2005 estimate).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Court Recorders and Medical Transcriptionists occupational group working part-time or full-time earned from **$18,300 to $56,900 a year.** The average salary was **$34,400 a year.**

© Government of Alberta, Human Resources and Employment

Legal Secretary

Produced OCTOBER 2005

Legal secretaries perform a variety of secretarial and administrative duties in law offices, the legal departments of large organizations, courts, real estate companies and land title offices.

NOC Number(s): 1242
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O d**

Duties

Duties and responsibilities vary from one organization to another but, in general, legal secretaries:

- use word processing software to prepare correspondence and legal documents such as deeds, wills, mortgages, contracts, statutory declarations, affidavits, motions and briefs
- answer the telephone, schedule appointments and meetings, greet visitors and handle administrative and business details
- set up and maintain records management systems including classifying and coding electronic and hardcopy files
- transcribe meeting agendas and minutes from voice recordings or handwritten notes
- open correspondence (including faxes and e-mail), co-ordinate the flow of information and respond to routine inquiries
- review and proofread outgoing documents to ensure that they are correct and comply with legal proceedures
- access and use on-line legal resources
- operate sophisticated office equipment such as voice mail messaging systems and computer scanning equipment
- handle routine accounting procedures
- perform general office duties as required
- may attend court or conferences to take notes, minutes and dictation.

Legal secretaries are often called legal assistants. With experience, their duties and responsibilities may overlap with those of paralegals (for more information, see the Paralegal occupational profile).

Working Conditions

Legal secretaries work in fast-paced office environments. They usually work standard office hours but overtime may be required to meet deadlines.

Personal Characteristics

Legal secretaries need the following characteristics:

- excellent oral and written communication skills
- good organizational and time management skills
- personal integrity and the ability to maintain confidentiality
- the ability to work independently or as part of a team.

They should enjoy dealing with people, operating equipment such as computers, and compiling and organizing information.

Educational Requirements

Employers require legal secretaries to be computer literate and have fast, accurate keyboarding skills. Some require a typing speed of 60 words per minute. A post-secondary certificate or diploma in office administration, Internet literacy and familiarity with legal vocabulary are definite assets.

In Alberta, many colleges, technical institutes and private vocational schools offer secretarial and office administration programs. For a listing, see the Administrative Assistant occupational profile. The following institutions offer programs specifically for administrative assistants in legal offices.

- **Bow Valley College** in Calgary offers a two year Legal Assistant diploma program and a part-time Legal Administrative Assistant program that includes nine courses (21 hours each). The entrance requirement for the diploma program is a high school diploma with English 30-2 and Grade 10 math, or equivalent.
- The **CDI College of Business, Technology and Healthcare**, a private vocational school located in Calgary and Edmonton, offers a 54 week Professional Legal Assistant program. The entrance requirement is a high school diploma with English 30 or 33, or equivalent.
- **Grant MacEwan College** in Edmonton offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent. Applicants must take an English appraisal (or have at least 65 per cent in English Language Arts 30-1 or English 30, or 75 per cent in ELA 30-2 or English 33) and a keyboard entrance test (30 words per minute with no more than six errors).
- **HCC Choice College** in Spruce Grove offers a 25 week Legal Secretary program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 (or any Grade 11 math), or equivalent.
- **Red Deer College** offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent. The College also offers a Legal Focus Certificate program for people who are already employed in a legal environment.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent.
- **Trend College**, a private vocational school in Edmonton, offers a 46 week Legal Adminstrative Assistant certificate program. The entrance requirement is a high school diploma with a Grade 12 English and a Grade 11 or 12 math, or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Prospective students should investigate the suitability and reputation of training programs with employers before enrolling in a program. For information about related two year diploma programs, see the Paralegal occupational profile.

The **Legal Education Society of Alberta (LESA)** offers professional development courses for legal support staff.

Employment and Advancement

(section revised JANUARY 2006)

Legal secretaries are employed by:

- legal firms
- the legal departments of large corporations
- real estate companies
- municipal, provincial and federal courts
- related government departments and agencies (e.g. land title offices).

In large organizations, experienced legal secretaries may advance to supervisory positions.

In Alberta, over 75 per cent of people employed as legal secretaries work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,750 Albertans are employed in the Legal Secretaries occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Legal Secretaries occupational group working part-time or full-time earned from **$14,500 to $90,500 a year.** The average salary was **$36,500 a year.**

Letter Carrier

Produced NOVEMBER 2005

Letter carriers are employees of Canada Post who sort and deliver mail for established routes, record delivery of registered mail and collect payments for cash-on-delivery (COD) parcels.

NOC Number(s): 1462
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M o s**

Duties

On a typical day, letter carriers:

- arrive at the post office at an established time between 3 and 8:30 a.m. and pick up the mail for their routes
- sort mail into cases that have pigeon holes for every address on a route
- bundle mail in preparation for delivery
- prepare bags of mail for transport by truck to relay boxes along routes.

This takes about 30 per cent of their working day. For the remainder of their shift, they:

- deliver letters, small packages and printed matter
- collect money for COD parcels
- record delivery of registered mail
- leave cards telling people where to call for undeliverable mail
- keep records of changes of address, redirect mail and complete forms to notify publishers of changes.

Letter carriers also may deliver telegrams or special types of mail.

Working Conditions

Letter carriers routinely lift pouches and sacks of mail weighing up to 22.7 kilograms and carry up to 15.9 kilograms. Route lengths vary from four to ten kilometres (400 to 600 deliveries) depending on the location and average daily volume of mail. Time motion studies called walk evaluations are done periodically to ensure that the work load is roughly the same for each letter carrier. Some letter carriers drive motor vehicles to reach routes that are not accessible by public transportation.

Letter carriers are on their feet all day and work in all types of weather conditions. They are provided with suitable uniforms for each season. Occupational hazards include unfriendly dogs, icy and snowy sidewalk conditions, and poorly maintained steps and sidewalks.

Personal Characteristics

Letter carriers need the following characteristics:

- the physical strength and stamina required to carry a heavy satchel in all types of weather
- a good memory for names and numbers
- good organizational skills
- the finger and manual dexterity required for sorting mail
- a courteous manner and good communication skills for dealing with the public.

They should enjoy having clear guidelines for their work and following a set routine, handling printed matter and dealing with people.

Educational Requirements

For employment with Canada Post, letter carriers must:

- pass practical and oral tests set by Canada Post
- have some related experience
- have a valid driver's license with no more than six demerit points, no more than two minor infractions and no major infractions.

Letter carriers receive one week of classroom training plus training on the job.

Employment and Advancement

(section revised JANUARY 2006)

Letter carriers are employed by Canada Post in larger towns and cities across the country. They usually start as temporary employees who may be called in to work only a few days a month. The waiting period before obtaining a permanent position can be several years.

All letter carriers are members of the Canadian Union of Postal Workers (CUPW).

Most letter carriers remain in this classification but, with experience, advancement to supervisory and management positions is possible.

In Alberta, people employed as letter carriers work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,650 Albertans are employed in the Letter Carriers occupational group which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Benefits for permanent employees include a disability insurance plan, dental plan, vision care and hearing aid plan, group surgical and medical plan, supplementary death benefits plan, superannuation plan, minimum of three weeks vacation each year and paid sick leave.

Hourly wages for letter carriers range from **$20.10 to $20.65 an hour (2005 figures)**.

Librarian

Produced DECEMBER 2005

Librarians assess the informational, educational, cultural and recreational needs of the community they serve, find resources to meet those needs, and provide access to and manage resources.

NOC Number(s): 5111
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S d**

Duties

Librarians lead and manage the delivery of library services. They make information accessible by selecting, purchasing, organizing, maintaining and retrieving a wide variety of materials: books, newspapers, periodicals, government documents, films, microfilm, audio cassettes, videotapes, on-line databases and electronic information resources (for example, CD-ROMs and Internet documents). This involves the development and use of classification and information management systems to organize, house and display materials in such a way that desired resources can be readily located, obtained and used. It also involves teaching others how to use information resources and providing related advice.

Librarians' duties vary depending on the size and type of organization (for example, public library, school, government department, corporate office, information technology firm) but, in general, librarians:

- help people access the materials and information they want
- answer questions by critically assessing information in reference books and resources such as on-line databases and the Internet
- evaluate, select and purchase materials, and negotiate software licensing agreements
- catalogue materials and supervise cataloguing assistants
- develop access/instructional resources such as indexes, bibliographies, web pages, electronic pathfinders and on-line tutorials
- evaluate, select, use and maintain computer systems and software
- plan and deliver client-centered programs and services (for example, services for corporate clients, storytelling for children, newsletters, public lectures, or programs for seniors, young adults or special groups)
- design and deliver information literacy instruction programs
- collaborate in facility planning
- advocate on behalf of libraries and information service, and do public relations work for their organizations (for example, do televised book reviews or community talks)
- develop library policies and procedures
- supervise library staff
- conduct related research.

Librarians also may have management responsibilities such as planning and budgeting. In public libraries, managers work closely with advisory boards and municipal governments. In corporate settings, librarians may be members of the corporation's management team.

Working Conditions

Librarians may work in large libraries providing services to the public or smaller libraries providing specialized resources and reference information for a specific group of people.

Academic and public libraries may require librarians to work evening and weekend shifts.

Personal Characteristics

Librarians need the following characteristics:

- critical reading and thinking skills
- good interpersonal skills and a strong customer service orientation
- an interest in information technology
- good oral and written communication skills
- good organizational and time management skills
- strong decision-making skills
- initiative
- creativity, *imagination and flexibility*
- the ability to work independently or as part of a team.

They should enjoy organizing and locating information, instructing and helping people, and supervising and co-ordinating the work of others.

Educational Requirements

New entrants to the profession must have a master's degree in library science or library and information studies. Some positions also require specialized subject knowledge. For example, employers generally require music librarians to have a bachelor's degree or master's degree in music.

The **University of Alberta** in Edmonton offers a two year **Master of Library and Information Studies (MLIS)** program. The entrance requirement is a four year bachelor's degree or equivalent from a recognized institution and a Grade Point Average (GPA) sufficient for admission to a graduate program.

The University of Alberta also offers a **Teacher-Librarianship Diploma** program by distance learning. Applicants must have an approved degree and a teaching certificate. Classroom teaching experience is strongly recommended.

Employment and Advancement

(section revised JANUARY 2006)

Librarians are employed by:

- public libraries in urban centres and rural communities
- public and private schools, colleges and universities
- regional libraries
- corporate, government, hospital and legal libraries
- publishers and broadcasters
- museums and archives
- not-for-profit organizations
- information brokerage firms
- information technology firms
- bookstores.

A growing number of librarians are self-employed and work as independent consultants or entrepreneurs.

In larger libraries, experienced librarians may advance to management positions such as cataloguing or reference services manager, branch head or library director.

In Alberta, over 75 per cent of people employed as librarians work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,200 Albertans are employed in the Librarians occupational group which is expected to grow grow 0.4 to 1.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Librarians occupational group working part-time or full-time earned from **$11,900 to $66,300 a year.** The average salary was **$47,700 a year.**

Library Clerk

Produced DECEMBER 2005

Library clerks help librarians and library technicians by serving library users and performing many of the clerical tasks involved in library work.

NOC Number(s): 1451
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S o**

Duties

In general, library clerks:

- issue books and audio-visual materials to library users
- check for damage when materials are returned
- deal with library users' questions and concerns and, when appropriate, refer them to other library staff members
- sort materials and replace them on the shelves
- help people find books and publications
- photocopy and mail out material
- maintain records of over-due books and issue notices
- accept fine payments
- reserve requested materials
- sort and stamp mail
- do related word processing, as required.

Other duties depend upon the size and nature of the library. Library clerks also may:

- issue library membership cards
- make minor repairs to damaged books
- answer telephone inquiries
- process new materials including books, audiovisual materials and computer software
- enter bibliographic information into databases
- maintain the periodical section
- assist in delivering programming for children and adults
- keep pamphlet files up to date
- assist in the preparation of displays
- issue photocopier cards.

Many duties are automated. In large libraries, duties are generally divided among a number of library or circulation clerks.

Working Conditions

Public, college and university libraries require library clerks to work some evenings and weekends, usually on a rotating basis. School and business libraries are normally open only during regular school and business hours. Lifting up to 10 kilograms may be required.

Personal Characteristics

Library clerks need the following characteristics:

- patience and a strong customer service orientation
- flexibility and resourcefulness
- the ability to communicate effectively and deal pleasantly with library users

- the ability to work with little supervision
- the ability to work as part of a team
- an appreciation for detail
- the ability to maintain accuracy and persevere at tasks that may be repetitive.

They should enjoy taking a methodical approach to tasks such as reshelving books, helping people find information, and working with equipment such as computers.

Educational Requirements

Most employers prefer to hire people who have:

- at least a high school diploma
- related education or training
- keyboarding and computer skills
- volunteer or part-time work experience in a library
- past work experience in a service capacity, helping the public.

Post-secondary education is a definite asset.

Once hired, library clerks are trained on the job or take related post-secondary courses (for more information, see the Library Technician occupational profile).

Employment and Advancement

(section revised JANUARY 2006)

Library clerks are employed in:

- school and post-secondary institution libraries
- public libraries
- libraries in large business firms
- technical libraries
- medical libraries
- government departmental libraries.

Some positions are part-time. Advancement to library technician positions requires completion of a two year post-secondary diploma program (see the Library Technician occupational profile).

In Alberta, most people employed as library clerks work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,150 Albertans are employed in the Library Clerks occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for library clerks vary greatly depending upon the responsibilities of the position, the nature and location of the library, and the clerk's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Library Clerks occupational group working part-time or full-time earned from **$11,200 to $39,200 a year.** The average salary was **$36,300 a year.**

© Government of Alberta, Human Resources and Employment

Library Technician

Produced DECEMBER 2005

Library technicians support and assist librarians by performing technical tasks involved in library work such as collection management, cataloguing and document delivery. They also provide reference services and may manage small corporate, school or public libraries.

NOC Number(s): 5211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **S M i**

Duties

Library technicians may work in large libraries providing services to the public or in smaller libraries providing specialized resources and reference information to a particular client group. Therefore, their duties and responsibilities may vary considerably from one position to another. However, in general, library technicians:

- acquire materials (print, audio-visual and electronic) and classify, catalogue and maintain them
- process interlibrary loans
- help clients find and use library resources such as reference materials, audio-visual equipment or electronic resources
- search online databases and other electronic information resources such as in-house databases or the Internet to find answers to reference questions
- code and input bibliographic data
- assist in the design and maintenance of in-house databases, web pages and local area networks
- provide library orientation and instruction for library users
- deliver programs designed for children, young adults or other groups
- compile and consult print and electronic indexes
- select news clippings and prepare competitive intelligence information for library users
- supervise other staff, volunteers or student assistants.

Under the supervision of a librarian, library technicians may be responsible for sections or departments in a larger library. In smaller libraries, technicians may assume full responsibility for library operations including ordering materials and managing the library's budget.

Working Conditions

Academic and public libraries often require library technicians to work evening and weekend shifts. Some lifting up to 10 kilograms may be required.

Personal Characteristics

Library technicians need the following characteristics:

- a strong customer service orientation
- initiative
- a flexible attitude
- the ability to follow directions for detailed tasks
- good organizational and time management skills
- excellent communication skills
- an interest in computers and computer technology
- the ability to work independently and as part of a team.

They should enjoy helping people find information, taking a methodical approach to their work, and being creative as well as paying careful attention to details.

Educational Requirements

Library technicians must be knowledgeable about library operations including computer applications. Most library technicians are graduates of related two year diploma programs or have at least two years of post-secondary education. Employers generally prefer to hire applicants who have related work or volunteer experience.

In Alberta, the following post-secondary institutions offer related two year diploma programs:

- **Grant MacEwan College** in Edmonton offers an Information Management and Library Technology diploma program that includes a library field placement. The entrance requirement is a high school diploma or equivalent with at least 65 per cent in English Language Arts 30-1 or English 30 (or 75 per cent in ELA 30-2 or English 33), or mature student status. Good communication skills are essential.
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Library and Information Technology program that includes two library field placements. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English Language Arts 30 or English 30 (or 65 per cent in ELA 30-2 or English 33), 50 per cent in Social Studies 30 or 33, and 60 per cent in one of the following Grade 12 subjects: math, science, social science, accounting, law or a second language. Mature students may substitute LIB200: Introduction to Libraries for the Grade 12 subject. Successful completion of a keyboarding course is recommended. LIB200 and the first year of this program may be taken by distance education.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Library technicians are employed in:

- urban, regional and rural public libraries
- corporate, government, hospital and legal libraries
- public and private schools, colleges and universities
- not-for-profit organizations
- information brokerage firms
- library software production companies
- book, periodical and publishing firms
- records management departments in large organizations
- bookstores.

Experienced library technicians may advance to supervisory positions or assume responsibility for the operations of established libraries. However, other advancement opportunities are limited. Canadian universities do not recognize library technician courses for transfer credit to master's programs in library science.

Library technicians are part of the larger National Occupational Classification 5211: Library and Archive Technicians and Assistants. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,550 Albertans are employed in the Library and Archive Technicians and Assistants occupational group which is expected to grow 0.6 to 1.6 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since library technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for library technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Library and Archive Technicians and Assistants occupational group working part-time or full-time earned from **$18,700 to $45,200 a year.** The average salary was **$32,400 a year.**

Licensed Practical Nurse

Produced SEPTEMBER 2004

Licensed practical nurses provide care for individuals, families and groups in a variety of health care settings. They may practice independently or as part of a health care team.

NOC Number(s): 3233.1
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: M S O

Duties

Licensed practical nurses work in settings ranging from hospitals, continuing care facilities and community care to physicians' offices and schools. Depending on the setting, they may have a variety of nursing care responsibilities in collaboration with registered nurses, psychiatric nurses, physicians, physiotherapists or other health care professionals. How independently licensed practical nurses carry out these responsibilities depends on the nature and complexity of the patient care required and the environment in which they work.

In general, licensed practical nurses:

- provide direct care by assessing client health needs
- participate in the planning of care
- implement nursing interventions
- evaluate the outcomes of nursing interventions
- confer with other health care team members as necessary
- document and communicate client data to ensure continuity of care.

Licensed practical nurses who have advanced specialty training may provide expanded services in operating rooms, orthopedics, hemodialysis or immunization programs.

Working Conditions

Licensed practical nurses may work in very different settings ranging from hospitals to patients' homes. Depending on where they are employed, they may work shifts that include evenings, nights, weekends and holidays. They may be required to help lift immobile patients or lift items weighing up to 25 kilograms.

Personal Characteristics

Licensed practical nurses need the following characteristics:

- a caring attitude
- good communication and interpersonal skills
- the ability to work independently and as part of a health care team
- a commitment to life-long learning
- critical thinking and problem solving abilities.

They should enjoy working with people, and operating medical and computer equipment.

Educational Requirements

(section revised AUGUST 2005)

In Alberta, licensed practical nurses must be graduates of an approved practical nursing education program or have equivalent training. Practical nursing programs consist of a combination of classroom and laboratory instruction and clinical experience in various health care settings. These programs take just over one year to complete.

Licensed practical nursing programs are offered by the following post-secondary institutions. Applicants for these programs must be at least 18 years of age and have a clear criminal records check.

- **Bow Valley College** offers programs in Calgary and various locations under the auspices of Big Country Educational Consortium and Chinook Educational Consortium. The entrance requirement is at least 60 per cent in English 30-1 or 30 (or 70 per cent in English 30-2 or 33), Pure Math 20 or Applied Math 30 (or 70 per cent in Applied Math 20) and Biology 30 (or Bow Valley College's Anatomy and Physiology/Microbiology), or equivalent.
- **Keyano College** in Fort McMurray. Admission requirements are the same as for the NorQuest College program.
- **Lakeland College** in Lloydminster. Admission requirements are the same as for the NorQuest College program.
- **Lethbridge Community College**. Admission requirements are the same as for the Bow Valley College program.
- **Medicine Hat College**. Admission requirements are the same as for the Bow Valley College program.
- **Northern Lakes College** in Grouard offers programs in Slave Lake and various other locations. The entrance requirement is at least 60 per cent in English 30-1 (or 70 per cent in English 30-2 or 33) and Biology 30 plus Pure Math 20 (or Math 20, or 60 per cent in Applied Math 20 or Math 23). Applicants also must have a current Standard First Aid and Basic Rescuer (Level 3 or C) certificate, up-to-date immunization (Hep B immunization may be completed while in the program), a criminal record check and basic computer skills.
- **NorQuest College** offers programs in Edmonton and various locations. The entrance requirement is a high school diploma, or equivalent, with at least 50 per cent in English 30 (or 60 per cent in English 33), Math 10 or 23 (or Pure Math 10 or Applied Math 20) and Biology 30, Chemistry 30 or Physics 30 (Biology 30 preferred).
- **Portage College** in Lac La Biche. Admission requirements are the same as for the NorQuest College program.
- **Red Deer College**. Admission requirements are the same as for the Bow Valley College program.

Continuing education programs are offered throughout the province on an as needed basis and via distance learning.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Health Professions Act and Licensed Practical Nurses Profession Regulation, registration with the College of Licensed Practical Nurses of Alberta (CLPNA) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College may perform restricted activities specified in the Regulation. Only registered members may call themselves Licensed Practical Nurses.

Employment and Advancement

(section revised JANUARY 2006)

Licensed practical nurses are employed by:

- regional health authorities
- continuing care facilities
- community care agencies
- occupational health departments in large organizations
- medical clinics
- schools
- group homes.

With additional training, licensed practical nurses may move into occupational health roles in industry, or work in independent foot care businesses or ophthlamic clinics.

In Alberta, most people employed as licensed practical nurses work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 5,500 Albertans are employed in the Licensed Practical Nurses occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Licensed Practical Nurses occupational group working part-time or full-time earned from **$19,600 to $41,600 a year.** The average salary was **$32,300 a year.**

Licensed Practical Nurse (Advanced Orthopaedic Specialty)

Produced SEPTEMBER 2004

Licensed practical nurses (LPNs) in the advanced orthopaedic specialty apply, adjust and remove a variety of casts, commercial splints/braces, bandages and traction. They work as part of health care teams in emergency departments, cast rooms, orthopaedic surgical wards and medical clinics.

NOC Number(s): 3233.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M S O**

Duties

LPNs (advanced orthopaedic specialty) work under the direction of orthopaedic surgeons and casualty officers. Their duties vary from one position to another but, in general, they:

- apply, adjust, maintain and remove casts, including specialized casts such as body casts
- remove dressings and assess the condition of wounds
- maintain and remove fracture pins
- set up, operate and maintain various types of traction equipment
- fit and apply commercial fracture braces and other braces
- fit, adjust and maintain continuous pass motion (CPM) machines for people who have had knee or shoulder surgery
- apply splints and bandages
- remove staples and sutures
- provide information to clients about their injuries, treatment plans and how to care for casts, braces and splints, reinforcing medical information which already may have been provided by physicians
- assist physicians with other orthopaedic procedures such as injections and fracture/dislocation reductions
- maintain orthopaedic equipment and supplies.

Working Conditio[illegible]

LPNs (advanced orthopaedic specialty) may work shifts including weekends, evenings and nights. Lifting up to 25 kilograms may be required.

Personal Characteristics

LPNs (advanced orthopaedic specialty) need the following characteristics:

- manual dexterity
- strong interpersonal skills
- consideration for clients and families in distress
- organizational ability to handle the high volume of orthopaedic services in many health centres
- the ability to work independently and as a member of a team
- commitment to continuous learning.

They should enjoy having clear rules and organized methods, and operating and adjusting orthopaedic equipment.

Educational Requirements

(section revised JUNE 2005)

In Alberta, LPNs (advanced orthopaedic specialty) must be **licensed practical nurses** who have completed an approved **advanced education in orthopaedics** program. For information about licensed practical nurse programs, see the Licensed Practical Nurse occupational profile.

In Alberta, **NorQuest College** in Edmonton offers a 28-week Advanced Education in Orthopaedics certificate program. Applicants must be registered licensed practical nurses who have a minimum of one year experience in an acute care setting and who have successfully completed the Advanced Anatomy and Physiology and Orthopedic Assessment. Up to date immunization record is also required.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Health Professions Act and Licensed Practical Nurses Profession Regulation, registration with the College of Licensed Practical Nurses of Alberta (CLPNA) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College may perform restricted activities specified in the Regulation. Only registered members may call themselves Licensed Practical Nurses.

Employment and Advancement

(section revised JANUARY 2006)

Most LPNs (advanced orthopaedic specialty) are employed in emergency departments and hospital cast rooms, day and out-patient departments, medical clinics and walk-in health clinics.

In Alberta, most people employed as LPNs (advanced orthopaedic specialty) work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,500 Albertans are employed in the Licensed Practical Nurses occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since those working in orthopaedics form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for them.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Licensed Practical Nurses occupational group working part-time or full-time earned from **$19,600 to $41,600 a year.** The average salary was **$32,300 a year.**

Life Skills Coach

Produced SEPTEMBER 2003

Life skills coaches lead experiential learning groups. They prepare learners to deal effectively with personal issues by guiding them through activities such as self discovery and behaviour identification exercises.

NOC Number(s): 4212
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M i

Duties

Life skills coaches work with groups of young people and adults. Their duties and responsibilities vary from one position to another but, in general, they:

- encourage independence and self-confidence
- motivate group members and facilitate adjustment to change
- teach and model good communication, interpersonal and problem solving skills
- establish, maintain and enforce standards of acceptable behaviour
- help group members define personal behavioural objectives
- modify and deliver lessons that respond to participants' needs
- help group members identify and implement constructive solutions to problems
- evaluate performance and help group participants to evaluate their own performance
- keep notes and records.

Life skills coaches work as part of a social service team and are often involved in case conferences and case management sessions. They may also deliver career development programs (for more information, see the Career Counsellor/Advisor occupational profile) and administer work experience programs.

Working Conditions

Life skills coaches may work in a wide variety of settings. Their hours of work also vary and may include evening and weekend hours.

The work demands emotional maturity and can be stressful. Life skills coaches may have to deal with mental health and legal issues, behavioural problems and incidents of aggression.

Personal Characteristics

Life skills coaches need the following characteristics:

- a genuine interest in helping people develop better ways of dealing with their problems
- excellent oral and written communication skills
- emotional maturity and good judgement
- the ability to listen non-judgementally, with empathy and understanding
- the ability to keep contacts with clients on a professional level
- creative ability for developing new approaches and programs
- decision-making skills.

They should enjoy helping others, compiling information and developing innovative approaches to problem solving.

Educational Requirements

(section revised APRIL 2005)

Academic qualifications vary greatly in this occupation. Most life skills coaches have **post-secondary education** in a related discipline such as psychology or social work. Suitable certificate, diploma and degree programs are offered by post-secondary institutions throughout Alberta. For more information, see occupational profiles such as Addictions Counsellor, Career Counsellor/Advisor, Child and Youth Care Worker, Community Health Representative, Psychiatric Nurse, Psychologist and Social Worker. The ability to communicate in languages other than English, especially First Nations languages, is an asset.

In Alberta, the following post-secondary institutions offer programs that are specifically designed to train life skills coaches:

- **Bow Valley College** in Calgary offers:
  - an eight-month Life Skills Coach certificate program that is based on the Saskatchewan NewStart model of experiential adult education. The program is offered on an evening and weekend schedule. Admission requirements include three to five years of experience in human or community service, Grade 12 or equivalent education plus some post-secondary education, and evidence that applicants use successful life skills in their own lives. Applicants must participate in a selection interview and be willing to participate in self-exploration, coaching theory and development activities. Graduates of this program may be recommended for a 100-hour internship program to qualify for the Certified Life Skills Coach designation.
  - a two year Life Skills and Career Development Coach diploma program. Applicants entering this program must have successfully completed the Life Skills Coach certificate program or an equivalent prerequisite for the diploma program.
- **Columbia College**, a private vocational school in Calgary, offers a full-time (25 weeks) and part-time (50 weeks) Human Services Professional diploma and certificate programs. Applicants must have Grade 12 or equivalent education. To enter the diploma program, students must have successfully completed the Human Resources Certificate program from a recognized institution or its equivalent.
- **Life Skills Training Centre (Canada) Ltd.**, a private vocational school in Edmonton, offers a 12-week Life Skills Coach Training program. Applicants must have Grade 12 or equivalent education and three letters of recommendation. They must also pass an aptitude test and a personal interview.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is not legally required to work as a life skills coach in Alberta but may be required as a condition of employment.

The Alberta Society of Professional Life Skills Coaches has a certification process that is based on the NewStart training model and leads to the designation Certified Life Skills Coach, Accredited. For more information, see the Canadian Alliance of Life Skills Coaches and Associations website.

Employment and Advancement

(section revised JANUARY 2006)

Life skills coaches work for social service agencies. They may be employees or work on a contract basis.

Without further education, advancement opportunities are limited.

Life skills coaches are part of the larger National Occupational Classification 4212: Community and Social Service Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,600 Albertans are employed in the Community and Social Service Workers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since life skills coaches form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for life skills coaches.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Community and Social Service Workers occupational group working part-time or full-time earned from **$14,100 to $104,900 a year**. The average salary was **$27,800 a year**.

Lighting Designer

Produced FEBRUARY 2004

Lighting designers design and plan lighting effects for theatre, dance, opera, television, video and film productions.

NOC Number(s): 5243.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

Lighting designers consult with directors and other designers to define a stylistic approach for each production. They create light plots and sequence lighting cues which must take into consideration the size, shape and technical capabilities of the theatre or performing space, the visibility of performers and the mood of each scene as well as complement set and costume designs.

Duties and responsibilities vary from one type of production to another but, in general, lighting designers:

- read the script and attend some rehearsals to see how the stage or acting area will be used in the production
- consult with the director and other designers to develop design concepts, create lighting plots, schedules and equipment lists
- supervise the hanging and focusing of lighting instruments
- build lighting cues for the production
- attend technical and dress rehearsals to supervise the lighting and make changes as needed.

In some theatres, one designer may be responsible for lighting, set design and costume design. In smaller theatres, the lighting designer may also program and run the lighting board for a production (for more information, see the Lighting Technician occupational profile).

Working Conditions

Lighting designers usually work from home offices and often work long hours to meet deadlines. The use a variety of materials, tools and equipment including technology that is unique to the profession.

Personal Characteristics

Lighting designers need the following characteristics:

- creativity and artistic vision
- flexibility
- good spatial perception
- the communication and interpersonal skills required to work effectively with others and market their ideas or services.

They should enjoy synthesizing information about diverse requirements, experimenting and finding innovative solutions to problems, doing precise work with tools and equipment, and supervising the work of others.

Educational Requirements

(section revised JULY 2005)

Lighting designers need:

- an understanding of design principles and elements, and three-dimensional space
- practical experience in technical theatre
- math and drafting skills

- computer skills (especially computer aided drafting).

Because this field is so specialized, lighting designers need **related post-secondary education**. A bachelor's degree or master's degree in fine art with a specialization in theatre design is recommended.

In Alberta, the following institutions offer programs specifically in theatre design:

- The **University of Alberta** in Edmonton offers a four year Bachelor of Fine Art (BFA) degree program in theatre design. The entrance requirement is one year of university studies (which counts toward the degree), including an English class at the University of Alberta or in a university transfer program offered elsewhere (courses in the Humanities, Social Sciences and Fine Arts are recommended). A portfolio and three letters of reference are required. The University of Alberta also offers a Master of Fine Arts (MFA) degree in theatre design.
- The **University of Lethbridge** offers a four year BFA degree program in drama with a design/technical major. The entrance requirement is an average of at least 60 per cent in English 30, three other appropriate 30 level subjects and a fifth Grade 12 subject.
- During the summer months, the **Banff Centre for the Arts** offers Theatre Production and Design programs for people who already have related training and experience. The Centre also offers Theatre Production Residencies. Applicants must submit a resume and a statement of learning objectives.

The following institutions offer related technical programs or specializations:

- **Grant MacEwan College** in Edmonton offers a two year Theatre Production diploma program. The entrance requirement is a high school diploma or equivalent with English 30 (or at least 75 per cent in English 33).
- **Mount Royal College** in Calgary offers a two year Theatre Arts diploma program with a technical stream. The entrance requirement is a high school diploma, and an audition or interview.
- **Red Deer College** offers a two year post-diploma Bachelor of Applied Motion Picture Arts degree program with a specialization in motion picture production and management. The minimum entrance requirement is a grade point (GPA) average of 2.0/4 in a two year theatre, film or television diploma, or equivalent experience. Red Deer College also offers a two year Theatre Studies diploma program. The entrance requirements are a high school diploma or equivalent with English 30 or 33, an interview and audition.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Lighting designers work for:

- theatre companies
- film and television studios
- opera and dance companies
- festivals.

Some theatre companies and film studios employ resident designers but most lighting designers work as freelance artists who negotiate contracts for specific projects. Therefore, aspiring lighting designers must develop a portfolio of their work. Volunteering to work for community amateur theatre companies or cable television stations provides valuable practice for lighting designers who are trying to gain experience in the field.

Graduates of design programs usually start as designers for smaller theatres or as assistant designers in larger theatres. Advancement generally takes the form of more demanding assignments. Some lighting designers teach at universities and colleges.

Lighting designers are part of the much larger National Occupational Classification 5243: Theatre, Fashion, Exhibit and Other Creative Designers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since lighting designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for lighting designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Most lighting designers are hired on contract for particular productions. Fees vary considerably depending on the production and the designer's reputation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group working part-time or full-time earned from **$13,100 to $106,500 a year.** The average salary was **$28,900 a year.**

Lighting Technician

Produced JULY 2005

Lighting technicians set up, maintain and operate light fixtures, control devices and the associated electrical and rigging equipment used for television, motion picture, and theatre and stage productions.

NOC Number(s): 5226.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M i

Duties

Lighting technicians use conventional lighting fixtures, moving head and moving mirror fixtures, colour filters, patterns, light modifiers and various methods of control and manipulation to create different lighting effects. In general, they:

- work co-operatively with the head electrician, a lighting designer/director, director of photography or gaffer (master electrician) to implement lighting designs
- read and interpret blueprints, and use computer assisted design (CAD) software to create drawings
- set up, focus and operate lighting fixtures, control consoles and auxiliary equipment
- perform simple electrical wiring tasks (usually 120v), trouble shoot circuits and calculate maximum circuit loads
- use manual or computer control consoles to control lighting throughout a production
- co-ordinate lighting rigs with sound techicians and stage carpenters
- perform routine maintenance functions such as replacing lamps and damaged colour filters or patterns, and maintaining lighting equipment in safe working condition.

For remote television broadcasts, lighting technicans survey locations, prepare lighting plans, arrange for the transportation of equipment and organize equipment setup.

In smaller organizations with no lighting director or designer, lighting technicians also may:

- attend production meetings and discuss lighting needs and special effects with directors
- design the lighting and decide where to place lighting equipment to achieve desired effects
- prepare budgets and work within them
- perform other duties such as operating audio equipment.

Working Conditions

Working conditions vary a great deal from one job to another. For example, working on a theatre production in a converted barn is very different from working in a television studio. In general, however, lighting technicians spend a lot of time on their feet and the pace of work can become hectic. Last minute changes are often required. Safety precautions must be observed at all times, particularly when handling hot lamps, climbing ladders, going up lifts, working above others and working on electrical cables and equipment.

Hours of work also vary:

- Lighting technicians employed by large television stations generally work 40 hours a week including evenings and weekends. Technicians covering important events or working on television series may be required to work 10 to 12 hours a day, sometimes from remote locations or in bad weather conditions.
- Those employed in theatres often work daytime hours prior to and during technical rehearsals and evening hours for the run of the show.
- Those employed in motion picture and theatre/stage productions may be required to work highly irregular hours with short deadlines. Some travel may be required to film in remote locations or accompany theatre and concert productions on tour.

Lighting technicians are routinely required to lift and carry equipment. Occasionally, they may be required to lift equipment weighing up to 25 kilograms or more.

Personal Characteristics

Lighting technicians must be able to:

- concentrate on the lighting during a production, respond quickly to technical problems and continue to observe safety precautions at the same time
- work as part of a team and gain the confidence of performing artists
- adapt to a variety of production styles and requirements
- meet deadlines
- keep up with changes in technology
- be able to improvise when the perfect tools are not available
- move heavy equipment safely (which requires a moderate level of physical fitness).

They should enjoy working with tools and electric/electronic equipment on tasks requiring precision, having clear guidelines for their work, and finding innovative ways to do things.

Educational Requirements

Lighting technicians need a basic understanding of electricity, colour theory, lighting equipment, light modifiers, dimmers and control desks, and must be able to apply their knowledge in a variety of situations. Some knowledge of electronics is an asset.

In the past, many lighting technicians learned on the job. However, the field is becoming more and more technical and competition for positions is keen. Most employers prefer to hire people who have related education or experience. Creative talent and training is a definite asset for lighting technicians who want to advance in the field.

In Alberta, the following post-secondary institutions offer programs related to theatre, television and motion picture production:

- **Grant MacEwan College** in Edmonton offers a two year Theatre Production diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or at least 75 per cent in ELA 30-2 or English 33).
- **Mount Royal College** in Calgary offers a two year Theatre Arts diploma in technical theatre. The entrance requirement is a high school diploma or equivalent. An interview may be required.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Radio and Television diploma program. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33 and at least 50 per cent in Grade 11 math, science and social studies. Admission is competitive for this quota program.
- **Red Deer College** offers a two year Theatre Studies diploma program with a specialization in theatre technology and management. The entrance requirements are a high school diploma or equivalent with English 30 or 33, an interview and audition. Red Deer College also offers a two year post-diploma Bachelor of Applied Motion Picture Arts degree program with a specialization in motion picture production and management. The minimum entrance requirement is a grade point (GPA) average of 2.0/4 in a two year diploma in theatre, film or television, or equivalent experience.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Cinema, Television, Stage and Radio Arts diploma program. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English Language Arts 30-1 or 30-2 (or English 30 or 33). Admission is competitive for this quota program.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Fine Arts degree program in Drama (Design, Technical Theatre). The entrance requirement is a minimum average of 60 to 80 per cent in English 30-1 and four of the following: Biology 30, Chemistry 30, Pure Math 30, Math 31, Physics 30, Social 30, 30-level languages other than English, fine arts subject (only one). Contact the faculty or department for specific requirements.
- The **University of Lethbridge** offers post-diploma and degree programs in drama with a technical/design major. The entrance requirement is an average of at least 60 per cent in English 30, three other appropriate 30-level subjects and a fifth Grade 12 subject.

Continuing education programs are often offered on an as needed basis. **The Banff Centre** offers a Theatre Production and Design program and a 14 week Media and Visual Arts program for people who have related experience.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Lighting technicians are employed by:

- television stations, networks and cable companies
- film and motion picture production companies
- theatre and dance companies
- concert promoters
- trade shows
- lighting equipment manufacturers, suppliers and rental companies
- architectural lighting companies
- museums, theme parks and cruise ships
- post-secondary institutions.

In motion picture and theatre lighting, employment may be seasonal or short term and even experienced workers may experience periods of unemployment between jobs.

Experienced lighting technicians in large organizations may advance to supervisory positions such as head electrician, lighting director or gaffer. Further advancement generally requires post-secondary education (which may be acquired through specialized workshops and seminars).

Lighting technicians are part of the larger National Occupational Classification 5226: Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 550 Albertans are employed in the Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since lighting technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for lighting technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Rates of pay for lighting technicians vary depending on the nature of the work, location, and the skills and reputation of the worker.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts occupational group working part-time or full-time earned from **$14,600 to $66,400 a year.** The average salary was **$28,900 a year.**

Linguist

Produced NOVEMBER 2005

Linguists study human language and speech, and carry out scientific research on the structure, development and use of human languages.

NOC Number(s): 4169.5
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

Linguists study language by analyzing:

- word meaning and the meaning of phrases and sentences
- the structure of phrases and sentences
- sound systems and their structure
- properties shared by human languages
- ways in which languages differ
- language development, use and change
- speech errors
- discourse structure
- the form and function of language.

Linguists may apply their knowledge in a wide variety of areas including:

- language disorders and the acquisition of language in children
- the function and role of language in various cultures
- the ways in which languages change over time and the ways in which this helps us understand our human history
- software and database development (natural language interfaces, document retrieval and information extraction from written text, machine translation)
- identifying speakers or writers for forensic purposes
- teaching language instructors and developing related guidelines, technical methodologies and instructional materials
- language and brain function
- development of language material for First Nations people
- language and word processing
- development of software for grammar checking
- dictionary development.

Working Conditions

Linguists often work standard hours in an office environment but some field work may be required for data collection. Teachers and researchers may work long hours (for more information, see the University Professor occupational profile).

Personal Characteristics

Linguists need the following characteristics:

- an interest in languages
- above average academic skills
- good skills at argumentation
- the ability to concentrate for long periods of time on precise, detailed work.

They should enjoy exploring things in depth and using research to find solutions to problems, making decisions and co-ordinating the work of others, and taking a methodical approach to their work.

Educational Requirements

The minimum education requirement in this field is a four year bachelor of arts (BA) degree with a specialization in linguistics. Additional graduate work is usually required. A BA provides a foundation for later graduate work in linguistics or the psychology of language, and for post-graduate training in translation, language teaching and speech/language pathology. A working knowledge of more than one language is required for advanced work in linguistics.

In Alberta, the following institutions offer post-secondary programs in linguistics:

- The **University of Alberta** in Edmonton offers four year BA and BA (Honours) degree programs in Linguistics, a four year BA degree program in Romance Languages with a specialization in Romance linguistics, a Master of Arts (MA) degree program in Japanese Linguistics, and Master of Science (M.Sc.) and Doctor of Philosophy (PhD) degree programs in Linguistics. The entrance requirement for the bachelor's degree programs is a competitive average (65 per cent to 80 per cent) in English Language Arts 30-1 or English 30, a 30 level language other than English or Pure Math 30 (or Math 30), and three other approved 30 level subjects (Social Studies 30 recommended).
- The **University of Calgary** offers four year and five year (co-op) BA degree programs, and MA and PhD degree programs in Linguistics. The entrance requirement for the bachelor's degree programs is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 or English 30, Math 30 or 31 (or Pure Math 30) and three other approved Grade 12 subjects.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Linguists who have at least a bachelor's degree may be employed by:

- the federal government
- private or public institutions
- overseas organizations in the field of educational development and literacy programs
- telecommunication agencies such as telephone companies
- commercial organizations such as software development companies.

Graduate degrees are required for speech pathology and for teaching/research positions in universities and colleges.

Advancement generally takes the form of being assigned more complex projects. Opportunities to advance to supervisory or management positions are limited.

Linguists are part of the much larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since linguists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for linguists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

Livestock/Poultry Producer

Produced MARCH 2005

Livestock/poultry producers own, manage and direct farm operations that raise cattle, swine, sheep, poultry and alternative livestock.

NOC Number(s): 8251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: D M O

Duties

The duties of livestock/poultry producers vary depending on the livestock being raised and the purpose of the operation. In general, however, they:

- determine market requirements and select breeding stock
- breed animals using recognized breeding practices to ensure continuous improvement of herds or flocks
- attend animals during birthing if required
- feed and water animals during each stage of their growth and development (in most cases, this is an automated process)
- control the spread of disease and parasites through vaccination and medication and by separating sick animals from the rest
- maintain proper sanitary conditions and ventilation in barns and other enclosures, and manage waste (manure)
- maintain pasture or grazing lands to ensure animals have enough feed
- purchase, produce, process and store livestock feed
- provide humane transport for livestock
- participate in developing and implementing quality assurance programs
- use computer applications to keep production, breeding and financial records
- evaluate marketing alternatives (packing plants, public stockyards or rural auction markets)
- maintain enclosures and handling systems
- repair and maintain barns, buildings, equipment and machinery.

The also may:

- produce, harvest and store feed crops
- recruit and supervise staff.

Breeders of purebred animals also:

- keep detailed records of identification, performance and pedigree which provide the basis for genetic improvement and sale prices
- develop screening programs to continually improve the herd/flock by culling lower quality animals
- promote their animals to increase market opportunities.

In automated operations, producers must:

- continually clean and sterilize equipment
- monitor the equipment being used
- repair equipment as needed.

Livestock producers usually specialize in one type of operation.

Beef cattle producers own or manage three types of operations:

- Commercial cow-calf operators raise calves for their meat and market them through private sale, public stockyards or rural auction markets.
- Purebred cow-calf operators raise a particular breed of purebred cattle to sell as breeding stock to commercial herds.

- Feedlot operators feed calves or yearlings to a particular level of finish (fatness) before selling them to packing plants for slaughter.

Swine producers own or manage two types of operations:

- Commercial swine producers keep breeding stock for producing piglets or purchase piglets from other producers, and raise piglets to market weight.
- Purebred swine breeders raise purebred hogs for sale as breeding stock to commercial swine producers.

Poultry producers own or manage two types of operations:

- Egg producers ensure the steady production of high quality eggs for consumption or for hatcheries.
- Commercial chicken or turkey producers raise chickens and turkeys for meat and market their meat birds to processing plants located throughout the province.

Sheep farmers/ranchers own or manage three types of operations:

- Purebred breeders supply the sheep industry with top quality breeding stock of various breeds.
- Commercial lamb producers maintain a flock of ewes to produce wool and raise lambs for slaughter.
- Feedlot lamb producers feed lambs obtained from commercial herds on special rations until they are ready for slaughter.

Alternative livestock producers own or manage non-traditional types of livestock operations:

- Breeding stock producers raise animals to supply industry with quality breeding males and females.
- Other producers raise animals for slaughter or for the collection of by-products.

Working Conditions

Livestock/poultry producers spend a great deal of time outdoors in all types of weather conditions. The hours of work are long and at times irregular. Because livestock must be cared for daily, producers must make alternate arrangements before leaving their operations for extended periods.

Although automation and mechanization have helped to make the work less tedious and physically demanding, heavy labour is sometimes required.

Personal Characteristics

Livestock/poultry producers need the following characteristics:

- excellent health
- good organizational skills
- patience, a positive attitude, a high level of personal commitment and a high tolerance for financial risk
- the ability to work independently
- good business skills
- a high degree of self-discipline and resourcefulness.

They should enjoy taking responsibility for their operations, taking a methodical approach to their work, and driving and operating machinery and equipment.

Educational Requirements

(section revised APRIL 2005)

Livestock producers must have a good working knowledge of:

- animal behaviour, nutrition, breeding and genetics
- animal/bird health and veterinary medicine
- herd/flock management and performance indicators
- marketing and market alternatives
- risk management tools for pricing and production.

They must know where to obtain or how to grow the feed necessary for the particular kind of livestock they have, how to manage feeding, when and how to market their product, and how to keep complete and accurate financial and production records.

Individuals acquire the required knowledge and experience by working on farms and taking related education programs.

The **Alberta Green Certificate Farm Training Program** through **Alberta Agriculture, Food and Rural Development** provides training that qualifies individuals as farm technicians, farm supervisors or farm managers. This is

an apprenticeship-type program that combines practical on-farm experience and training with formal education in the form of home study courses, workshops, short courses or college agricultural courses. The Green Certificate Farm Training Program offers three levels of training:

1. farm technician (swine, dairy, cow-calf, beef feed lot, sheep, crop and irrigated crop) may require a year to complete.
2. herdsman or production supervisor may require two or more years to complete.
3. farm business manager may require three or more years of training.

Applicants for the Green Certificate Farm Training Program must be at least 15 years of age, and have a supportive farm trainer and job site. Trainees who are also high school students can receive high school diploma credits in an approved optional curriculum for achieving a Green Certificate.

In Alberta, the following post-secondary institutions offer related education programs.

- **Lakeland College** in Vermilion offers:
  - a two year Livestock Production diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or at least 65 per cent in ELA 30-2 or English 33), Applied or Pure Math 20 (or Math 20 or 23), and one of the following: Biology 20, Chemistry 20, Physics 20 or Science 20.
  - a two year Animal Science Technology diploma program.The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or at least 65 per cent in ELA 30-2 or English 33), Pure or Applied Math 20 (or Math 20 or 23), Chemistry 30 and Biology 30.
- **Lethbridge Community College** offers a two year Agricultural Technology diploma program with a specialization in animal science. The entrance requirement is a high school diploma or equivalent. Math 33, Biology 30 and Chemistry 30 are recommended.
- **Olds College** offers a two year Agricultural Production and Management diploma program with a livestock major (beef, swine or diversified livestock). The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (or English 30 or 33) and at least 55 per cent in Math 20 or 23 and in Biology 20, Chemistry 20 or Science 30. Olds College also offers an Agricultural Business diploma program, and a Bachelor of Applied Agricultural Technology and Entrepreneurship degree program.
- The **University of Alberta** Faculty of Agriculture, Forestry and Home Economics in Edmonton offers four year Bachelor of Science (B.Sc.) degree programs in Agriculture, and Agricultural/Food Business Management. The entrance requirement for the Agriculture program is a high school diploma with a minimum average (65 to 80 per cent) in English 30, Pure Math 30 (or Math 30), Biology 30, Chemistry 30 and one other approved 30-level subject. The entrance requirement for the Agricultural/Food Business Management program is completion of the first year of the Agriculture program with a grade point average (GPA) of at least 2.7/4.
- The **University of Lethbridge** offers four year degree programs in Agricultural Studies. The entrance requirement for the Bachelor of Arts degree program in Agricultural Studies is an average of at least 65 per cent in English 30, Math 30 or Pure Math 30 (or Math 33 or Applied Math 30), two other 30-level subjects plus a fifth Grade 12 subject (Biology 30 is recommended). Admission to the Bachelor of Science degree program in Agricultural Studies requires Biology 30, Chemistry 30, and Math 30 or Pure Math 30. The University of Lethbridge also offers post-diploma degrees in Agricultural Studies for graduates of approved agricultural diploma programs. Entrance requirements are specific to each college partner but, in general, a college GPA of at least 2.5/4 is required.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Some operations are controlled by government regulated quotas. Producers must obtain a quota before they can market poultry.

Employment and Advancement

(section revised JANUARY 2006)

Some livestock/poultry producers own their own operations; others are employed as farm managers. Many people enter the business as labourers or technicians, or through membership in a family-owned partnership or corporation. Due to the enormous capital and operating costs involved in getting into livestock production, it is advantageous for individuals who do not have a farm background to learn all aspects of farming operations.

Individuals seeking employment on farms should contact a local Human Resources Development Canada office. Work

on a farm may be seasonal and sometimes casual. On livestock operations, farm supervisors and machinery operators may be hired on a year-round basis.

Experienced producers with formal training may move into related positions such as livestock services representative or agricultural commodity inspector.

Livestock and poultry producers are part of the larger National Occupational Classification 8251: Farmers and Farm Managers. In Alberta, most people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 35,950 Albertans are employed in the Farmers and Farm Managers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. (**Note**: Since livestock and poultry producers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for livestock and poultry producers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Annual incomes for self-employed livestock/poultry producers vary greatly depending on the type of operation, market trends and operating expenses.

Managers negotiate their own contracts and salaries.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Farmers and Farm Managers occupational group working part-time or full-time earned from **$16,200 to $83,200 a year.** The average salary was **$39,000 a year.**

Locksmith

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Locksmiths install, adjust and repair locks, make keys and change lock combinations. They work on residential, automotive, commercial and institutional locksets and door hardware. Locksmiths may also install and maintain more sophisticated security systems.

NOC Number(s): 7383.2
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Duties vary from one position to another but, in general, locksmiths:

- sell and install high security lock systems and key control systems, window bars, deadlocks and keyless entry locks
- repair, replace or adjust damaged or defective components of entrance and exit doors, including door closers, hinges, electric release mechanisms and sometimes the door itself
- change lock key combinations by inserting new pins into locks
- design complex master key systems for industry, governments and institutions.

Specific duties vary depending on where locksmiths work.

Shop locksmiths are responsible for:

- servicing and adjusting key machines
- repairing locks
- re-keying locks
- making keys for locks
- opening cylinders when keys are not available
- preparing master keys from code
- repairing or making keys for auto locks brought into the shop.

Mobile locksmiths are required to work from mobile units. They are skilled in the duties of shop locksmiths and key duplicators. They are also responsible for:

- repairing locks in the field
- opening door locks with a lock pick
- opening and making keys for automobiles
- installing locks, door closers and emergency exit hardware
- replacing hinges and re-aligning doors
- installing security bars
- installing and repairing electric strikes and electronic security hardware
- servicing and changing combinations on safe and vault doors.

Safe and vault technicians have additional training in safe and vault servicing and trouble shooting. They open, rebuild, paint, move and install safes.

Locksmiths who service bank equipment work with mechanical and electronic time locks, time delay devices, night deposit units, combination, electronic and key locks for vaults and safes.

Working Conditions

Some shops, especially mobile units, may be small and crowded, requiring locksmiths to work around benches, counters and stock. Sometimes they are required to work in awkward and confined spaces. Those working in mobile units may be required to work in adverse weather conditions.

Locksmiths usually work a five-day week but may be on call nights and weekends to respond to emergencies. Self-employed locksmiths often work longer hours.

Locksmiths may be required to move safes weighing over 25 kilograms.

Personal Characteristics

Locksmiths need the following characteristics:

- mechanical ability
- good mathematical ability
- good customer service skills
- patience and stamina
- good physical health
- good vision and hearing
- good hand-eye co-ordination when working with small and intricate parts
- reliability and honesty
- the ablity to work independently
- the ability to keep up to date with changing technology.

They should enjoy doing precision work, problem-solving and helping people.

Educational Requirements

To work in Alberta, locksmiths must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. To be eligible to be an apprentice, a person must also hold a pick license issued under section 353 of the Criminal Code (Canada). The license is issued by Alberta Justice. Persons with a criminal record are ineligible to obtain a pick license or work as a locksmith. Knowledge of computers, electronics, welding, carpentry, and metal work is an asset.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Apprentices are also required to provide their own tools. Most shops supply major specialized tools.

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Red Deer College in Sherwood Park.

Red Deer College also offers technical training by distance delivery in Sherwood Park.

Competency-Based Apprenticeship Training (CBAT) is also offered by Red Deer College.

Outside the apprenticeship program, **Red Deer College** offers a one year Locksmith certificate program by distance through Continuing Education. There are no formal admission requirements. Red Deer College also offers a 12-week in class introductory course.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Experienced locksmiths can continue to upgrade their skills through the **Professional Locksmiths Association of Alberta** and other trade associations

Employment and Advancement

Locksmiths are employed by locksmithing companies, security firms and institutions.

Experienced locksmiths can advance to supervisory positions or set up their own businesses. Alberta certified journeyman locksmiths who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Most locksmiths consider this to be a life-long occupation. The increasing public awareness of the need to protect against theft is creating a need for more security measures, so the demand for locksmiths is anticipated to remain fairly stable.

Locksmiths are part of the larger National Occupational Classification 7383: Other Trades and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Wood Products Manufacturing**
- **Repair, Maintenance, Personal and Other Services**
- **Agriculture**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Other Trades and Related Occupations group, which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since locksmiths form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for locksmiths.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice locksmiths earn 60 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $25 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Locksmiths occupational group earned **up to $42,400 a year**. Those with three years of experience earned from **$27,600 to $34,000 a year.** The average salary was **$32,500 a year**.

Logging/Forestry Equipment Operators

Produced JANUARY 2006

Logging/forestry equipment operators use machinery and equipment to fell, process and load trees at logging sites.

NOC Number(s): 8241.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O m i

Duties

Logging/forestry equipment operators perform a broad range of logging operations to mechanically harvest timber (convert standing trees into forms suitable for use in mills). They operate complex machines which are often tracked or rubber-tired for travelling over rough terrain. Operating these machines may require manipulating levers and foot pedals, or using on-board computers to monitor and control operations.

Depending on the harvesting method being used, several logging/forestry equipment operators may be required at each logging site:

- **Feller-buncher operators** operate tracked, backhoe-like machines that cut trees at the base and pile them in bunches in preparation for being moved elsewhere.
- **Delimber operators** operate machines that remove rot and limbs from felled trees and trim tops to meet required specifications.
- **Harvesters** operate machines that can fell, de-limb and cut trees into logs of full or shortwood lengths. The logs are then bunched into piles for delivery to roadsides.
- **Skidder operators** operate rubber tired, four wheel drive machines that are used to move trees from the cutblock to the roadside and pile trees in a way that allows easy access for delimber or process operators.
- **Processor operators** operate machines that process trees at the roadside. This usually involves stripping limbs, cutting logs into predetermined lengths and piling them for loading.
- **Forwarder operators** operate forwarder machines to transport wood that has been cut to lengths to the roadside.
- **Log loader operators**, sometimes called butt'n'top loaders or picker truck operators, load logs piled at roadsides onto logging trucks for transport to mills. Log loaders look much like cherry pickers with mechanical grapple tongs that grip logs for lifting. Log loader operators raise logs as smoothly and accurately as possible and place them on logging truck trailers to form balanced loads within legal axle-weight limits.
- **Portable chipper operators** operate machines which reduce whole trees to chips and blow them into tractor-trailer units. The chips are then hauled to pulp or paper manufacturing plants.

Although the work of logging/forestry equipment operators is often repetitious, it takes skill and concentration. To operate increasingly sophisticated equipment, operators must have the knowledge required to make harvesting decisions that can have a long term impact on the forest. For example, tree processor operators must know about log quality and be able to interpret printouts generated by on-board computers. They also must be able to maintain complex equipment.

Working Conditions

Logging/forestry equipment operators may work primarily in comfortable cabs or outdoors in noisy environments or extreme weather conditions. They may work on steep, wet or uneven terrain. Operators regularly lift items weighing up to 10 kilograms and occasionally are required to manually lift loads weighing up to 25 kilograms.

Hours of work may include 12 hour shifts and night shifts. Operators may commute daily to the logging site or be away from home for periods of a week or more in isolated logging camps.

Logging/forestry equipment operators are exposed to hazards associated with operating heavy equipment and working in a forest environment. Health and safety risks have been greatly reduced through advances in technology, safety engineering and operating procedures.

Personal Characteristics

Logging/forestry equipment operators need the following characteristics:

- strength and stamina
- good eye/hand co-ordination
- the ability to judge distances accurately
- the ability to remain alert while performing repetitious tasks
- the ability to make quick decisions
- an interest in working in a forest environment
- the ability to work effectively as members of a team
- the communication skills required to pass oral exams and handle the required paper work.

Operators should enjoy driving and operating heavy equipment, having clear rules and organized methods for their work, and servicing machinery.

Educational Requirements

There are no formal educational requirements for logging/forestry equipment operator occupations. However, applicants must be able to read manuals and other materials that are written at a Grade 9 reading level.

Before they are allowed on site, new hires may be required to have:

- a first aid certificate
- Workplace Hazardous Materials Information Systems (WHMIS) training
- Transport of Dangerous Goods (TDG) training
- Sour Gas (H2S) training.

The following qualifications would be definite assets when seeking employment:

- related experience or training (for example, in heavy equipment operation or the use of global positioning and data systems)
- wildlife safety training
- chain saw certificate
- equipment maintenance and service training
- a high school diploma
- forestry or environmental courses (for example, training related to water course crossing, harvesting ground rules, log quality).

In Alberta, the **Northern Lakes College** in Grouard offers a 12 week Woodland Equipment Operator program that includes theory, practicum and simulator training. The entrance requirement is Grade 10 English and math, or mature student status; and a valid Class 5 driver's license. Applicants must complete a health status form and a career investigation.

Most companies provide on-the-job training under the supervision of an experienced, competent worker. The length of the training period varies with the type of machine and the trainee's ability but usually takes about six months. On-the-job training may be supplemented by a few weeks of training sponsored by an equipment manufacturer.

Trained logging/forestry equipment operators must be able to:

- accurately identify tree species
- employ efficient, sound felling and logging practices
- maintain equipment effectively
- read maps
- adapt methods to suit local conditions.

A working knowledge of provincial harvesting rules and regulations governing logging is essential to minimize environmental damage.

Because machinery maintenance is required during the off season and when breakdowns occur, operators should have the mechanical skills required to handle minor repairs and recognize major problems.

Employment and Advancement

Logging/forestry equipment operators are employed by:

- logging contractors
- forestry and lumber companies
- pulp and paper companies
- oil and gas companies (for right-of-way cutting).

Logging/forestry equipment operators often work on a seasonal basis in Alberta, usually from September/October to March/April (depending on the arrival/departure of frost and how wet the ground is). Private contractors may work on a year-round basis depending on the method of logging and where cut blocks are located. Many companies combine their logging operations with other heavy equipment work to create year-round employment.

Operators may advance from operating simpler machines to more complex machines, or move into operating other heavy duty equipment such as backhoes, crawler tractors, scarifiers and graders (for more information, see the Heavy Equipment Operator profile). Those who have several years of work experience and demonstrated leadership abilities may advance to crew foreman and supervisory positions. Some purchase their own equipment and become private contractors.

Logging/forestry equipment operators are part of the National Occupational Classification 8241: Logging Machinery Operators. In Alberta, most people employed in this classification work in the **Forestry and Logging** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (see above)
- trends and **events** affecting overall employment (especially in the Forestry and Logging industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 850 Albertans are employed in the Logging Machinery Operators occupational group which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover which is relatively high in this occupation.

Salary

Hourly wages for logging/forestry equipment operators vary depending on the employer and the type of work performed. Some logging/forestry equipment operators work on a piecework basis (their pay is based on the volume and quality of work performed).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Logging Machinery Operators occupational group working part-time or full-time earned from **$30,200 to $68,000 a year.** The average salary was **$52,200 a year.**

Machinist

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Machinists set up and operate precision metal cutting and grinding machines such as lathes, milling machines, drills and grinders to manufacture and repair products made from metals, plastics, rubber textiles, fibreglass and space age alloys.

NOC Number(s): 7231.1
Minimum Education: Apprenticeship Trade - Grade 11
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Machinists work according to very precise specifications. When there are no blueprints or other specifications, they determine dimensions by logic or by measuring samples using instruments such as micrometers and vernier calipers. Electronic instruments have digital readouts and require the operator to program them for use.

Duties vary from one position to another but, in general, machinists:

- study specifications, charts, drawings or sample parts to determine the machining operation to be performed
- calculate dimensions and tolerances, and prepare working sketches if necessary
- measure and mark the metal
- set up and operate tools, which may be computer numerically controlled, to perform precision machining operations
- fit parts to mechanisms and verify dimensions.

Machinists must understand the effects of heat treatment on metals and be skilled in the performance of various heat treatment processes.

Machinists may work in two types of shops:

- In **job shops**, they make a wide variety of repair parts for many different types of machinery and industrial equipment in situations where waiting for a stock part might jeopardize production schedules.
- In **production shops**, they produce parts using mass production methods. In Alberta, small production runs are more typical.

Working Conditions

Machinists usually work a 37.5 to 40-hour, five-day week but they may be required to work overtime in emergency situations. They may be on their feet for most of their shifts and work in shops that are noisy or dusty and with materials that are dirty. There is some risk of injury when working with sharp metals and power tools.

Machinists may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Machinists need the following characteristics:

- the ability to use their hands skillfully and quickly
- mechanical ability
- the ability to estimate and measure sizes and distances accurately
- the ability to work independently at tasks that require concentration as well as physical effort.

They should enjoy doing creative work with machinery that requires a high degree of skill and precision.

Educational Requirements

To work in Alberta, machinists must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 11 education with a minimum of Math 10 or 13, Pure Math 10 or Applied Math 10 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Machinists also require basic computer knowledge.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Machinist apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year CNC Machinist Technician certificate program. The entrance requirement is Grade 10 with Applied Math 10 or Pure Math 10 and English.
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a one year Machinist Technician certificate program. The entrance requirement is at least 70 Alberta high school credits or equivalent with English 20 or 23 or English Language Arts 20-1 or 20-2 and Pure Math 20, Applied Math 20 or Math 23.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Some machinists are employed wherever equipment is manufactured or repaired. Others work for large organizations such as government departments, or repair and maintenance companies. Employment is reasonably steady for most machinists. However, employment for machinists who work in industries such as oil field component production may be seasonal.

Experienced machinists may advance to positions such as inspector, foreman or superintendent. Alberta certified journeyman machinists who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training. Some machinists start small job shops of their own.

Machinists are part of the larger National Occupational Classification 7231: Machinists and Machining and Tooling Inspectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (see above)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 5,900 Albertans are employed in the Machinists and Machining and Tooling Inspectors occupational group which is expected to grow 2.4 to 3.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since machinists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for machinists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice machinists earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$14 to $25 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Machinists occupational group working part-time or full-time earned from **$14,600 to $101,400 a year.** The average salary was **$49,300 a year.**

© Government of Alberta, Human Resources and Employment

Magnetic Resonance Technologist

Produced JULY 2005

Magnetic resonance technologists operate medical diagnostic equipment that uses magnetic fields and radio waves to produce images of the body.

NOC Number(s): 3215
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M I**

Duties

Magnetic resonance imaging (MRI) scanners create a strong magnetic field which causes hydrogen protons in body tissue to align with the magnetic field. When a radio wave is pulsed into the body at the resonance frequency of water, protons are flipped away from the static magnetic field. When the protons begin to re-align with the magnetic field, they emit a characteristic signature that the scanner detects and processes to produce an image. Three dimensional images are then mathematically compiled on computers for processing, manipulation and storage.

Magnetic resonance images are used to:

- study the vascular system
- detect tumors anywhere in the body
- study body chemistry and function
- image soft tissue structures such as muscles and tendons in the joints.

In general, magnetic resonance technologists:

- ensure the safety of patients, staff and visitors who come in contact with the powerful magnetic field of a MRI scanner
- explain procedures, answer patients' questions as fully as possible and provide emotional support
- position patients and cameras on a table that slides inside a large tube in the MRI scanner
- inject contrast media as required
- set appropriate technical parameters, operate MRI scanners and related equipment, and observe image data on computer monitors during scans
- guide and monitor patients during scans that may take up to 90 minutes to complete
- recognize and respond to life threatening situations
- assist in the education of other medical professionals
- keep records and compile research data
- routinely check scanners and related equipment.

Magnetic resonance technologists work closely with other health professionals and administrative support personnel.

Working Conditions

Magnetic resonance technologists work in hospitals and clinics. They are on their feet for much of their shifts and may be required to do some heavy lifting. Dealing with very sick patients can be stressful.

Working hours vary and may include extended afternoon or evening shifts. In hospital settings, technologists are sometimes on call.

Personal Characteristics

Magnetic resonance technologists need the following characteristics:

- a sense of responsibility and a high degree of integrity
- patience and adaptability

- sensitivity to the needs of ill and injured people
- the ability to put people at ease
- an interest in science and technology
- the ability to maintain a high level of accuracy in their duties
- good organizational skills
- good problem-solving and critical thinking skills
- the ability to work well in a team environment.

They should enjoy using equipment to perform tasks requiring precision, having procedures and standards for their work, and compiling information for research data and statistics.

Educational Requirements

In Alberta, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a 20 month (including practicum experience) Magnetic Resonance Imaging diploma program. The entrance requirement is a high school diploma with at least 60 per cent in English 30, Pure Math 30, Chemistry 30, Physics 30 and Biology 30.

Other Requirements

(section revised AUGUST 2005)

Under Alberta's Health Professions Act, only registered members of the Alberta College of Medical Diagnostic and Therapeutic Technologists (ACMDTT) may call themselves a Magnetic Resonance Technologist, Nuclear Medicine Technologist, Radiographic Technologist or Radiation Therapist. Registered members provide health services listed in Schedule 12 of the Health Professions Act.

Employment and Advancement

(section revised JANUARY 2006)

Magnetic resonance technologists are employed in large, urban hospitals and clinics. Without further education, advancement opportunities are limited.

Magnetic resonance technologists are part of the larger National Occupational Classification 3215: Medical Radiation Technologists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Medical Radiation Technologists occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since magnetic imaging technologists form only a part of the larger occupational group on which this forecast is based, only a small portion of the new positions created will be for magnetic imaging technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire.

Salary

(section revised OCTOBER 2005)

Full-time salaries for magnetic resonance technologists start at about **$50,000 per year (2005 estimate).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Radiation Technologists occupational group working part-time or full-time earned from **$37,300 to $71,800 a year.** The average salary was **$57,600 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Mail Sorter

Produced NOVEMBER 2005

Mail sorters collect, process and sort incoming and outgoing mail, parcels and oversized mail for dispatch and delivery.

NOC Number(s): 1461.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M i o**

Duties

In the past, mail sorters manually sorted parcels into bags or bins and mail into pigeon holes in a case or mail rack. This still must be done for mail that for some reason cannot be sorted by machine. However, the vast majority of mail is sorted by machines operated by mail sorters in large mail and parcel processing plants.

Mail sorters' duties vary depending on the size and type of sortation plant. On a rotation basis, they may perform all or some of the following duties:

- accept and check containers of mail/parcels from large volume mailers, couriers and contractors
- lift and unload containers of mail/parcels onto equipment that transports items to sortation stations
- check items to ensure that addresses are legible and correct, that sufficient postage has been paid or the appropriate documentation is attached, and that items are in a condition suitable for processing
- segregate items requiring special handling
- clear jams in sortation equipment
- remove containers of sorted mail/parcels and transfer them to designated areas according to established procedures and deadlines
- perform related tasks such as opening and labeling mail containers.

In highly automated sortation plants, mail sorters:

- operate computer controlled keyboards or voice recognition equipment to direct items according to established routing schemes
- use equipment such as forklifts to move containers of mail.

In small post offices and outlets that provide private courier or parcel express services, mail sorters may perform a variety of other duties as well, including serving the public at a counter. Sorters employed by private courier services sort all types of freight.

In larger outlets, duties are divided among mail sorters and postal clerks (for more information, see the Postal/Wicket Clerk occupational profile).

Working Conditions

Mail sorters in urban areas usually work shifts in an environment that resembles an assembly line. Many work evening and night shifts. They may be on call or work part-time.

Mail sorters work in a fast-paced, time-sensitive environment and, despite the use of automated equipment, the work is often physically demanding. Mail sorters may spend most of their shift on their feet and routinely lift items weighing up to 22.7 kilograms.

Personal Characteristics

Mail sorters need the following characteristics:

- physical strength and stamina
- able to read quickly and accurately

- manual and finger dexterity
- a good memory.

They should enjoy having clear guidelines and organized methods for their work, meeting the challenge of accurately sorting quantities of mail within specified time periods, and operating automated equipment.

Educational Requirements

Mail sorters are trained on the job. For employment with Canada Post, job applicants must:

- have recent physical work experience
- have good references
- pass a series of practical and oral tests.

Mail sorters who operate Canada Post mail coding machines must learn to sort a minimum number of letters per hour within a specified training period. Rate and hour requirements vary depending on the type of coding machine. Experience in activities that require finger dexterity (e.g. typing or playing the piano) is helpful.

Employers in the private sector require similar qualifications. Warehouse experience is a definite asset.

Employment and Advancement

(section revised JANUARY 2006)

Mail sorters are employed by Canada Post or private courier/parcel express services. Sortation plants are generally located in major urban centres, often in industrial areas.

Canada Post hires prospective mail sorters as temporary employees who are on call. At first, they may work only a few days in a month. More than three years of seniority may be required to become a permanent employee. Private courier and parcel express services may hire new employees on a part-time basis only.

Mail sorters employed by Canada Post are members of the Canadian Union of Postal Workers (CUPW). Those employed by private sector companies may be required to join unions such as the Teamsters Union.

Many mail sorters stay in the occupation until they retire. Without additional education, advancement opportunities for experienced mail sorters are limited.

Mail sorters are part of the larger National Occupational Classification 1461: Mail, Postal and Related Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,250 Albertans are employed in the Mail, Postal and Related Clerks occupational group which is expected to grow up to 1.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since mail sorters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for mail sorters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Mail, Postal and Related Clerks occupational group working part-time or full-time earned from **$12,500 to $28,500 a year.** The average salary was **$17,100 a year.**

Hourly wages for mail sorters employed by Canada Post range from **$20.55 to $21.28 an hour (2005 figures)**.

© Government of Alberta, Human Resources and Employment

Make-Up Artist

Produced MAY 2003

Make-up artists prepare performers for stage, television and film appearances and photography shoots by applying make-up to portray a physical character, enhance beauty or create special effects.

NOC Number(s): 5226.5
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Make-up artists work with news broadcasters and actors in television, motion picture, stage and theatre productions. In general, they assess performers' skin to ensure that make-up will not cause break-outs or skin irritations, and use make-up to:

- enhance performers' features for close-up camera shots or the scrutiny of a live audience
- restore the normal colour values of the hands and face under bright production lighting
- create special features or effects such as scars, aging or a particular "look" for a character (e.g. evil or suspicious)
- create the illusion of a distorted or alien body (often with the assistance of three-dimensional prosthetics).

For each television, film or stage production, make-up artists analyze the script, noting events that affect each character's appearance (e.g. time period changes, weather elements, sickness, injuries) and plan for each scene. They meet with producers, directors and production designers to discuss the desired look for all characters and must integrate those wishes with those of the performer.

Make-up artists must duplicate their work precisely time after time (e.g. reproduce a bruise months later for the filming of a subsequent scene) because scenes are often shot out of order. Considerable research, testing and experimentation is required to create time period make-ups and special effects for science fiction and horror characters.

Working Conditions

Make-up artists may stand for many hours at their work. In film-making, a typical working day is 14 hours long but much of the time is spent watching and waiting.

Make-up artists work under pressure to finish the job within a set period. They may be required to travel to fairly remote location shoots for television or film, and work in all kinds of weather and terrain. The bags they carry to work sites may weigh up to 10 kilograms. Lifting requirements are considerably more for artists who must also carry things like stools and lighting equipment.

Personal Characteristics

Make-up artists need the following characteristics:

- good colour vision
- creativity and imagination
- confidence and an outgoing personality
- good communication and interpersonal skills
- flexibility and adaptability
- good time management skills
- the ability to take direction and accept criticism
- the ability to consistently create an environment in which performers can focus on their work
- the ability to work independently and with others in a team environment
- the ability to work long hours.

They should enjoy performing tasks requiring precision, compiling information about character requirements and developing innovative approaches to their work.

Educational Requirements

Make-up artists need skills and knowledge related to:

- the proper care and use of make-up and related equipment and accessories such as wigs, facial hair pieces and special adhesives
- hair styling techniques
- colour, shading, texture and mixing pigments, and the effect of light on pigment and how pigment affects colour
- the use of highlight and shadow to create the illusion of three dimensions
- airbrushing techniques
- skin care, esthetics, human anatomy and how aging affects the face and body
- the safe use of adhesives and solvents for the application and removal of prosthetics
- market their services.

Make-up artists must also be able to market their services and negotiate contracts.

There is **no minimum education requirement** in this occupation. However, successful completion of a Workplace Hazardous Materials Information System course and a Set Etiquette couse is required to work on an **International Alliance of Theatrical Stage Employees** project. A background in theatre or visual arts is a definite asset.

Prospective make-up artists must gain experience working under the supervision of recognized make-up artists. Make-up artists may acquire the skills and knowledge they need by taking related courses offered:

- in some high school drama programs
- in post-secondary drama programs (for more information, see the Actor occupational profile)
- by private vocational schools.

Prospective make-up artists are advised to discuss their education plans with program graduates and other make-up artists before enrolling in an education program.

Creating character make-up requires research. Make-up artists need to build and maintain files of people's faces representing different nationalities, historical periods, and interesting or unusual looks. They also need to build a portfolio of photographs or videotapes of their best work to show potential employers.

Make-up artists must supply their own equipment and make-up; a good basic make-up kit costs about a thousand dollars. Top make-up artists in Alberta may have eight to fifty thousand dollars worth of equipment and supplies, much of which must be replaced often. Larger film and television projects often pay a Kit Fee.

Other Requirements

Some theatre and television studios only hire IATSE members and require make-up artists to have insurance.

Employment and Advancement

Make-up artists usually work on a contract basis for:

- film and video production companies
- recording studios
- television studios
- theatre companies
- dance and opera companies
- photographers.

Most work opportunities are located in large urban centres. Until make-up artists establish contacts and build a reputation in the entertainment industry, they usually do other types of work as well. They may:

- do personal make-overs for people preparing for special occasions such as weddings, graduations, photography sessions or Hallowe'en
- work as sales clerks at cosmetic counters in department stores or as cosmeticians (for more information, see the Cosmetician and Esthetician occupational profiles)
- teach theatrical makeup or in the fashion and modelling industry
- do work for funeral homes.

They may also do volunteer work for local theatres, non-profit film companies or community cable television stations to gain experience and recognition.

In Alberta, even the most successful make-up artists do other types of work as well. The entertainment industry is limited and employers generally prefer to hire make-up artists they have worked with before.

Salary

(section revised OCTOBER 2005)

Fees depend on the nature of the contract and the reputation of the artist. In film and television, minimum rates are set by the IATSE collective agreement.

There are slow months of work as well as busy ones so make-up artists may need to supplement their incomes at times with other part-time jobs.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Technical and Co-ordinating Occupations in Motion Pictures, Broadcasting and the Performing Arts occupational group working part-time or full-time earned from **$14,600 to $66,400 a year.** The average salary was **$28,900 a year.**

© Government of Alberta, Human Resources and Employment

Management Consultant

Produced NOVEMBER 2005

Management consultants are contracted by organizations to provide independent and objective advisory services in areas such as strategic planning, facilitation, quality assurance, education and training, investment, information technology, identification and analysis of management problems, solution development or strategy implementation.

NOC Number(s): 1122.1
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I D S**

Duties

Organizations hire management consultants when they do not have the required resources or expertise in-house, or they need external objective advice. They may ask consultants to help them manage change or solve problems.

In general, management consultants:

- define the nature and extent of a project by gathering information (which may include conducting research to determine the current efficiency and effectiveness of managerial policies and procedures)
- analyze the data collected and use their background knowledge to develop proposals for improving methods, systems or procedures
- present their recommendations to the client organization and, if their recommendations are accepted, for implementing those recommendations.

Most management consultants specialize in particular fields (e.g. accounting, communications, finance, human resources, marketing, materials management, organizational restructuring, quality and efficiency). There are as many different types of specializations as there are types of business challenges. Following are a few possibilities:

- **Finance consultants** provide advice on matters such as pricing securities, business valuation and economic forecasting.
- **Human resources consultants** advise about recruitment practices, compensation and benefits packages, pension funding, workforce diversification and employee development programs.
- **Litigation consultants** work with lawyers to develop case strategies, courtroom exhibits and tactics, and provide economic analyses.
- **Marketing consultants** work with companies seeking innovative ways to market new or existing products and services.
- **Operations consultants** help organizations increase productivity by improving business processes.
- **Organizational change consultants** work with clients undergoing a fundamental reorientation in the way they operate.
- **Quality management consultants** help organizations improve the quality of their products and services.
- **Strategic consultants** help organizations with strategic planning for the foreseeable future (which may include developing a growth strategy, restructuring, marketing internationally, buying/selling assets or revitalizing leadership).
- **Technology consultants** help organizations implement new technologies (for more information, see the Information Systems Consultant occupational profile).

Working Conditions

Management consultants often work long hours. They divide their time between their own offices and clients' workplaces, and may spend a significant amount of time travelling. When observing industrial operations, they must follow the same safety procedures as other visitors and workers.

Management consultants work under the pressure of deadlines and clients' high expectations. Many clients expect to see dramatic improvements in business performance in a very short period of time. Within the client organization, consultants also may have to deal with hostile employees who are afraid of losing their jobs.

Personal Characteristics

Management consultants need the following characteristics:

- energy, confidence and creativity
- the ability to remain objective, think analytically, synthesize information and exercise good judgement
- good listening skills, tact and the ability to communicate with all kinds of people in person and in writing
- the ability to work effectively as part of a team
- the ability to recognize the dynamics and politics of an organization
- creative problem solving skills.

They should enjoy analyzing managerial methods and conducting research, taking charge of situations, and providing critical assessments and constructive advice.

Educational Requirements

Management consultants are experts in specific disciplines or business areas. A master's degree, preferably in business administration (MBA), is generally considered the best academic preparation for this field. However, a master's degree is not required. Some successful consultants have a bachelor's degree or years of experience in middle and upper levels of management.

Since management consulting covers many professional and industrial fields, bachelor's degrees in a variety of disciplines provide a suitable background for those wishing to go on to an MBA program. Bachelor's degree programs are offered by universities and colleges located throughout the province. Admission requirements vary but generally include a high school diploma with English Language Arts 30-1 and four other suitable 30 level subjects.

In Alberta, the following universities offer MBA programs:

- **Athabasca University** offers an MBA program via distance education. Applicants usually have a bachelor's degree or a professional designation (e.g. a professional accountant designation) or have successfully completed the Graduate Diploma in Management program **and** have three years of supervisory, professional or managerial experience. Applicants who have equivalent qualifications are considered.
- The **University of Alberta** in Edmonton offers full-time and part-time MBA programs and joint programs with other degrees. MBA students may focus on international business, natural resources and energy, technology commercialization, leisure and sport management, or public management. Applicants must have a B average (3.0 in a 4 point system) or equivalent academic standing in the last two years of a completed bachelor's degree program, pass a Graduate Management Admission Test (GMAT)and provide three letters of reference, a statement of intent and a resume outlining education, interests and work experience. Most students have two to five years of work experience before entering the MBA program.
- The **University of Calgary** Haskayne School of Business offers full-time and part-time MBA programs with specializations in finance, marketing, entrepreneurship and innovation, and global energy management and sustainable development. Applicants must have a 3.0 average or equivalent academic standing in the last two years of a completed bachelor's degree program, achieve at least 550 on the GMAT, and submit a resume, statement of purpose and three letters of appraisal. Three years of work experience is recommended..

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certified Management Consultant is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Certified Management Consultant, you must be a registered member of the Institute of Certified Management Consultants of Alberta (ICMCA). You do **not** have to be registered if you do not call yourself a Certified Management Consultant.

Employment and Advancement

(section revised JANUARY 2006)

Management consultants are self-employed or employed by established consulting firms. Those who are self-employed must market their services, and establish and maintain professional credibility. This field is highly competitive.

Management consultants employed by consulting firms may become team leaders and, later, senior consultants. Only a relative few achieve the status of senior partner in large consulting firms.

After gaining experience as an employee in a consulting firm, many management consultants set up their own firms. Even experienced and respected managers who leave salaried positions to become consultants often must subcontract their services to established consultants to begin establishing their own client base.

Management consultants are part of the larger National Occupational Classification 1122: Professional Occupations in Business Services to Management. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**
- **Finance, Insurance and Real Estate**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,250 Albertans are employed in the Professional Occupations in Business Services to Management occupational group which is expected to grow 2.8 to 3.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 280 to 390 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since management consultants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for management consultants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Income figures for business management consultants vary greatly. Those just starting out as self-employed consultants may make very little in their first years. Highly successful self-employed consultants may earn six-figure annual incomes.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Professional Occupations in Business Services to Management occupational group working part-time or full-time earned from **$11,500 to $179,800 a year.** The average salary was **$66,500 a year.**

© Government of Alberta, Human Resources and Employment

Manufacturing Engineer

Produced JUNE 2004

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

NOC Number(s): 2141
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Manufacturing engineers are concerned with all the activities involved in the creation and production of industrial and commercial products such as:

- machinery and equipment
- consumer electronics (e.g. telephones, television sets)
- home appliances (e.g. refrigerators, toasters)
- home fixtures (e.g. furniture, windows)
- oil and gas products
- leisure equipment (e.g. snowboards, roller blades)
- food and beverages
- vehicles (e.g. cars, planes)
- clothing and textiles
- environmental and recycled products.

In general, manufacturing engineers use their knowledge of product design, materials and parts, fabrication processes, tooling and production equipment capabilities, assembly methods and quality control standards to develop, evaluate and improve manufacturing systems and methods. This may involve:

- working with planning and design staff on product design and tooling to ensure efficient production processes
- designing pay systems
- analyzing space requirements and workflow, and designing the layout of equipment and workstations to ensure maximum efficiency and an ergonomically sound work environment
- working with regulatory agencies to ensure safety, environmental and design standards are met
- deciding whether to produce parts and subassemblies inhouse or buy them from other companies
- setting production standards and changing production manufacturing methods and automating processes
- working with vendors to determine product specifications and arranging for the purchase of equipment, materials or parts
- estimating production times, staffing requirements and related costs
- designing, planning and setting up the equipment used to make products
- devising racks, bins and other containers to hold and protect parts and subassemblies
- anticipating future manufacturing requirements and potential.

In smaller companies, manufacturing engineers often have a wide range of responsibilities from the product development stage through to shipping the final product.

Manufacturing engineers may specialize in areas such as:

- product design (e.g. using computer aided design (CAD) software to design a product that meets performance, quality and cost targets; anticipating how products will impact society, including how they will be used and decomposed or recycled)
- process design and improvement (e.g. developing specifications for processes to optimize efficiency, developing new processes or automating existing processes)

- facility design (e.g. designing manufacturing facilities, selecting locations and equipment, designing materials handling systems)
- operations management (e.g. capacity management, production planning and control, production scheduling, inventory management and logistics)
- information systems (e.g. designing, implementing and operating advanced information systems for manufacturing systems throughout the enterprise).

Working Conditions

Working conditions vary from one employer to another. Manufacturing engineers may be required to observe appropriate safety precautions (e.g. use protective equipment such as hard hats or safety glasses) to avoid injury when working on the production floor. Some work in "clean rooms" where products are produced under rigid standards of cleanliness to prevent contamination.

Most manufacturing engineers work standard weekday office hours but overtime may be required to meet project deadlines. Some travel may be required to meet with vendors, suppliers and customers.

Personal Characteristics

Manufacturing engineers need the following characteristics:

- the ability to think in mathematical and abstract terms
- the ability to visualize three-dimensional objects from two-dimensional drawings
- an interest in technical processes
- persistence and determination when problem-solving
- well-developed communication skills in person, in writing and for group presentations
- good interpersonal skills and the ability to work as part of a team
- the ability to anticipate the effects of change.

They should enjoy:

- synthesizing information to develop flexible and integrated manufacturing systems and procedures
- using equipment and instruments to perform tasks requiring precision
- taking responsibility for projects and supervising the work of others.

Educational Requirements

Manufacturing engineers must have a **bachelor's degree in a related engineering discipline**. They need skills and knowledge in:

- engineering materials
- manufacturing processes and production methods
- process automation and robotics
- engineering design approaches and computer tools
- quality engineering
- human and organizational behaviour
- operations management (inventory control and production scheduling)
- manufacturing facility design
- business and financial issues
- information management systems
- technology management.

In Alberta, the **University of Calgary** offers four and five year Bachelor of Science (B.Sc.) degree programs in engineering with a specialization in manufacturing engineering. The five year program includes a 12 to 16 month work placement in the fourth year. The entrance requirement for both programs is a high school diploma with an overall average of at least 78 per cent in the following subjects: English 30, Chemistry 30, Math 30 or Pure Math 30, Math 31, and Physics 30.

For information about related programs of study, see the Industrial Engineer and Mechanical Engineer occupational profiles.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Manufacturing engineers must keep up to date regarding technological advancements and new manufacturing techniques by participating in professional development activities and taking continuing education courses.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Manufacturing engineers are employed by manufacturing and processing companies, and consulting firms.

Experienced engineers may advance to administrative and management positions. Those who have graduate degrees may teach at the post-secondary level or conduct research.

Manufacturing engineers are part of the larger National Occupational Classification 2141: Industrial and Manufacturing Engineers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Other Manufacturing**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 900 Albertans are employed in the Industrial and Manufacturing Engineers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since manufacturing engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for manufacturing engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial and Manufacturing Engineers occupational group working part-time or full-time earned from **$25,700 to $113,200 a year.** The average salary was **$68,600 a year.**

© Government of Alberta, Human Resources and Employment

Mapping Technologist

Produced APRIL 2005

Mapping technologists gather, analyze, interpret and use geospatial information to define locations of natural and manmade features on, above and below the earth's surface. This information is used for applications in many fields (e.g. environmental and land use planning, natural resources, geology, agriculture).

NOC Number(s): 2255.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M O**

Duties

In general, mapping technologists design and prepare maps, interpret aerial photographs, operate interpretive and airborne remote sensing equipment, and develop and operate geographical information systems (GIS). Their duties vary from one position to another in this rapidly evolving occupation. They may:

- collect, manipulate and present data using ground surveys, remote sensing, photogrammetry (aerial photographs), laser ranging, global positioning systems (GPS) or hydrographic methods
- provide data to be used in geographical information systems (GIS)
- use information from GPS systems to determine geographic positions
- use digital mapping techniques, computer interactive graphics and computer assisted design and drafting (CAD) software to generate maps and related graphs and charts
- process digital data to compile geographic information in numeric and graphic formats
- process aerial and satellite photographs to produce rectified distortion free images, topographic maps, aerial-photo mosaics and related products
- operate analytical or soft copy stereoscopic plotting and computer graphics equipment
- plan control points and flight plans for aerial surveys
- operate airborne remote sensing equipment such as aerial survey, film or digital cameras, laser or radar sensors and scanners
- operate computer-based remote sensing interpretive equipment to prepare images, graphic and alphanumeric reports, maps and charts from airborne or satellite data
- verify the integrity and accuracy of data contained in remote sensing image analysis systems and extract survey and thematic information
- operate specialized computer hardware and software to model, manage, analyze and display geospatial data
- develop specialized computer software, internet-based GIS, database and business applications to customize geographic information
- integrate external software such as spreadsheets and statistical packages with GIS software
- train and provide technical support for GIS users.

Working Conditions

Mapping technologists work primarily in office environments in large or small cities. Sometimes, they use land, water or air transport to collect data in the field.

Personal Characteristics

Mapping technologists need the following characteristics:

- good mathematical skills
- good stereo vision
- the ability to pay close attention to details

- good communication skills
- good problem-solving skills.

They should enjoy generating maps, analyzing information to compile data and performing work that requires precision.

Educational Requirements

The recommended educational background for mapping technologists is a **two year diploma in geomatics engineering technology**. It is possible to learn on the job and take related courses part-time but not common.

In Alberta, the following post-secondary institutions offer related diploma programs:

- **Lethbridge Community College** offers a two year Geomatics Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with Math 30 or Pure Math 30 (or at least 65 per cent in Math 33 or Applied Math 30), Physics 20 or Science 30, and at least 60 per cent in English Language Arts 30-1 (or English 30).
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Geomatics Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (English 30 or 33), Pure Math 30 or equivalent, and one of the following: Science 30, Physics 30 or Chemistry 30. Part of this program is available through Continuing Education.
- **Olds College** offers a two year Geographical Information Systems diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 (English 30 or 33), Pure or Applied Math 20 (Math 20 or 23), Biology 20 and Chemistry 20 or Science 30. This program focuses on agricultural applications.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Geomatics Engineering Technology diploma program with specializations in surveying or mapping. The admission requirement is a high school diploma or equivalent with English 30 or 33, Pure or Applied Math 30, and Science 30 or Physics 20. English 30 and Pure Math 30 are recommended.

Graduates of these programs can transfer credits if they wish to enrol in the Bachelor of Applied Information Systems Technology degree program at SAIT, or Geomatics Engineering degree programs at the **University of Calgary** or the **University of New Brunswick**.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary.

The Alberta Society of Surveying and Mapping Technologies (ASSMT) offers four levels of Certified Survey Technician and Technologist (CST) certification based on a combination of education and experience in the surveying and mapping industry. In general, the more related education an applicant has, the fewer the years of experience required for certification.

The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of two year diploma programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Mapping technologists are employed by:

- private sector surveying and mapping companies
- forestry, architectural, engineering and other consulting firms
- computer software companies
- natural resource companies
- utilities
- all levels of government
- the Canadian Armed Forces.

Experienced mapping technologists may advance to supervisory positions in which they are responsible for other technologists and support personnel.

Mapping technologists are part of the larger National Occupational Classification 2255: Mapping and Related

Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Mapping and Related Technologists and Technicians occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Mapping and Related Technologists and Technicians occupational group working part-time or full-time earned from **$27,900 to $66,300 a year.** The average salary was **$51,200 a year.**

© Government of Alberta, Human Resources and Employment

Market Gardener

Produced MARCH 2005

Market gardeners grow fresh produce (vegetables, berries, herbs and spices) and flowers for sale directly to consumers at farmers' markets and through farm gate sales or u-pick operations.

NOC Number(s): 8251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M O**

Duties

Market gardeners' duties vary with the seasons. In winter and early spring, they:

- determine the appropriate crops for local climate and soil conditions
- select crops and seed varieties
- develop plans for crop rotation, pest control, crop quantities and planting schedules
- order and purchase seeds or plants, equipment, fertilizer and other production materials and supplies
- plant seeds and plants
- grow seedlings in greenhouses for transplanting in the spring.

From spring to harvest time, market gardeners:

- prepare fields and seed beds
- plant crops
- irrigate and fertilize crops
- till and fertilize soil
- control weeds, diseases and insects.

Harvest activities vary with the type of crop. Market gardeners may:

- use specialized harvesters or harvesting aids
- create and maintain a market for crops by advertising and maintaining a regular presence at markets
- clean, trim, cool, grade, package and transport crops to market
- sell produce to customers at farmers' markets or at the farm on pick-your-own operations.

On a year-round basis, market gardeners:

- order, install and repair machinery and equipment
- hire and supervise staff
- keep detailed records regarding crops and operation schedules
- establish and develop marketing techniques and market outlets
- expand and improve their production and marketing knowledge and supervisory skills.

Because most market gardeners are business owners, they also have administrative duties related to the running of a small business.

Working Conditions

Market gardeners work indoors and outdoors in all kinds of weather. The work can be tedious and physically demanding (lifting loads weighing up to 25 kilograms may be required). However, garden tractors and machinery have reduced manual labour requirements.

There is no quiet period in the worklife of market gardeners. Growing a quality product and maintaining quality throughout the marketing process is essential to maintaining sales. During harvest season, speed is essential in getting crops off the field and to market. The first fresh fruits and vegetables to reach the market command the highest prices. Working hours may be long and irregular.

Market gardens are usually located close to major centres because sales potentials are determined by the number of potential customers within reasonable travelling distance.

Personal Characteristics

Market gardeners need the following characteristics:

- good physical health and stamina
- an interest in working with the land, plants and people
- good observation skills
- the ability to supervise and motivate others.

They should enjoy taking responsibility for their operations, taking a methodical approach to their work, and operating machinery and equipment.

Educational Requirements

Market gardeners need a working knowledge of:

- local soil and climate conditions
- weed, disease and insect problems and their control (including pesticide application)
- appropriate plants and plant cultivars (e.g. seeds)
- planting and harvesting techniques
- selling and marketing
- how to operate a small business.

A farm background is helpful but those who do not have a farm background may gain practical experience by working on a market farm and taking related courses.

Olds College offers:

- Horticulture certificate and diploma distance education programs.
- a one year collaborative Horticultural Technician program at Medicine Hat College. The entrance requirement is a high school diploma or equivalent with Grade 12 English and Grade 11 math, biology and chemistry.
- a two year Horticulture diploma program with a specialization in production horticulture. The entrance requirement is a high school diploma or equivalent with at least 55 per cent in Grade 12 English and Grade 11 math, biology and chemistry.
- a post-diploma Bachelor of Applied Science degree program in production horticulture. The entrance requirement is a diploma in horticulture from a recognized school, or equivalent, and four months of work experience in the horticulture industry.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Courses in horticulture are also offered by other sources:

- The **Alberta Farm Fresh Producers Association** provides marketing and production information through print materials, workshops and an annual Horticultural Congress and Trade Show.
- Local school boards often offer short horticultural and gardening courses.
- **Alberta Agriculture, Food and Rural Development** provides production and marketing information through its fruit/vegetable and agri-tourism programs.

The **Canadian Nursery Landscape Association** has a national certification program for retail garden centre employees. Members who wish to be certified must have at least 2,000 hours of industry experience (1,000 hours credit given for education), pass a written examination testing technical knowledge and pass a series of practical skills tests.

Employment and Advancement

(section revised JANUARY 2006)

Most market gardeners are self-employed small business owners. Some have large enough operations that they hire farm workers during busy seasons. These positions may allow a person to learn how a successful market garden operation is run.

New gardeners are advised to start with a small operation, growing crops that are relatively easy to cultivate and suited to local growing conditions. As they gain experience and learn customer preferences, market gardeners can expand to more demanding crops and novelty items to round out their operations.

Advancement in this occupation generally takes the form of building a larger business.

Market gardeners are part of the larger National Occupational Classification 8251: Farmers and Farm Managers. In Alberta, most people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 35,950 Albertans are employed in the Farmers and Farm Managers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. (**Note**: Since market gardeners form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for market gardeners.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

One of the most appealing features of market gardening is that substantial profits can be reaped from a small amount of land. Input costs for machinery are minimal so overhead costs are lower than for other types of farming. Much, however, depends on the weather, market demand and grower management. In general, market garden crops are more weather sensitive than traditional crops.

Market gardeners often supplement their income through other means. With the introduction of improved storage techniques, growers are able to keep storable crops and sell them during the winter months, providing per year-round income. Some smaller operations earn a secondary income from the sale of goods such as bedding plants or jams and jellies.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Farmers and Farm Managers occupational group working part-time or full-time earned from **$16,200 to $83,200 a year.** The average salary was **$39,000 a year.**

Market Research Analyst

Produced OCTOBER 2005

Market research analysts use data gathered about marketplace participants (customers, employers and competitors) and their responses to products and services. This information is used to improve market success.

NOC Number(s): 4163
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **D I S**

Duties

Working as part of a team of marketing professionals, market research analysts:

- research the market potential of a product or service
- identify factors that may enhance product or service acceptance
- determine the nature and size of market segments
- help companies determine their position in the marketplace
- help develop and evaluate marketing and communications programs
- measure customer and employee satisfaction
- track market trends.

Depending on the nature of the employing organization, this may involve activities such as:

- keeping track of industry statistics and monitoring trends in trade literature
- collecting and analyzing information about competitors and market shares
- conducting or commissioning primary research (e.g. telephone surveys, focus groups) or surveys of secondary (published) sources, or purchasing syndicated or proprietary research from outside suppliers
- analyzing and presenting research findings
- modelling and analyzing customer response information contained in customer transaction databases
- forecasting the size of future markets.

Working Conditions

Market research analysts work primarily in offices and libraries. They may be required to work long hours to meet project deadlines or adjust their schedules to meet with people who are not available during regular business hours. Some travel may be required to meet with clients or supervise surveys.

Personal Characteristics

Market research analysts need the following characteristics:

- an interest in analyzing and interpreting statistical data
- an interest in meeting many different types of people
- excellent listening, communication and presentation skills.

They should enjoy co-ordinating information, planning and administering projects, developing policies and programs and consulting with others.

Educational Requirements

In Alberta, no specific academic qualifications are required to enter the field of market research. However, computer skills and a degree or diploma in marketing are definite assets. Advancement prospects are best for those who have one or more degrees that include courses in marketing, statistics and social research methods.

In Alberta, many post-secondary institutions offer programs in business administration, management and commerce. The following institutions offer degree or diploma programs with a specialization, concentration or major in marketing:

- **Grande Prairie Regional College** offers a two year Business Administration diploma program with a specialization in marketing. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 and Applied or Pure Math 30, or equivalent.
- **Lethbridge Community College** offers a two year Business Administration diploma program with a major in marketing. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 and Applied or Pure Math 30, or equivalent.
- **Medicine Hat College** offers a two year Marketing diploma program. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.
- **Mount Royal College** in Calgary offers a two year diploma program in Business Administration with a specialization in marketing management. The entrance requirement is a high school diploma with at least 60 per cent in English Language Arts 30-1 and Applied or Pure Math 30, or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers two year diploma programs in Business Administration and Bilingual Business Administration with specializations in marketing. The entrance requirement for the Business Administration program is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 or 30-2 (or English 30 or 33) and Applied or Pure Math 30 (or Math 30 or 33). Completion of an introductory computer or keyboarding course is strongly recommended. The entrance requirement for the Bilingual program is a high school diploma with ELA 30-1 or 30-2, a 30-level French course and Math 20, 30 or 33.
- **Red Deer College** offers a two year Business Administration program with a specialization in marketing. The entrance requirement is a high school diploma with an average of at least 60 per cent in English Language Arts 30-1 and Pure Math 30 (or 65 per cent in ELA 30-2 and Applied Math 30), or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Business Administration diploma program with a specialization in marketing. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (or English 30 or 33) and Pure or Applied Math 30 (or Math 30, 31, or 33), or equivalent. SAIT also offers a two year Business Administration Automotive Marketing program.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Commerce (B.Com.) degree program and a five year B.Com. co-operative education degree program with a major in marketing. The entrance requirements are a competitive average in English Language Arts 30-1, Pure Math 30, a 30-level science and two other approved Grade 12 subjects, or equivalent, and completion of one pre-professional year.
- The **University of Calgary** offers a four year Bachelor of Commerce (B.Comm.) degree program and a five year B.Comm. co-operative education degree program with a specialization in marketing. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30)and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five credit subject.
- The **University of Lethbridge** offers a four year Bachelor of Management degree program, five year combined degree programs and post-diploma programs with specializations in marketing. The entrance requirement for bachelor's degree programs is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or equivalent), two other appropriate 30 level subjects and a fifth Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Before enrolling in an education program, prospective marketing research analysts should discuss their education options with people currently working in the field.

Employment and Advancement

(section revised JANUARY 2006)

Market research analysts are employed by:

- manufacturing, processing and other large corporations
- market research suppliers
- management consulting firms

- advertising agencies
- business associations
- government departments.

Advancement opportunities vary depending on the analyst's qualifications, skills and work ethic, and the size and nature of the organization. Those who are the most effective at selling their ideas are the mostly likely to advance.

Market research analysts are part of the larger National Occupational Classification 4163: Business Development Officers and Marketing Researchers and Consultants. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,800 Albertans are employed in the Business Development Officers and Marketing Researchers and Consultants occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since market research analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for market research analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for market research analysts vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Business Development Officers and Marketing Researchers and Consultants occupational group working part-time or full-time earned from **$18,800 to $126,800 a year.** The average salary was **$64,200 a year.**

Salaries for market research analysts tend to be toward the lower end of this range.

Marketing Manager

Produced OCTOBER 2005

Marketing managers plan, organize, co-ordinate and control the activities of organizations or departments within organizations involved in marketing products or services.

NOC Number(s): 0611.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: D S I

Duties

Marketing managers' duties vary depending on the size of the organization, the nature of its business and how centralized its operations are. In general, marketing managers may be responsible for:

- the profitability of products, lines or services
- sales, sales forecasting and strategic planning
- advertising and promotion
- market research and consumer needs assessment
- branding activities (ensuring that corporate and product images are consistent with reality)
- product development and scheduling
- pricing and distribution
- budget planning
- purchasing
- the allocation of resources
- customer service.

In large organizations, marketing managers direct and oversee the work of other managers in the marketing department (e.g. the managers of sales, advertising and marketing research units). In small organizations, marketing managers are responsible for all marketing activities.

Working Conditions

Marketing managers work in an office environment but often work more than the standard 40 hours a week. Extensive travel, including international travel, may be required.

Personal Characteristics

Marketing managers need the following characteristics:

- a creative, outgoing and energetic personality
- the motivation and flexibility required to succeed in a competitive environment
- the ability to deal effectively with stress
- strong project management and motivational abilities
- the ability to analyze qualitative and numerical information
- problem solving and decision making skills
- the ability to communicate persuasively in person and in writing.

They should enjoy co-ordinating information and directing the work of others, negotiating business contracts and developing innovative approaches to problems.

Educational Requirements

Most large organizations prefer to hire marketing managers who have business-related post-secondary education (e.g. a bachelor's or master's degree with a specialization in marketing, or a diploma in marketing) plus several years of related experience (e.g. sales or customer service experience). Some organizations require their marketing managers to have post-secondary education related to the type of product or service they offer (e.g. a degree or diploma in chemistry or engineering).

In Alberta, many post-secondary institutions offer programs in business administration, management and commerce. The following institutions offer degree or diploma programs with a specialization, concentration or major in marketing:

- **Grande Prairie Regional College** offers a two year Business Administration diploma program with a specialization in marketing. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 and Applied or Pure Math 30, or equivalent.
- **Lethbridge Community College** offers a two year Business Administration diploma program with a major in marketing. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 and Applied or Pure Math 30, or equivalent.
- **Medicine Hat College** offers a two year Marketing diploma program. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.
- **Mount Royal College** in Calgary offers a two year diploma program in Business Administration with a specialization in marketing management. The entrance requirement is a high school diploma with at least 60 per cent in English Language Arts 30-1 and Applied or Pure Math 30, or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers two year diploma programs in Business Administration and Bilingual Business Administration with specializations in marketing. The entrance requirement for the Business Administration program is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 or 30-2 and Applied or Pure Math 30, or equivalent. Completion of an introductory computer or keyboarding course is strongly recommended. The entrance requirement for the Bilingual program is a high school diploma with ELA 30-1 or 30-2, a 30-level French course and Math 20, 30 or 33, or equivalent.
- **Red Deer College** offers a two year Business Administration program with a specialization in marketing. The entrance requirement is a high school diploma with an average of at least 60 per cent in English Language Arts 30-1 and Pure Math 30 (or 65 per cent in ELA 30-2 and Applied Math 30), or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Business Administration diploma program with a specialization in marketing. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (or equivalent) and Pure or Applied Math 30 (or Math 30, 31, or 33). SAIT also offers a two year Business Administration Automotive Marketing diploma program.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Commerce (B.Com.) degree program and a five year B.Com. co-operative education degree program with a major in marketing. The entrance requirements are a competitive average in English Language Arts 30-1, Pure Math 30, a 30-level science and two other approved Grade 12 subjects, or equivalent, and completion of a pre-professional year.
- The **University of Calgary** offers a four year Bachelor of Commerce (B.Comm.) degree program and a five year B.Comm. co-operative education degree program with a specialization in marketing. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30)and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five credit subject.
- The **University of Lethbridge** offers a four year Bachelor of Management degree program, five year combined degree programs and post-diploma programs with specializations in marketing. The entrance requirement for bachelor's degree programs is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or equivalent), two other appropriate 30 level subjects and a fifth Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Before enrolling in an education program, prospective marketing managers should discuss their education options with people currently working in the field.

Employment and Advancement

(section revised JANUARY 2006)

Marketing managers are employed by private and public organizations such as:

- manufacturers
- retailers
- wholesalers
- service sector businesses
- not-for-profit agencies
- market research organizations
- advertising agencies.

Advancement opportunities vary depending on the size and nature of the organization and the manager's qualifications. Those who have post-secondary education in marketing may advance to senior management positions in large organizations.

Marketing managers are part of the larger National Occupational Classification 0611: Sales, Marketing and Advertising Managers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Wholesale Trade**
- **Information, Culture and Recreation**
- **Professional and Technical Services**
- **Other Manufacturing**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 12,800 Albertans are employed in the Sales, Marketing and Advertising Managers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 120 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since marketing managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for marketing managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries in this occupation vary according to the size and nature of the organization and the scope of the manager's responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Sales, Marketing and Advertising Managers occupational group ranged from **$17,900 to $134,000 a year.** After three years, salaries ranged from **$19,400 to $139,600 a year.** The average salary was **$84,500 a year**.

© Government of Alberta, Human Resources and Employment

Massage Therapist

Produced NOVEMBER 2004

Massage therapists assess the soft tissue and joints of the body and administer massage treatments to relieve pain and symptoms of stress, or to develop, maintain, rehabilitate or augment physical function.

NOC Number(s): 3235.4
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S O**

Duties

Massage therapists may be trained in a variety of different massage techniques but, in general, they:

- conduct client assessments to determine treatments required
- administer appropriate massage treatments including soft tissue manipulation, relaxation techniques, stretching techniques, finger/hand pressure to specific points on the body, hydrotherapy, manual stripping or cross-fibre friction of muscle tissue, trigger point therapy and drainage techniques
- consult with other health care professionals such as physiotherapists, chiropractors, physicians and psychologists to develop treatment plans for clients
- maintain treatment records.

Massage therapists also may provide guidance and information about techniques for postural improvement and stretching, strengthening, relaxation and rehabilitative exercises.

Working Conditions

Most massage therapists work indoors in quiet, clean environments. They usually work with one client at a time using a table or chair, oils, powders, towels and sheets. Those who travel to client offices and homes must lift equipment weighing up to 10 kilograms.

This work is strenuous and requires standing for long periods of time. Hours of work depend on the work setting and the amount of work therapists are capable of doing. Self-employed therapists may work evenings and weekends, or work part-time hours in several different locations.

Personal Characteristics

Massage therapists need the following characteristics:

- good communication skills including excellent listening skills
- good health
- good posture
- a sensitive touch
- an interest in wellness issues
- a friendly, outgoing personality and a caring attitude
- the ability to work in a standing position for long periods of time
- the ability to concentrate while administering massage treatments.

Massage therapists should enjoy developing treatment plans according to established guidelines and methods, helping people, and using equipment such as whirlpool baths and infra-red lamps.

Educational Requirements

(section revised FEBRUARY 2006)

Massage therapist is not a regulated occupation in Alberta. The following education/training is recommended:

- cardiopulmonary resuscitation (CPR) and first aid
- anatomy, physiology and pathology
- massage techniques
- movement patterns
- the principles of assessment
- body responses to stress or illness, and therapy
- how to use body mechanics to prevent fatigue and work-related injuries
- ethics and psychology as they relate to their work
- how to prevent infection.

Self-employed massage therapists also need excellent business skills in areas such as accounting, marketing and record-keeping.

Before choosing a training route, prospective massage therapists are advised to talk to several people who are already employed this field.

In Alberta, training programs for massage therapists are offered by the following public institutions:

- **Grant MacEwan College** in Edmonton offers a two year Massage Therapy diploma program. The entrance requirement is a high school diploma or equivalent with one of the following: Biology 30, Chemistry 30 or Science 30.
- **Lethbridge Community College** offers a 12 month Massage Therapy certificate program on a full-time or part-time basis. The entrance requirements are a high school diploma with at least 60 per cent in English 30 or 33 and Biology 30; working knowledge of word processing, spreadsheets and database software; evidence of recent medical examination and immunization records.
- **Medicine Hat College** offers one year certificate and two year diploma programs in Massage Therapy. The entrance requirement is a high school diploma or equivalent, including at least 60 per cent in English 30 or 33, Biology 30 and two other 30-level subjects (one of which must be a science) or equivalent. Medicine Hat College also offers a two semester, post diploma Sports Massage Certificate program.
- **Mount Royal College** in Calgary offers a full-time 12 month Massage Therapy certificate program and a part-time Massage Therapy certificate program (courses offered evenings and weekends). The entrance requirement is a high school diploma with Biology 30 or equivalent.

A number of private vocational schools in Alberta offer training programs, often in particular massage techniques:

- The **Alberta Institute of Massage** in Red Deer offers a 25- and a 64-week Massage Therapy Certificate program and a 36- and a 78-week Advanced Massage Therapy Diploma program.
- The **Canadian College of Massage and Hydrotherapy** in Calgary offers a 69-week Massage Therapy program.
- The **CDI College of Business, Technology and Health Care** in Calgary and Edmonton offers an 88-week Massage Therapy program.
- The **Calgary College of Holistic Health and Clinics Inc.** offers a seven week, full-time Swedish Relaxation Massage program days and a 15-week part-time program.
- **Edmonton College of Swedish Relaxation Massage Inc.** in Sherwood Park offers a 26-week Massage Therapy program.
- The **Foothills College of Massage Therapy Inc.** in Calgary offers a 26-week Massage Therapy program and a 28 week Advanced Massage Therapy program.
- The **International Academy of Esthetics** in Sherwood Park offers a 350- hour Massage Practitioner program.
- The **MH Vicars School of Massage Therapy** in Edmonton offers a 88-week Remedial Massage Therapy program.
- **MaKami College Inc.** in Edmonton offers a 25-week, full-time Massage Therapy program and a 52 week, part-time program.
- **McMurray Training Institute** in Fort McMurray offers a 30-week, part-time Swedish Relaxation Massage program and a 27-week, part-time Massage Therapy program.
- The **Northern Institute of Massage Therapy Inc.** in Red Deer offers 40-week Advanced Therapeutic Massage program and a 28-week Basic Relaxation Massage program.
- The **Northwestern School of Massage** in Calgary offers a Relaxation/Swedish Massage program by distance education and a 12-week program.

- **Prairie Training Institute** in Grande Prairie offers a 30-week, part-time Swedish Relaxation Massage program and a 27-week, part-time Massage Therapy program.
- The **Professional Institute of Massage and Fitness** in Calgary offers 37-week Massage Therapy program.
- The **Somatics Institute Ltd. School of Massage** in Edmonton offers an 80-week Massage Therapy program.
- The **Southern Alberta Institute of Massage** in Edmonton offers a 24-week Massage Therapy program.
- The **St. Albert Training Institute** offers a 30-week, part-time Swedish Relaxation Massage program and a 27-week, part-time Massage Therapy program.

Admission requirements vary but generally include a high school diploma or equivalent. Some programs require Biology 30. For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Massage therapists usually attend ongoing professional development workshops to keep their skills up to date. Continuing education programs may be offered on an as needed basis.

Other Requirements

Massage therapist is not a regulated health profession in Alberta.

Some municipalities require massage therapists to be licensed under local by-laws.

Employment and Advancement

(section revised JANUARY 2005)

Most massage therapists are self-employed. They may travel to clients' offices or homes, or work in:

- their own homes or offices
- gyms
- health clubs or spas
- massage centres
- clinics shared with chiropractors, physicians, physical therapists, psychotherapists, psychologists, naturopaths or dentists
- resorts.

Those who work in clubs, centres or clinics are generally responsible for building and maintaining their own clientele and operating as a small business. Advancement in this occupation generally takes the form of building a larger client base.

Massage therapists are part of the larger National Occupational Classification 3235: Other Technical Occupations in Therapy and Assessment. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Income ranges in this occupation depend on the type of employment, location and number of clients. Massage therapists may charge from **$20 to $45** for a **half hour** treatment and **$40 to $75** for a **one hour** treatment. Some massage therapists bill 20 to 30 client hours a week. Massage therapists who contract their services to clinics receive a percentage of billings.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Massage Therapists group earned from **$11,300 to $80,900 a year.** The average salary was **$34,000 a year**.

Materials Engineering Technologist

Produced JULY 2004

Materials engineering technologists work in engineering teams that select and test materials for particular industrial and engineering uses and investigate materials-related problems.

NOC Number(s): 2233.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M d**

Duties

In general, materials engineering technologists test, analyze and inspect:

- metals (ferrous and non-ferrous)
- non-metallic materials (soils, concrete, asphalts, ceramics, plastics, composites)
- fabricating procedures (e.g. welding, forging, casting, machining).

They interpret and use codes, standards and specifications, and perform quality assurance tasks such as:

- mechanical testing (evaluating tensile, compressive, hardness, impact and fatigue characteristics of materials)
- metallurgical testing (using metallography microscopy, photography and image analysis) to assess the quality of materials
- nondestructive testing (using tests such as x-ray and gamma ray radiography, ultrasonic, eddy current, liquid penetrant, magnetic particle) to assess the internal integrity of products
- analyzing the causes of corrosion-related failures to find methods of minimizing the effects of corrosion
- determining the causes of equipment and machine failures.

Working Conditions

Materials engineering technologists use computers to analyze data collected during testing procedures and prepare technical reports. They work in offices, laboratories and outdoors. Lifting up to 25 kilograms is required.

Personal Characteristics

Materials engineering technologists need the following characteristics:

- an aptitude for mathematics and science (especially physics and chemistry)
- mechanical ability
- an interest in working with processes and equipment
- the ability to work independently when required
- good interpersonal skills for working effectively and co-operatively as part of a technical or engineering team.

They should enjoy doing precise work with tools, equipment and instruments, analyzing test results and finding innovative solutions to problems, and taking a methodical approach to their work.

Educational Requirements

The minimum educational requirement for materials engineering technologists is a **two year diploma in a related technology**.

In Alberta, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Materials Engineering Technology diploma program. The admission requirement is a high school diploma or equivalent with English 30 or 33, Math 30 (or equivalent, or 60 per cent in Math 33), and one of: Science 30, Physics 30 or Chemistry 30. An interest in and aptitude for applied sciences, especially those with a physics and chemistry base, is a definite asset to anyone considering this program.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Materials engineering technologists are employed by:

- manufacturing companies producing materials such as metals, plastics, concrete or composites
- equipment manufacturing companies producing pressure vessels, pipeline, oil field equipment, mining equipment, and machinery and electronics components
- engineering and testing companies providing services such as nondestructive inspection, corrosion testing and control, failure investigations and materials testing to the processing and manufacturing industries
- government and university materials testing laboratories
- the technical sales departments of service and manufacturing companies
- quality assurance groups within chemical, petrochemical processing and manufacturing industries.

Experienced technologists may advance to supervisory and managerial positions.

Materials engineering technologists are part of the larger National Occupational Classification 2233: Industrial Engineering and Manufacturing Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Other Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,450 Albertans are employed in the Industrial Engineering and Manufacturing Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since materials engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for materials engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Industrial Engineering and Manufacturing Technologists and Technicians occupational group working part-time or full-time earned from **$20,800 to $83,100 a year.** The average salary was **$68,200 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

© Government of Alberta, Human Resources and Employment

Materials/Metallurgical Engineer

Produced JULY 2004

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

NOC Number(s): 2142
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

In general, materials engineers:

- study the properties and characteristics of metallic and non-metallic materials (e.g. resistance to corrosion)
- develop, test and apply new materials that are tailored to meet specific requirements (e.g. alloys, composites, plastics, ceramics)
- use thermal and mechanical treatments to modify alloy properties
- research, develop and monitor processes for extracting metals from ores
- determine appropriate methods for fabricating and joining materials
- monitor material performance and evaluate material deterioration
- analyze material failures to find causes and develop solutions.

Materials engineers can be broadly grouped into three areas of practice:

- **Extractive metallurgical** engineers obtain pure metals through various extractive processes.
- **Physical materials** engineers study the nature, structure and physical properties of metals and their alloys, and their responses to applied forces.
- **Materials selection** engineers evaluate technical and economic factors as they relate to how metals, plastics, ceramics or other available materials perform in particular applications and the causes of material failures.

Working Conditions

Materials engineers may work in offices, plants, laboratories, field sites or a combination of these settings. In offices, they prepare proposals and budgets, manage projects, analyze data and write reports. In laboratories, they design and direct the testing or control of processing procedures. In plants, they co-ordinate processing and laboratory work or they examine the performance of materials in the process facility. In the field, they examine materials performance and joining methods. Senior engineers may spend more time in an office environment performing managerial functions.

Personal Characteristics

Materials engineers need the following characteristics:

- a natural sense of scientific curiosity
- the ability to analyze and solve problems
- the ability to work independently or in a team environment
- effective communication skills.

They should enjoy being innovative, doing work that requires precision and being an expert in their field.

Educational Requirements

The minimum education requirement to work as a materials engineer is a **bachelor's degree** in materials engineering, metallurgical engineering or materials science. Research positions generally require graduate (master's, doctoral) degrees.

In Alberta, the Department of Chemical and Materials Engineering at the **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree in materials engineering. The admission requirement is a high school diploma with at least 80 per cent in English 30, Math 30 or Pure Math 30, Math 31, Chemistry 30 and Physics 30.

The University of Alberta also offers a co-operative engineering program that consists of periods of academic study alternating with periods of planned work experience in industry. Students in the co-operative program usually take five years to complete degree requirements.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

The main employers of materials engineers are:

- inspection firms
- materials testing laboratories
- the automotive industry
- the microelectronic industry
- primary metal producers
- large fabricators of metals
- government and industrial research establishments
- industries that manufacture aircraft parts, machinery and electrical equipment
- engineering consulting firms specializing in corrosion, pipeline integrity and failure analysis.

In Alberta, materials engineers also are employed by:

- petroleum production and refining industries (e.g. oil sands companies)
- pipe production and installation industries
- coal and chemical industries
- mineral processing plants.

Materials engineers who have production experience may move into sales or trouble-shooting positions dealing with customer complaints. An increasing number of materials engineers work for consulting firms and in research and development, resolving problems ranging from the interaction of molten metal with brick furnace linings to the failure of thin-film circuit elements in microelectronic components. Experienced materials engineers may advance to management positions.

In Alberta, over 75 per cent of people employed as materials and metallurgical engineers work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 350 Albertans are employed in the Metallurgical and Materials Engineers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Metallurgical and Materials Engineers occupational group earned **up to $153,900 a year**. Those with three years of experience earned from **$39,700 to $102,900 a year.** The average salary was **$73,300 a year**.

© Government of Alberta, Human Resources and Employment

Mathematician

Produced NOVEMBER 2005

Mathematicians use logical reasoning to study structure. They do fundamental research and develop techniques and insights that can be applied in a variety of fields, including physics, engineering, finance and organizational structure and decision making.

NOC Number(s): 2161.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M D**

Duties

Mathematicians research fundamental mathematics and its application to a wide variety of problems. At an abstract level, they assemble sets of assumptions and explore the consequences of each set. In science (for example, physics, chemistry, engineering), social science (for example, psychology, sociology, political science) and business (for example, finance, actuarial science, risk analysis) fields, they also may:

- apply established methods of numerical analysis, statistics and other known techniques
- develop new and more efficient methods of dealing with mathematical processes.

For example, mathematicians may develop mathematical models of the ocean floor, changing demographic characteristics or blood flow; or apply number theory to computer security problems or the analysis of seismological survey results.

When confronted with any problem that has some mathematical basis, an organization may consult a mathematician for advice about:

- what is required to assure the existence of a solution to the problem
- the accuracy with which a solution can be found and what it may cost.

Mathematicians may work in any of the following areas:

- **Applied mathematicians** use mathematical theories and techniques to solve practical problems in business, engineering and the sciences. For example, they may investigate the cost of establishing a new business or the mathematical aspects of drilling for oil.
- **Theoretical mathematicians** seek to advance mathematical science by developing new principles and new relationships between existing mathematical principles.
- **Mathematical consultants** assist with business and research projects that demand advanced knowledge of mathematics. They may work on mathematical problems in a variety of fields (for example, in mechanics, electromagnetic theory, economics, communication networks or the petrochemical industry).
- **Mathematics teachers and professors** instruct students in subjects such as arithmetic, algebra, geometry, pre-calculus, calculus, statistics and advanced mathematics.
- **Financial mathematicians** develop mathematical and probability models of stock markets, options and currency futures.
- **Statisticians and actuaries** use mathematics to solve problems in finance, business and government. For more information, see the Statistician and Actuary occupational profiles.

Mathematicians in industry frequently work on problems in areas such as operations research, statistical design or marketing. Mathematicians in government are usually specialists in statistics, economics, management science, physics or engineering.

Working Conditions

Although mathematicians usually work in an office environment with standard office hours, overtime is not uncommon. They may work alone or as part of a team.

Personal Characteristics

In addition to talent and an interest in mathematics, mathematicians need the following characteristics:

- the ability to think logically
- the ability to formulate scientific problems in mathematical terms
- the ability to apply individual and prolonged effort to a problem
- the ability to communicate ideas clearly
- creativity and imagination
- the ability to work independently with little supervision and in a team environment.

They should enjoy synthesizing data, applying mathematical techniques and advising others regarding mathematical applications and methods.

Educational Requirements

Ideally, prospective mathematicians should combine a general education with **an honours degree or specialization in mathematics, or mathematics and a related subject.** Mathematicians often have graduate degrees in mathematics (which require an acceptable average in a four year bachelor's degree program in mathematics for admission). Post-graduate work in pure or applied mathematics at the doctoral (PhD) level is usually required for mathematicians employed in a research environment.

Students interested in pursuing a career in mathematics should explore mathematics beyond the high school curriculum:

- read books about mathematics
- work on mathematical problems found on the **Canadian Mathematical Society** website and in contest papers, magazines and books
- participate in mathematics clubs, fairs and university outreach programs.

In Alberta, the following post-secondary institutions offer **four year** degree programs in mathematics:

- **Concordia University College of Alberta** in Edmonton offers a B.Sc. degree in Mathematics. The entrance requirement is an average of 60 per cent in English 30, Math 30 or Pure Math 30, two 30-level sciences (Physics 30, Chemistry 30 or Biology 30) and one other appropriate 30-level subject.
- The **University of Alberta** in Edmonton offers general and honours Bachelor of Arts (BA) degree programs and a Bachelor of Science (B.Sc.) degree program in Mathematics with honours or specializations in mathematics, applied mathematics, computational science, economics and mathematics, actuarial science, mathematics and finance, and mathematical physics. The entrance requirement for the BA degree program is an average of at least 65 per cent in English 30, Math 30 or Pure Math 30 and three other approved Grade 12 subjects. Admission to the BA honours degree program also requires Math 31. The entrance requirement for the B.Sc. degree program is an average of at least 75 per cent in English 30; Math 30 or Pure Math 30; Math 31; one of Physics 30, Chemistry 30 or Biology 30; and one other approved Grade 12 subject. Students may include an industrial internship in their program. Admission to the B.Sc. honours program requires an average of at least 80 per cent. The University of Alberta also offers master's and doctoral degree programs in mathematics and statistics. The University of Alberta in Camrose also offers bachelor degree programs in mathematics.
- The **University of Calgary** offers BA and B.Sc. degree programs in Mathematics with specializations in actuarial science, applied mathematics, general mathematics, pure mathematics, and statistics. The entrance requirement is a high school diploma or equivalent with an average of at least 70 per cent in English 30, Math 30 or Pure Math 30 and three other appropriate Grade 12 subjects (Math 31 recommended). Students wishing to enter the applied mathematics specialization should have Physics 30. The University of Calgary also offers master's and doctoral degree programs in mathematics.
- The **University of Lethbridge** offers B.Sc., Bachelor of Arts and Science (B.A.Sc.), and Bachelor of Management (B.Mgt.) degree programs in Mathematics. The entrance requirement is an average of at least 65 per cent in English 30, Math 30 or Pure Math 30 and two other 30 level subjects (Math 31 recommended) plus a fifth Grade 12 subject. The University of Lethbridge also offers five year combined bachelor's degree programs and master's degree programs in mathematics.

For information about Bachelor of Education degree programs, see the Secondary School Teacher occupational profile.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Mathematicians are employed by:

- financial institutions
- governments
- insurance companies
- pension-benefit consulting firms
- science and engineering consulting firms
- scientific institutions and research agencies
- schools, colleges and universities.

The computer industry also employs many people who have mathematical training. These positions are generally located in the head offices of large organizations.

In large institutions, mathematicians who have strong communication and people skills may advance to management positions.

Mathematicians are part of the larger National Occupational Classification 2161: Mathematicians, Statisticians and Actuaries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Educational Services**
- **Food and Beverage Products Manufacturing**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Mathematicians, Statisticians and Actuaries occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since mathematicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for mathematicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Mathematicians are employed in such diverse fields and positions that it is difficult to identify a typical salary range.

In 2003, Albertans in the Mathematicians, Statisticians and Actuaries occupational group earned earned an average salary of **$58,800 a year** (2003 Alberta Wage and Salary Survey).

© Government of Alberta, Human Resources and Employment

Meat Cutter

Produced MAY 2003

Meat cutters prepare standard cuts of meat, poultry and fish, and products such as sausage in processing plants or retail food establishments.

NOC Number(s): 6251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O d**

Duties

Meat cutters in retail establishments prepare meat cuts and products so they appear attractive and catch the shopper's eye. Duties vary from one job to another but, in general, retail meat cutters:

- receive, store and rotate meat products
- maintain storage, preparation and sales areas in accordance with an approved sanitation program
- ensure meat quality
- package, price and display meat items
- prepare and market "ready to cook" and partially/fully prepared meat items
- display meat products properly.

Retail meat cutters may also:

- serve customers
- negotiate with representatives from supply companies
- cut orders to meet special needs
- keep records of meat sales
- maintain inventories.

Meat cutters in meat processing plants use knives and specialized equipment to slaughter, break, cut, bone and trim meats into a variety of cuts for domestic and international markets. They may work in a particular department performing a specific task (e.g. boning out hams), or work on a variety of tasks throughout the day. Those who work in the hotel, restaurant and institution departments of the plant prepare individual-size portions by breaking down larger portions of meat and trimming them to pre-determined specifications.

Working Conditions

Meat cutters work indoors, generally in temperature-controlled conditions ranging from minus two to four degrees Celsius. They are on their feet most of their work day and routinely lift items weighing up to 25 kilograms. The risk of injury from repetitive motions and working with sharp instruments such as knives and saws is reduced by following appropriate safety precautions.

Most meat cutters work shifts totaling 40 hours a week.

Personal Characteristics

Meat cutters need the following characteristics:

- good health (a physical examination may be required for employment)
- the strength and stamina required to stand for long periods and lift/move heavy pieces of meat
- good eye-hand co-ordination, depth perception and colour vision
- the ability to follow instructions
- the ability to work independently and in a team environment
- the ability to communicate courteously and effectively with co-workers and supervisors and, in the case of retail meat cutters, the general public.

Meat cutters should enjoy having clear rules and organized methods for their work, using tools and equipment to perform tasks requiring precision, and taking responsibility for projects.

Educational Requirements

There are **no formal education requirements** for meat cutters. Many have learned on the job. However, most employers prefer to hire job applicants who are high school graduates or have related post-secondary education. On-the-job training takes one to two years depending on the trainee's related previous experience and education.

In Alberta, the following institutions offer related training:

- **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a five month Retail Meat Cutting certificate program. The entrance requirement is Grade 10 or equivalent, including English and math.
- **Olds College** offers a five-month Meat Processing certificate program that includes three weeks of work experience. Applicants must be at least 18 years of age and in good physical condition. A high school diploma or equivalent is recommended.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a 24-week Retail Meat Cutting certificate program that has a work experience component. The entrance requirement is a minimum of 35 high school credits (Grade 10) including English 10 or 13 or Humanities 10, and Pure or Applied Math 10 or Math 13.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

However they acquire their training, meat cutters must know and practice good personal hygiene, and follow sanitation and safety procedures. Retail meat cutters must be familiar with advanced merchandising techniques.

Employment and Advancement

(section revised JANUARY 2006)

Meat cutters are employed by meat processing establishments or retail businesses such as supermarkets, specialty sausage and delicatessen stores, and independent meat markets.

Retail trainees usually start with routine work such as removing bones and gradually learn more complex skills such as rolling and tying roasts, and curing meat. Processing plant meat cutters usually start on an assembly line.

Experienced meat cutters may advance to supervisory positions such as meat department manager in a supermarket or team co-ordinator in a meat processing plant. Some meat cutters open their own meat markets or move into related positions in sales, inspection or quality assurance.

Meat cutters are part of the larger National Occupational Classification 6251: Butchers and Meat Cutters - Retail and Wholesale. In Alberta, most people employed in this classification work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,250 Albertans are employed in the Butchers and Meat Cutters - Retail and Wholesale occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since meat cutters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for meat cutters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Butchers and Meat Cutters - Retail and Wholesale occupational group working part-time or full-time earned from **$13,300 to $49,400 a year.** The average salary was **$28,500 a year.**

Mechanical Engineer

Produced SEPTEMBER 2004

Mechanical engineers research, design and evaluate machines, devices, equipment, systems and processes, and plan and oversee their development, installation, operation and maintenance.

NOC Number(s): 2132
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I O D**

Duties

Mechanical engineers work on a wide variety of mechanical systems including:

- industrial systems and processing (e.g. in refineries, petrochemical facilities, mines)
- manufacturing systems, plants and products
- environmental control systems (heating, ventilating and air conditioning)
- transportation equipment (land, sea, air, space)
- utility systems and infrastructure delivering water, gas, oil and power
- emerging fields such as robotics, biomedical engineering, commercial space travel, lasers, nanotechnology, telecommunications and computer components and systems.

There are many different specializations in mechanical engineering. The following illustrate some of the possibilities.

Design engineers create the plans for new products, machines, industrial equipment, instruments, processes and systems and provide technical support for changes to existing ones.

Development engineers analyze proposed products or processes, test them out and attempt to improve them.

Manufacturing engineers plan, develop and research the tools, processes, machines and equipment needed to produce quality products economically (for more information, see the Manufacturing Engineer occupational profile).

Sales engineers are involved in technical sales and service.

Research engineers investigate and develop new materials, processes, engineering tools and phenomena that may enable the creation of new products, systems and applications.

Working Conditions

Mechanical engineers may work in office, laboratory, shop or field environments. Field work is required to review site conditions and inspect the construction of designs. Mechanical engineers also may work in research and development laboratories, or the production departments of factories where they supervise the testing and manufacture of products.

Personal Characteristics

Mechanical engineers need the following characteristics:

- the ability to think in mathematical and abstract terms
- the ability to visualize three-dimensional objects from two-dimensional drawings
- a practical, mechanical inclination
- an interest in technical processes
- persistence and determination
- well-developed oral and written communication skills
- good interpersonal skills and the ability to work as part of a team.

They should enjoy being innovative, doing work that requires precision, making decisions and supervising others.

Educational Requirements

The minimum education requirement for mechanical engineers is a **bachelor's degree in mechanical engineering**.

In Alberta, the Faculties of Engineering at the **University of Alberta** in Edmonton and the **University of Calgary** offer four year bachelor degree programs in mechanical engineering. Both institutions also offer a co-operative education or internship program consisting of periods of academic study alternating with periods of planned work experience in industry. Co-operative/internship engineering degree programs usually require five years to complete.

The admission requirement for engineering programs at both the University of Alberta and the University of Calgary is a high school diploma with an overall average of 78 or 80 per cent in the following subjects:

- English 30
- Chemistry 30
- Pure Math 30
- Math 31
- Physics 30.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Mechanical engineers must be prepared to adapt to dramatic changes in skill requirements throughout their careers.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Mechanical engineers are employed in various industries including:

- natural resources (forestry, agriculture, oil and gas, mining)
- energy conversion (thermal and hydro-electric power stations, solar, wind and bio-fuels)
- processing (petrochemical/refining, food and beverage production)
- manufacturing (vehicles, appliances, furnishings, telecommunication equipment)
- construction (mechanical systems such as elevators or air conditioning, heating and ventilation systems)
- transportation (road, rail, air, marine, space vehicles and systems)
- utility systems (water, natural gas, electricity).

Experienced engineers may advance to administrative or management positions. Those who have graduate degrees may teach at the post-secondary level or conduct research.

In Alberta, over 75 per cent of people employed as mechanical engineers work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Utilities**
- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,950 Albertans are employed in the Mechanical Engineers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 140 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Mechanical Engineers occupational group working part-time or full-time earned from **$26,500 to $148,300 a year.** The average salary was **$78,600 a year.**

Mechanical Engineering Technologist

Produced JULY 2004

Mechanical engineering technologists may work independently or with mechanical engineers in designing, drawing, developing and modifying various types of products, machines, mechanical systems and manufacturing processes.

NOC Number(s): 2232.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Mechanical engineering technologists may be primarily involved in:

- mechanical design and construction
- manufacturing
- plant engineering
- safety issues
- industrial engineering
- estimating
- project and quality management.

In general, they:

- prepare specifications and drawings for mechanical components, equipment and systems
- inspect the construction of mechanical installations
- analyze the cost efficiency of projects
- prepare layouts for new machines, tool designs, plants and equipment
- conduct and analyze performance tests on various components, products or equipment.

Those working in design may provide CAD (computer aided design) services for engineering teams.

Some mechanical engineering technology graduates are employed as agricultural engineering technologists who design and develop specialized agricultural equipment, machines and structures.

Working Conditions

Mechanical engineering technologists usually work indoors in offices, laboratories, manufacturing and processing facilities but sometimes work outdoors at construction sites. They use computers for drafting, word processing and spread sheet functions. Overtime may be required to meet project deadlines.

Personal Characteristics

Mechanical engineering technologists need the following characteristics:

- the ability to visualize three-dimensional objects from two-dimensional drawings
- good sketching (drawing) skills
- good mathematics and mechanical problem-solving skills
- good oral and written communication skills
- the ability to work effectively as part of a team.

They should enjoy doing precise work, obtaining and analyzing test results, finding innovative solutions to problems and taking a methodical approach to their work.

Educational Requirements

The minimum educational requirement for working as a mechanical engineering technologist is a **diploma in mechanical engineering technology**.

In Alberta, the following institutions offer two year Mechanical Engineering Technology diploma programs.

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton. The entrance requirement is a high school diploma or equivalent with English 30, Pure Math 30 or Math 30 (or at least 60 per cent in Math 33 or Applied Math 30) and one of Science 30, Physics 30 or Chemistry 30. 33-level courses will only be considered after an interview with the program head, and students presenting Applied Math 30 may be required to upgrade. A career investigation report is required.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary. The first year of this program is a common first year in the Mechanical Technologies program. Students must achieve a grade point average (GPA) of at least 2.0 to progress to Mechanical Engineering Technology in their second year. The entrance requirement for the Mechanical Technologies program is a high school diploma with the following courses: English 30 or 33, Pure Math 30 and Physics 20, or successful completion of the Pre-Careers program at SAIT.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Mechanical engineering technologists are employed by:

- consulting engineering companies
- industrial, fabrication, manufacturing and construction companies
- mechanical equipment sales companies
- processing companies (e.g. in the chemical, oil, gas, pipeline and food industries)
- government and regulatory agencies.

They usually work as members of a team, specializing in fields related to industrial and plant engineering, production planning and control, mechanical design, estimating or quality management. They may also find employment as:

- computer drafting specialists
- designers
- planners
- inspectors
- cost estimators
- quality assurance coordinators
- purchasers.

Mechanical engineering technologists may advance to engineering supervisory or managerial positions, or move into self-employment in consulting or other service businesses.

Mechanical engineering technologists are part of the larger National Occupational Classification 2232: Mechanical Engineering Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,750 Albertans are employed in the Mechanical Engineering Technologists and Technicians occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since mechanical engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for mechanical engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Mechanical Engineering Technologists and Technicians occupational group working part-time or full-time earned from **$24,400 to $100,500 a year.** The average salary was **$67,000 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

© Government of Alberta, Human Resources and Employment

Mediator

Produced OCTOBER 2005

Mediators are neutral third parties who assist people involved in disputes to find mutually acceptable resolutions to their conflicts.

NOC Number(s): 1121
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M S

Duties

Mediators use dispute resolution techniques to help disputants (people involved in disputes) to reach mutually satisfactory agreements. Mediators do not decide issues.

In general, mediators:

- facilitate communication between disputants
- help disputants to clarify the issues, identify underlying concerns and develop a better understanding of their respective needs and interests
- help disputants find creative solutions that are acceptable to all parties concerned.

If the disputants are not able to reach an agreement through mediation, they may choose other dispute resolution processes such as arbitration or litigation (for more information, see the Arbitrator and Lawyer occupational profiles).

Mediation has been used to settle many types of conflicts including disputes between:

- neighbours
- spouses
- labour and management
- environmental groups and industrial organizations
- landlords and tenants
- co-workers
- parents and teachers
- business partners
- businesses and their customers (e.g. insurance companies and injured parties)
- businesses and their suppliers.

Using mediation to resolve disputes may be faster and less expensive than going to court. It also allows disputants to:

- keep their arguments private and confidential
- retain control over the outcome of the dispute
- explore a wide range of possible solutions to their differences
- preserve or even improve ongoing business and personal relationships.

Since mediation is a voluntary process, it is best used when:

- there is some ongoing personal connection or interaction between the disputants
- both parties are willing to express personal wants and needs, and are committed to addressing these issues
- there is a commitment to settle using the mediation process
- there is a need to settle the dispute quickly and efficiently.

Working Conditions

Mediators work in a variety of physical environments. They may conduct meetings anywhere and at any time that is acceptable to all parties concerned.

Personal Characteristics

Mediators need the following characteristics:

- patience
- a neutral, unbiased attitude and a keen sense of fair play
- the ability to develop rapport with all kinds of people
- good communication skills including active listening skills and the ability to question effectively and tactfully
- the intellectual ability required to deal with complex factual material, analyze problems and identify and separate the issues involved
- the creativity required to help disputants identify mutually acceptable solutions.

They should enjoy synthesizing information to develop innovative approaches to problems, co-ordinating information, and dealing with people.

Educational Requirements

(section revised FEBRUARY 2006)

Although many mediators have a professional background, there are no specified minimum education requirements. Experience or training in conflict management is strongly recommended.

The Continuing Education or Extension departments of the following post-secondary institutions offer a certificate program in Conflict Management in co-operation with the **Alberta Arbitration and Mediation Society (AAMS)**:

- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Red Deer College**.

The AAMS program requires successful completion of 210 hours (30 days) of training including core and elective courses. Participants must successfully complete competency-based skill assessments in both negotiation and mediation. A two year time frame is recommended for completion of the program. There are no entrance requirements.

The **Legal Education Society of Alberta (LESA)** offers:

- a 40+ hour, hands-on, intensive Mediation of Family and Divorce Conflicts course approved by the **Association for Conflict Resolution**.
- a two and a half day Level I and Level II Mediation of Civil Disputes course
- a four day Interest-Based Negotiation course
- a two day Collaborative Law course.

Mount Royal College in Calgary offers a Conflict Resolution certificate program through Continuing Education. This 220 hour program includes seven required courses and at least five optional courses. One of the two final assessments (Mediation or Negotiation) must be successfully completed. Applicants must be 18 years of age or older.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Alternative Disputes Resolution (ADR) Institute of Canada Inc. offers the designation Chartered Mediator to members who have related training and experience. In Alberta, the Alberta Arbitration and Mediation Society is the regional association of the Institute.

The Alberta Family Mediation Society (AFMS) requires its members to have completed a minimum of 40 hours of Family and Divorce Mediation training. Members usually hold a degree in law, social work or psychology, or have equivalent qualifications. AFMS offers the designation Registered Family Mediator to members who have related training and experience, and conform to its standards of practice.

Employment and Advancement

Usually, mediators work in occupations and contract their services as mediators when they are needed.

When disputants agree to participate in mediation, they must find a mutually acceptable mediator, preferably someone who has training or experience in conflict management. They may obtain lists of trained mediators from organizations such as the Alberta Arbitration and Mediation Society, Alberta Family Mediation Society or ADR Institute of Canada.

Salary

Mediators' fees are negotiated with disputants at the beginning of the mediation process, and **vary greatly.** Sometimes, mediators volunteer their time. Lawyers, social workers, psychologists and other professionals who are also mediators usually charge fees that are in line with their other professional fee structures.

Medical Laboratory Technologist

Produced FEBRUARY 2005

Medical laboratory technologists perform a variety of laboratory tests and procedures to assist physicians in diagnosing, monitoring, treating and preventing disease.

NOC Number(s): 3211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I O**

Duties

In general, medical laboratory technologists:

- examine body fluids and tissues for abnormal chemical levels, cells or bacteria
- prepare tissue for microscopic examination by pathologists
- determine blood type for transfusions
- conduct medical research and analyses
- participate in quality assurance and quality control activities.

Medical laboratory technologists may specialize in the following areas:

- clinical chemistry - the chemical analyses of blood and other body fluids
- clinical microbiology - the culturing and identification of micro-organisms and the determination of antibiotic sensitivities
- hematology - the study of blood cells and their formation in health and disease and the investigation of coagulation factors and disorders
- histotechnology - the preparation of tissue specimens for microscopic examination
- transfusion medicine - the taking and testing of blood to determine its suitability for transfusions and the preparation of blood products
- cytotechnology - a specialized field in medical laboratory that involves the microscopic examination of prepared cellular slides for evidence of abnormality or disease
- molecular genetics.

Working Conditions

Medical laboratory technologists may perform a number of different activities, or they may specialize in a particular area and repeat the same series of tests throughout the day. Those who work with infectious patients and samples or hazardous chemicals must take safety precautions to avoid infection or injury.

Working hours for medical laboratory technologists vary depending on the type of laboratory in which they work. Research laboratories usually operate weekdays only. In diagnostic clinical laboratories, technologists work rotating shifts of days, evenings and nights including weekends and holidays.

Personal Characteristics

Medical laboratory technologists need the following characteristics:

- integrity
- an aptitude for mathematics and science and a keen interest in scientific work
- the ability to do detailed work and maintain a high level of accuracy
- manual dexterity
- good colour and form perception (to study blood cells, etc.)
- good communication and interpersonal skills.

They should enjoy taking a methodical approach to their work, analyzing results and establishing procedures, and using computers and specialized instruments for accurate and precise testing.

Educational Requirements

In Alberta, the following institutions offer medical laboratory programs that are at least two years in length:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Medical Laboratory Technology diploma program. The entrance requirements are a high school diploma with English 30-1, Pure Math 30, Chemistry 30 and Biology 30, or equivalents, and keyboarding skills. Physics 20 is recommended. This is a quota program so higher marks are generally required to gain admission. A personal interview may be required prior to selection and acceptance. NAIT also offers a two year Cytotechnology diploma program. (Note: Students can complete training to become cytotechnologists without becoming registered medical laboratory technologists. However, training in both medical laboratory and cytotechnology provides some job diversification.)
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Medical Laboratory Technology diploma program. The entrance requirements are a high school diploma or equivalent with English 30-1 (or English 30) or English 30-2 (or English 33), Pure Math 10 (or equivalent), Chemistry 20 and Biology 20, and English language proficiency. Applicants must demonstrate a keyboarding/data entry speed of at least 25 words per minute prior to admission to the program.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree program in Medical Laboratory Science. The entrance requirement is one pre-professional year of study with five full university-level courses including courses in English, biology, chemistry and statistics. Candidates then apply to the University of Alberta to complete the second, third and fourth year under the Faculty of Medicine and Dentistry. The third year is spent in practical laboratory training in Capital Health Authority laboratories and Dynacare Kasper Medical Laboratories. Fourth year involves a research project and courses in advanced laboratory techniques. Graduates of this program are eligible to write American as well as Canadian certification exams.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Professions Act and Medical Laboratory Technologists Profession Regulation, registration with the Alberta College of Medical Laboratory Technologists (ACMLT) is mandatory if you meet identified competency requirements and conduct laboratory tests that are used by other registered members to provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College provide restricted activities specified in the Regulation. Only registered members may call themselves Medical Laboratory Technologists. Laboratory workers who are not registered (regulated) may provide pre or post medical laboratory services.

Employment and Advancement

(section revised JANUARY 2006)

Graduates of technical and degree programs are employed in:

- hospital laboratories
- public health departments
- pharmaceutical laboratories
- veterinary research clinics
- agricultural, industrial, government or private laboratories
- post-secondary institutions.

In smaller clinical laboratories, technologists perform general duties in all sections of the laboratory. In most large labs, they may perform general duties or specialize in a particular area.

Advancement opportunities depend on ability and qualifications (experience and education).

Medical laboratory technologists are part of the larger National Occupational Classification 3211: Medical Laboratory Technologists and Pathologists' Assistants. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,200 Albertans are registered medical laboratory technologists. The occupation is expected to grow 2.6 to 3.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Laboratory Technologists and Pathologists' Assistants occupational group working part-time or full-time earned from **$25,200 to $54,800 a year.** The average salary was **$47,200 a year**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Medical Secretary

Produced OCTOBER 2005

Medical secretaries support doctors and other health care professionals by performing a wide variety of clerical and administrative tasks such as scheduling appointments, word processing, bookkeeping/accounting, photocopying, filing and answering telephone calls and correspondence.

NOC Number(s): 1243
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S O d**

Duties

Duties and responsibilities vary from one type of health care organization to another but, in general, medical secretaries:

- answer the telephone, schedule and confirm medical appointments, greet patients and receive and communicate messages
- use health software and other computer applications to book appointments or prepare reports, invoices, financial statements, letters, case histories and medical records
- interview patients to complete intake forms or other documents, or help patients complete health history forms
- complete insurance and other claim forms
- process payments, bank documents and accounts receivable
- set up and maintain records management systems including classifying and coding electronic and hardcopy files
- operate sophisticated office equipment such as voice mail messaging systems and document scanners
- keep examination areas clean, orderly and stocked with supplies
- perform other clerical and administrative functions as required (e.g. order and maintain an inventory of supplies).

In large offices, these duties are divided among several people.

Working Conditions

Medical secretaries work in health care settings. They may work standard office hours or be required to work some evenings and weekends. Much of their shift is spent on their feet and they are routinely required to lift items weighing up to 10 kg. Those who work in hospitals and doctor's offices may regularly be exposed to contagious diseases.

Personal Characteristics

Medical secretaries need the following characteristics:

- the ability to maintain patient confidentiality
- excellent oral and written communication skills
- good organizational and time management skills
- the ability to maintain accuracy while multi-tasking or working under pressure
- a mature attitude toward the human body, wellness and disease processes
- the ability to follow directions closely and accurately
- the ability to establish a professional rapport with and instill confidence in patients
- the ability to deal effectively with the difficult behaviours sometimes exhibited by people in distress
- the ability to work independently or as part of a team.

They should enjoy dealing with people, operating equipment such as computers, and compiling and organizing information.

Educational Requirements

(section revised FEBRUARY 2006)

Most employers require medical secretaries to be able to type at least 50 words per minute with a maximum of three errors, preferably 60 words per minute, and have a related post-secondary certificate or diploma. Knowledge of medical terminology and some medical instruments/tray items is essential.

In Alberta, many colleges, technical institutes and private vocational schools offer secretarial and office administration programs. For a listing, see the Administrative Assistant occupational profile. The following institutions offer programs specifically for administrative assistants in medical offices:

- **Academy of Learning**, a private vocational school in Calgary, Edmonton, High River and Red Deer, offers a 44 week Medical Office Assistant program. The entrance requirements are a high school diploma or equivalent.
- **Alberta Career Computer Center Inc.**, a private vocational school in Edmonton, offers a 26 week Medical Office Administration program. The entrance requirement is a high school diploma with a Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Bow Valley College** in Calgary offers a 22 week Medical Office Assistant program. The entrance requirement is at least three Grade 11 subjects, including English 20 or 23, or a GED and a typing speed of at least 20 words per minute.
- The **CDI College of Business, Technology and Healthcare**, a private vocational school in Calgary and Edmonton, offers a 36 week Medical Administrative Assistant program. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.
- **Columbia College**, a private vocational school in Calgary, offers a 20 week Medical Administration/Clinical Assistant program. The entrance requirement is Grade 12 or equivalent.
- **Grant MacEwan College** in Edmonton offers a one year Medical Secretary program. The entrance requirement is a high school diploma or equivalent. Applicants must successfully complete an English appraisal (or have at least 65 per cent in English Language Arts 30-1 or English 30, or 75 per cent in ELA 30-2 or English 33) and a keyboard entrance test (30 words per minute with no more than six errors).
- **HCC Choice College**, a private vocational school in Spruce Grove, offers a 25 week Medical Clinical Assistant program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Prestwick College** in Calgary offers a 47 week Clinic Office Administrator prgram. The entrance requirement is a high school diploma with Grade 12 English and math, or equivalent.
- **Reeves College**, a private vocational school in Calgary, Edmonton and Lloydminster, offers a 33 week Medical Office Assistant program. The entrance requirement is a high school diploma with a Grade 12 English and math, or equivalent.
- **Slate Training Centre** in Edmonton offers a 34-week Medical Administrative Assistant program. The entrance requirement is a high school diploma with English 30 or 33 or equivalent.
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a five month Health Information Office Assistant certificate. The entrance requirement is a high school diploma with at least 60 per cent in English Language Arts 30-1 or 30-2 and Biology 30, or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Prospective students should investigate the suitability and reputation of training programs with employers before enrolling in a program. For information about related post-secondary programs, see the Unit/Ward Clerk occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Medical secretaries are employed in:

- doctor's offices
- hospitals
- medical clinics and other health care settings
- public and private insurance companies
- health software companies.

In large organizations, experienced medical secretaries may move into supervisory positions.

In Alberta, most people employed in the Medical Secretaries occupational group work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,100 Albertans are employed in the Medical Secretaries occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Secretaries occupational group working part-time or full-time earned from **$12,400 to $51,800 a year.** The average salary was **$25,100 a year.**

Medical Transcriptionist

Produced NOVEMBER 2005

Medical transcriptionists are medical language specialists who interpret and transcribe medical dictation that details patient care during and after an illness or injury.

NOC Number(s): 1244.2
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Medical transcriptionists transcribe documents such as:

- discharge summaries
- history and physical examination reports
- operation reports
- consultation reports
- autopsy reports
- radiology reports
- obstetrical reports
- referral letters.

The medical reports they produce become permanent records of medical, scientific and legal value.

Medical transcriptionists who are employed in medical clinics and offices often have additional office responsibilities such as:

- receiving patients
- scheduling appointments
- answering the telephone
- handling incoming and outgoing mail
- completing and submitting Alberta Health Care Insurance claims
- maintaining patient records.

Working Conditions

Medical transcriptionists work in office environments and spend most of their time sitting in front of computers. Some evening or weekend work may be required.

Some experienced medical transcriptionists work from their homes, providing medical transcription services to regional health authorities and private physicians.

Personal Characteristics

Medical transcriptionists need the following characteristics:

- excellent written communication skills
- an aptitude for languages
- the ability to maintain confidentiality
- the ability to work with little direction and supervision from others
- analytical skills
- a willingness to keep up to date with new medical terminology related to medical and surgical specialties.

Transcriptionists employed in clinics also need good interpersonal skills. Those employed in other types of environments should enjoy working in a quiet environment without a lot of patient contact.

All medical transcriptionists should enjoy work that requires attention to detail.

Educational Requirements

(section revised DECEMBER 2005)

Medical transcriptionists need the following skills and knowledge:

- excellent knowledge of medical terminology
- knowledge of anatomy and physiology, pathophysiology, diagnostic and treatment modalities
- knowledge of medical transcription guidelines and rules of style
- strong word processing skills and experience using transcribing equipment
- proficiency in English grammar and punctuation
- advanced editing and proofreading skills.

Most people entering this field have completed a one year education program that includes a medical terminology course at a recognized post-secondary institution.

- **Bow Valley College** in Calgary offers a one year Medical Transcriptionist certificate program. The entrance requirements are at least 60 per cent in English 30-2 or 30-1 (English 30 or 33) and Biology 30 or successful completion of Grade 12 or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Medical Transcription certificate program. The entrance requirements are a high school diploma with English Language Arts 30-1 or 30-2 (or English 30 or 33) and a typing speed of 30 words per minute. Courses in biology and chemistry are recommended.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a one year Medical Transcriptionist certificate program. The entrance requirement is a high school diploma with at least 60 per cent in ELA 30-1 or 30-2 (or English 30 or 33) and Biology 30. By the end of the first semester of the program (December), students must have achieved a typing speed of 40 words per minute in a five minute timing with no more than five errors.

Related programs of study such as Health Information Management, Medical Secretary and Medical Office Assistant programs are offered by post-secondary institutions throughout the province (for more information, see the Health Information Management Professional and Medical Secretary occupational profiles). Programs vary in content, length, admission requirements and cost. Prospective students should thoroughly investigate a program and its reputation with employers before enrolling.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most medical transcriptionists are employed in settings where large numbers of physician-dictated patient reports are transcibed:

- hospitals
- medical research facilities
- medical laboratories
- diagnostic imaging centres.

Others are employed in:

- clinics
- physicians' offices
- coroner or medical examiner offices
- university medical schools
- medical insurance companies
- government agencies (e.g. Workers' Compensation Board)
- medical transcription companies.

Some self-employed medical transcriptionists provide transcription services on a contract basis.

Experienced transcriptionists may advance to supervisory positions in hospitals and other health care facilities where there are a number of transcriptionists employed.

Medical transcriptionists are part of the larger National Occupational Classification 1244: Court Recorders and Medical Transcriptionists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Court Recorders and Medical Transcriptionists occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since medical transcriptionists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for medical transcriptionists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary according to responsibilities and experience, and according to salary scales established through union contracts.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Transcriptionists occupational group working part-time or full-time earned from **$18,300 to $56,900 a year.** The average salary was **$34,400 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Mental Health Worker

Produced JUNE 2005

Mental health workers help people deal with personal and social problems by teaching related skills and providing information and support.

NOC Number(s): 4212
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M I

Duties

Mental health workers work with a variety of clients on an individual basis or in groups. Duties vary considerably from one job to another but, in general, mental health workers:

- develop, organize and facilitate the delivery of mental health promotion and prevention programs
- assess client needs, identify problems and work with interdisciplinary teams to devise and implement treatment plans
- work closely with clients' families, physicians, psychiatrists, psychologists and other health providers
- act as advocates for clients and co-ordinate required services
- provide early intervention and appropriate referral services
- provide support for clients and their families
- help clients develop skills and strategies for dealing with their problems
- help clients manage medications
- maintain confidential records of client progress
- provide links between mental health services and culturally relevant programs and services
- address mental health issues in the community as a whole
- keep up to date with new developments in their field by reading professional literature, attending courses and seminars, and establishing and maintaining contact with other social agencies.

Working Conditions

Mental health workers may work a standard work week in an office environment or work shifts including evenings and weekends.

This work can be stressful and demands emotional maturity. Mental health workers may have to deal with incidents of aggression or behavioural problems.

Personal Characteristics

Mental health workers need the following characteristics:

- good verbal and written communication skills including the ability to listen non-judgementally and with empathy and understanding
- emotional maturity and good judgement
- problem solving skills
- decision making skills
- genuine interest in helping people resolve their problems
- interest in taking a multidisciplinary, cultural, holistic approach to mental health
- interest in exploring cultural diversity and poverty issues that impact mental health
- the ability to keep contacts with clients on a professional level
- creative ability to develop new programs or ways of doing things.

They should enjoy helping others, compiling information and maintaining contact with other agencies, and developing innovative approaches to problems.

Educational Requirements

Mental health workers' academic qualifications vary greatly. Most mental health workers have **post-secondary education** in a discipline related to mental health such as nursing, psychology, social work, occupational therapy or recreation therapy. They may be required to be registered, certified or accredited by their particular professional associations before they may work in the mental health field.

Related programs are offered by post-secondary institutions throughout Alberta. For more information, see the appropriate occupational profiles (e.g. Addictions Counsellor, Registered Nurse, Psychiatric Nurse, Psychologist, Social Worker, Occupational Therapist, Recreation Therapist). Cultural awareness and the ability to communicate in languages other than English, including First Nations languages, are definite assets.

Grant MacEwan College in Edmonton offers a two year Mental Health diploma program that is designed for people interested in doing community resource work in Aboriginal communities. The entrance requirements are a high school diploma with English 30-1 (or English 30, at least 75 per cent in English 30-2 or English 33, or successful completion of an exam). Accepted applicants are required to complete a criminal record check.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Mental health workers are employed in:

- correctional facilities
- health care and rehabilitation clinics and hospitals
- social service agencies
- family and community services
- private practices
- counselling centres
- healing and wellness centres
- educational institutions.

They may work in urban or rural settings.

Advancement opportunities depend on the size and nature of the employing organization and the mental health worker's qualifications.

Mental health workers are part of the larger National Occupational Classification 4212: Community and Social Service Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,600 Albertans are employed in the Community and Social Service Workers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since mental health workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for mental health workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for mental health workers vary considerably depending on job location, type of employer, position responsibilities and worker qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Community and Social Service Workers occupational group working part-time or full-time earned from **$14,100 to $104,900 a year**. The average salary was **$27,800 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Messenger/Courier

Produced SEPTEMBER 2002

Messengers sort, collect and deliver letters, telegrams, packages or messages; run errands; distribute office supplies and perform similar routine duties.

NOC Number(s): 1463
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M o s**

Duties

Government messengers have regularly scheduled duties such as delivering incoming and outgoing mail and office communications, running postal meters, checking for incoming dispatches and occasionally making special trips for managers. They may also be responsible for maintaining and delivering office supplies, filing, sorting materials and doing other odd jobs.

Messengers employed in large businesses have much the same duties as those in government. They may operate postage meters, envelope sealers or simple duplicating machines, or may be in charge of a stockroom. **Bank messengers** collect and deliver cheques, securities, mail and other items.

Couriers are employed by delivery businesses providing letter and package pickup and delivery services on short notice and pre-scheduled runs. They generally operate vehicles, ranging from small cars and vans to three-ton trucks. Some messengers in congested urban areas walk or use bicycles in the downtown core area.

Working Conditions

Messengers and couriers generally use pagers, radio dispatch or cellular communication systems to keep in touch with dispatchers. They may be required to lift packages weighing over 25 kilograms. Those who travel outdoors work in all kinds of weather.

Most office messengers work regular office hours, but some commercial companies require messengers to work shifts. Couriers who are owner/operators sometimes work twelve-hour days.

Personal Characteristics

Many messengers and couriers have chosen this type of work because they value working with little direction and supervision from others, some variety in tasks and the opportunity for contact with people. Since they are not under constant supervision, messengers must be conscientious and responsible. They may also have to be "bondable" (acceptable to an insurance company as a law-abiding, responsible person).

Educational Requirements

There are no minimum education requirements in this occupation, but a high school diploma with business courses is a definite advantage when applying for promotions.

Messengers and couriers who operate vehicles must have a valid driver's licence. Couriers should have a good knowledge of the city in which they wish to work and, if they are hired on contract, must own a dependable vehicle. Contractors may be required to pay for the required insurance and cargo bond licensing.

Employment and Advancement

(section revised JANUARY 2006)

Messengers and couriers are employed by large businesses, governments and private courier companies.

Couriers may be employees or self-employed contract workers. Where couriers work on a contract basis, the company may provide the radio, uniforms and documents. Other courier companies provide vehicles and pay an hourly wage.

Opportunities for advancement are limited without further education.

In Alberta, over 75 per cent of people employed as messengers/couriers work in the following industries:

- **Transportation and Warehousing**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 5,000 Albertans are employed in the Couriers, Messengers and Door-to-Door Distributors occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since messengers/couriers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for messengers/couriers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Wages for messengers and couriers vary a great deal, depending on the volume and nature of service. Self-employed couriers who own their own vehicles may earn considerably more, but must pay their own business expenses and often work long hours.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Couriers, Messengers and Door-to-Door Distributors occupational group ranged from **$14,300 to $35,700 a year.** After three years, salaries ranged from **$23,500 to $48,600 a year.** The average salary was **$32,200 a year**.

Meteorologist

Produced OCTOBER 2005

Meteorologists study the physics, chemistry and dynamics of the atmosphere and its interaction with land and water surfaces, weather, climate, climate change and their effect on people's health and safety, the economy and the earth's ecosystems.

NOC Number(s): 2114
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

In general, meteorologists may be involved in:

- weather forecasting
- providing consulting services regarding weather and climate, air quality, sea and lake ice, or hydrology (for more information, see the Hydrologist occupational profile)
- conducting research and developing models
- applying meteorological knowledge to problems in agriculture, forestry, air pollution, water management, energy, hydrometeorology (water in the atmosphere), transportation, national defense or the arctic environment
- supporting management activities through business planning, policy development and performance measurement.

Meteorologists may work as applied meteorologists, climatologists, research meteorologists, instrumentation specialists or weather broadcasters.

- **Applied meteorologists** provide analyses, forecasts, warnings and advice tailored to the requirements of a business, a governmental organization, or an industry (e.g. transportation, energy, agriculture, forestry, recreation).
- **Climatologists** study weather records gathered over long periods of time and conduct numerical simulations of climate conditions to understand and predict global changes and long-term or seasonal weather patterns for specific regions, and anticipate the impact of climate change and adaptation strategies.
- **Research meteorologists** study the dynamic, physical or chemical processes of the atmosphere and its interaction with land and ocean surfaces. They may study small-scale phenomena (e.g. clouds, the electrical and chemical properties of the atmosphere), large-scale phenomena (e.g. transport of air pollutants, hurricanes) or be involved in developing mathematical simulation models for weather and climate prediction.
- **Instrumentation specialists** develop instruments and systems to measure and record weather variables.
- **Weather broadcasters** provide weather forecasts and other weather information to the public via television, radio and the Internet.

Working Conditions

Most meteorologists are stationed in urban centres and work in an office setting.

Applied meteorologists at weather centres often work rotating shifts that include night shifts and sometimes work alone.

Weather broadcasters often work evening shifts and may work long hours during weather-related emergencies.

Personal Characteristics

Meteorologists need the ability to:

- communicate effectively in person and in writing
- think conceptually in multiple dimensions
- apply theoretical concepts and analyze large volumes of information

- make decisions under the pressure of fixed deadlines and varying workload
- work alone or as part of a team.

They should enjoy co-ordinating and conducting research, using instruments and equipment to perform tasks requiring precision, and working with people.

Educational Requirements

The minimum education requirement is a Bachelor of Science (B.Sc.) degree in atmospheric sciences. However, most routine forecast production work has been automated and employment prospects are best for meteorologists who have master's or doctoral degrees as well as computer skills, communication skills and marketing skills. They must be able to plan and carry out investigations, develop and test theories and models, and prepare papers and reports.

In general, the entrance requirement for a master's degree program in meteorology or atmospheric sciences is a B.Sc. in mathematics, physics, chemistry, meteorology or atmospheric science with a minimum specified average in the last two years of study. Universities and university colleges located throughout Alberta offer B.Sc. degree programs in mathematics, physics and chemistry.

The **University of Alberta** in Edmonton offers a four year B.Sc. degree program specifically in atmospheric sciences. The entrance requirement is a competitive average (65 to 80 per cent) in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Physics 30, Chemistry 30 and one other approved Grade 12 subject. The University of Alberta also offers master's and doctoral (PhD) degree programs in atmospheric sciences.

Outside of Alberta, the following institutions offer master's and doctoral degree programs atmospheric sciences/meteorology:

- Dalhousie University in Halifax
- McGill University in Montreal
- University of British Columbia in Vancouver
- University of Quebec at Montreal (instruction in French)
- University of Toronto
- University of Victoria
- York University in Toronto

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the insitution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Canadian Meteorological and Oceanographic Society endorses weather broadcasters who apply for endorsement and meet qualification criteria.

Employment and Advancement

The **Meteorological Service of Canada**, part of Environment Canada, has been and still is the largest employer of meteorologists in Canada. However, a growing number of meteorologists are employed in the private sector, providing value added and specialist meteorological products and services (e.g. related to road conditions, offshore oil and gas operations, forest fire services, wind and solar energy).

The number of meteorologists employed by Environment Canada is expected to remain constant. Normal employee turnover will probably create 30 to 35 job openings each year. Meteorologists also are employed by:

- private meteorology firms
- environmental consulting firms
- companies in the transportation and energy sectors.

There are a few broadcast meteorologists in Alberta. For related information, see the Announcer and Reporter occupational profiles.

Meteorologists who have doctoral degrees may be employed as instructors and researchers at universities.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Meteorologists occupational group working part-time or full-time earned from **$41,300 to $83,200 a year.** The average salary was **$67,400 a year.**

Microbiologist

Produced SEPTEMBER 2005

Microbiologists study the growth and characteristics of micro-organisms (viruses, bacteria, fungi, parasites) and their interactions with their environment, and develop medical and industrial applications (for example, in the food processing industry).

NOC Number(s): 2121.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Microbiologists study the biochemical, physiological and genetic aspects of micro-organisms, and how micro-organisms interact. In general, this involves:

- working in or creating aseptic conditions
- studying human diseases caused by micro-organisms
- conducting experiments to isolate and grow cultures of specific micro-organisms under controlled conditions
- isolating, analyzing and genetically manipulating nucleic acids, proteins and other substances produced by micro-organisms
- performing tests on water, food and the environment to detect harmful micro-organisms and control sources of pollution and contamination
- observing, identifying and classifying micro-organisms
- isolating and genetically modifying micro-organisms involved in breaking down pollutants
- developing genetically modified microbes for use in the production of genetically engineered biological products (proteins) or for gene transfer.

Microbiologists use a variety of specialized equipment such as gas chromatographs and high pressure liquid chromatographs, electrophoresis units, thermocyclers, fluorescence activated cell sorters and phosphoimagers.

Microbiologists may specialize in fields such as:

- bacteriology, conducting research into the characteristics of bacteria or a particular aspect of bacteriology such as public health bacteriology
- pharmaceutical bacteriology, hospital (clinical) bacteriology, environmental microbiology, food microbiology or biotechnology
- immunology, studying immune reactions in humans or animals
- molecular microbiology, investigating how bacteria or viruses function at the molecular level
- eukaroytic microbiology, studying fungi, parasites or protozoa
- virology, studying viruses.

Medical microbiologists help scientists and physicians in the diagnosis, prevention and treatment of infections in animals and humans by investigating:

- how organisms cause disease and their role in disease processes
- factors contributing to the occurrence of disease in a population
- how epidemics can be controlled.

Microbiologists employed in industry may be involved in quality control and the application of good laboratory practice or good manufacturing practice.

Work in microbiology is often interdisciplinary so microbiologists may work closely with chemists, biochemists, geneticists, pathologists, physicians, environmental scientists, engineers, veterinarians or geologists.

Working Conditions

Some microbiologists, particularly those working in environmental, agricultural and veterinary fields, work outdoors some of the time. However, most of the work is indoors in laboratories and on computers. The pressure of having to meet project deadlines can be stressful.

Following safety rules is extremely important to avoid chemical injury and exposure to infection when working with pathogens. Preventive inoculations help to protect medical microbiologists from the risk of disease.

Personal Characteristics

Microbiologists need the following characteristics:

- an inquiring mind and a wide interest in natural phenomena
- good communication skills
- manual dexterity (for transferring micro-organisms from one culture medium to another without contaminating samples, and for mounting and staining specimens)
- patience
- the ability to pay attention to detail
- a strong interest and aptitude for chemistry, biochemistry and genetics.

They should enjoy synthesizing information to find innovative solutions to problems, working with instruments and equipment at tasks which require precision, and directing the work of others.

Educational Requirements

The minimum education requirement is a four year bachelor of science degree in microbiology, biochemistry or genetics with some background in chemistry. Those who have a bachelor's degree are qualified to work as laboratory assistants or technicians. A master's degree or PhD is usually required for senior research positions. Those who have PhDs may continue their training as post-doctoral fellows.

Medical microbiologists preparing to work in hospitals usually take a medical degree, then specialize in microbiology or pathology (for more information, see the Physician and Pathologist occupational profiles). Those planning to work in medical research laboratories or medical diagnostic laboratories may take a B.Sc. degree in Medical Laboratory Science, or a B.Sc. degree plus a related two year diploma. For some positions, other forms of certification also may be required.

Admission to graduate degree programs generally requires an acceptable average in the last two years of a related bachelor's degree program. Post-secondary institutions throughout Alberta offer bachelor's degree programs in biological sciences and university transfer programs that allow students to apply up to two years of study toward bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

The following post-secondary institutions offer graduate degree programs as well as bachelor's degree programs that include courses in microbiology:

- The **University of Alberta** in Edmonton offers a four year B.Sc. degree program in microbiology that is also offered as a co-operative education program. The University also offers M.Sc. and PhD degree programs in cell biotechnology and microbiology, and medical microbiology and immunology.
- The **University of Calgary** offers B.Sc., M.Sc. and PhD degree programs in cellular, molecular and microbial biology in the Department of Biological Sciences. The Faculty of Medicine offers a Bachelor of Health Sciences degree program with a specialization in biomedical science. The Department of Biochemistry and Molecular Biology offers M.Sc. and PhD programs.
- The **University of Lethbridge** offers a four year B.Sc. degree program in agricultural biotechnology that is also offered as a co-operative education program. The university also offers a M.Sc. degree program in which the primary emphasis may be microbiology.

Entrance requirements for bachelor's degree programs vary from one program to another but, in general, include a high school diploma with a competitive average (ranging from 65 to 80 per cent) in English Language Arts 30-1, Pure Math 30, Biology 30, Chemistry 30 and one other approved 30-level subject (Physics 30 and Math 31 recommended).

For information about mature student admission policies and entrance requirements for specific programs, please check post-secondary calendars or websites.

Other Requirements

Professional Biologist is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Professional Biologist, you must be a registered member of the Alberta Society of Professional Biologists (ASPB). You do **not** have to be registered with ASPB if you do not call yourself a Professional Biologist.

Employment and Advancement

(section revised JANUARY 2006)

Microbiologists who have B.Sc. degrees may work as technologists in post-secondary, government or industrial laboratories. Those who have M.Sc. degrees may work as professionals in the same laboratory settings. Microbiologists who have PhDs may conduct research, teach in universities, manage hospital (clinical) diagnostic microbiology laboratories or advance to senior scientific appointments in government or industry.

Microbiologists work for the following types of organizations:

- municipal, provincial and federal governments
- hospitals, colleges and universities
- laboratories in the food processing industry
- companies in the agricultural industry
- pharmaceutical companies
- diagnostic laboratories
- biotechnology firms
- bioremediation companies
- companies in the oil industry.

Contract work is becoming more common in this occupation. Advancement opportunities depend on the size and nature of the employing organization and the microbiologist's qualifications.

Microbiologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since microbiologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for microbiologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Microbiologists' salaries vary considerably depending on their responsibilities and qualifications (for example, whether they have a B.Sc. degree and are working as technicians or have a PhD degree and are conducting research).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists and Related Scientists occupational group working part-time or full-time earned from **$17,000 to $99,400 a year.** The average salary was **$64,600 a year.**

Midwife

Produced JANUARY 2005

Midwives are primary health care profesionals who provide continuity of care for women and babies throughout pregnancy, birth and six weeks after birth.

NOC Number(s): 3232.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

In general, midwives:

- educate women about pregnancy, labour, delivery and the post-partum period, and encourage them to make their own health care decisions
- examine women during pregnancy and assess their physical and psychological well-being
- identify potentially abnormal conditions during pregnancy and advise clients about alternative care options
- consult or refer clients to other health care professionals in the event of potentially abnormal conditions and/or according to client wishes
- counsel and educate women concerning diet, exercise and other pre-natal health practices
- monitor the condition of the mother and baby during labour
- use hands-on skills to assist women in birthing babies
- provide emotional support to clients and their families during labour, birth and the post-partum period
- administer emergency measures and arrange for immediate contact with physicians when abnormal conditions arise
- examine and care for newborn infants
- educate clients about breast feeding, infant care, and newborn growth and development
- visit clients during the post-natal period at home or in hospital, instruct clients in how to care for themselves and their babies and provide ongoing support
- prescribe and fit birth control devices
- counsel individuals and conduct classes about pregnancy and childbirth, parenthood, family planning and other related topics
- maintain records and write reports.

Working Conditions

Midwives work in clients' homes and in clinics, hospitals and birth centres. They may be required to stand, kneel, bend or squat for long periods of time. Some lifting (up to 25 kilograms) is required.

Midwives may be on call 24 hours a day and work long, unpredictable hours. Some midwives work together so no one person has to be on call all of the time.

Midwives must have reliable vehicles and the equipment required to practice midwifery.

Personal Characteristics

Midwives need the following characteristics:

- a genuine concern for people and the ability to accept them as they are
- good health, stamina and energy
- flexibility
- the maturity and emotional stability required to instill confidence and deal with emergency situations

- good organizational skills.

They should enjoy counselling and educating women and their families.

Educational Requirements

In Alberta, regulations and competencies for the practice of midwifery were established in 1994. The Midwifery Regulations Advisory Committee (MRAC) has established a framework for registering midwives and regulating midwifery practice.

Many of the midwives currently practising in Alberta have taken their training in other countries or have taken distance education courses and apprenticed with practising midwives. On an ongoing basis, they take further education courses such as neonatal resuscitation and Red Cross basic resuscitation workshops.

In Ontario, **McMaster University**, **Ryerson University** and **Laurentian University** jointly offer a four year Bachelor of Health Sciences (BHSc) degree program in midwifery. Students with previous university courses or other academic experience may be eligible for transfer or challenge credit for non-clinical courses. Approximately half of the program is spent in clinical placements with qualified midwives. Students wishing part-time study must be enrolled at Ryerson University and may take up to seven years to complete the program.

There are two stages in the application process for the BHSc degree program in midwifery:

1. Submission of a completed General University Application form. The form and submission instructions are on the **Ontario Universities' Applications Centre** website.
2. Submission of an application for the Midwifery Education Programme to **one** of the three universities. Forms and instructions are on university websites.

Overall enrollment in the program is limited to 35 to 45 students a year and the application process is highly competitive. The minimum entrance requirement is a high school diploma or equivalent with at least 70 per cent in English, a social science, and biology or chemistry.

Other Requirements

(section revised FEBRUARY 2005)

Midwife is a protected title under Alberta's Health Disciplines Act and Midwifery Regulation. To call yourself a Midwife or practice as a Midwife, you must be registered by the Midwifery Health Disciplines Committee. Registered members provide health services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Midwives have hospital privileges in the Calgary Health Region, Peter Thompson Health Region and Westview Health Region, and negotiations are underway in other health regions. Midwifery is not currently funded by the health care system in Alberta.

In Alberta, midwives are self-employed. Until they achieve a recognized place in the health care system, no advancement opportunities are available to them.

Midwives are part of the larger National Occupational Classification 3232: Midwives and Practitioners of Natural Healing. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 500 Albertans are employed in the Midwives and Practitioners of Natural Healing occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since midwives form only about 5 per cent of the larger occupational group on which this forecast is based, only one new midwife position is likely to be created every two years.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Midwives are independent practitioners. The average annual income for midwives who work full time in Alberta is about **$60,000 per year after expenses (2005 estimate).**

Millwright

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and mechanical equipment in factories, production plants and recreational facilities.

NOC Number(s): 7311
Minimum Education: Apprenticeship Trade - Grade 11
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Duties vary from one position to another but, in general, millwrights:

- read diagrams and schematic drawings to determine work procedures
- operate rig equipment and dollies to move heavy machinery and parts
- fit bearings, align gears and shafts, attach motors, and connect couplings and belts (often to within a fraction of a millimetre tolerance)
- align and test equipment and make adjustments
- perform preventive and operational maintenance using procedures such as vibration analysis, and repair or replace defective parts
- trouble-shoot hydraulic, pneumatic and programmable logic controls
- may do some tack welding and fabrication as well as maintain an inventory of replacement parts.

Millwrights may do primarily construction work, plant maintenance work or a combination of both. They often work in close association with other trades people such as machinists, instrument mechanics, welders, electricians and pipefitters.

Working Conditions

Working conditions for millwrights vary from one job to another. On construction job sites, they are exposed to a variety of weather conditions. In plant maintenance, they may work indoors and outdoors. Hours of work vary: shift work and some overtime may be required. The work environment may be noisy and there may be some risk of injury when working with heavy machinery.

Millwrights may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Millwrights need the following characteristics:

- physical strength and stamina
- good co-ordination and manual dexterity
- the ability to visualize a layout by looking at plans and blueprints
- the ability to comprehend and trouble-shoot mechanical systems
- the ability to get along with and sometimes supervise the work of others
- the ability to keep up to date with changing technology.

They should enjoy doing precision work.

Educational Requirements

To work in Alberta, millwrights must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified

journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:
- have at least an Alberta Grade 11 education with Math 20 or 23, Applied Math 20 or Pure Math 20, English 20 or 24, and Science 20 or 24, Biology 20, Chemistry 20 or Physics 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Courses in applied math and physics are particularly important.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Millwright apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:
- Keyano College in Fort McMurray
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Grande Prairie
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

NAIT also offers technical training by distance delivery.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Machinists are employed by manufacturing, processing and construction companies as well as amusement parks and ski hills. Those employed in construction may experience periods of unemployment.

Millwrights can advance to supervisory or superintendent positions. Alberta certified journeyman millwrights who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Millwrights are part of the larger National Occupational Classification 7311: Construction Millwrights and Industrial Mechanics (Except Textile). In Alberta, over 75 per cent of people employed in this classification work in the following industries:
- **Oil and Gas Extraction**
- **Construction**
- **Wood Products Manufacturing**
- **Other Manufacturing**
- **Food and Beverage Products Manufacturing**
- **Mineral Products Manufacturing**
- **Petrochemicals, Rubber, Plastics and Chemicals Manfacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:
- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 7,950 Albertans are employed in the Construction Millwrights and Industrial Mechanics (Except Textile) occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 240 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since millwrights form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for millwrights.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice millwrights earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$18 to $25 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans employed as millwrights working part-time or full-time earned from **$22,900 to $73,600 a year.** The average salary was **$57,200 a year.**

Mining Engineer

Produced JULY 2004

Mining engineers develop and apply methods of locating, extracting and preparing minerals to be used in manufacturing and energy industries.

NOC Number(s): 2143
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

In general, mining engineers may:

- conduct surveys of mineral deposits to determine the size of ore deposits and their orientation and mineral content
- prepare estimates of the costs involved in developing and operating mines
- select the most suitable means of extracting ore
- develop plans for the location and construction of mine shafts, tunnels and rooms
- ensure that proper drilling and blasting techniques are used
- select the most efficient and economical materials-handling equipment to transport ore, waste materials and mineral products
- plan underground and open-pit layouts, waste disposal dumps, haulage routes and methods, mine ventilation systems and drainage systems
- develop computer applications for use in various phases of mine operation
- co-ordinate the work of technologists, technicians and surveyors
- oversee the day-to-day operations of mines (work as pit foremen)
- supervise and train mine workers with a special emphasis on safety issues.

Mining engineers generally work in one of three fields:

- mine development
- engineering and design
- mine production and management.

Specialty areas include:

- mine operations and safety
- ventilation
- power and water supply
- communications
- equipment maintenance
- mining venture analysis
- mine reclamation and environment.

Working Conditions

Mining engineers work in offices and laboratories, and at mine sites. At mine sites, they must wear protective equipment such as safety boots, gloves, hard hats, glasses and hearing protection. They may work in enclosed spaces (e.g. underground mine shafts) or high places (e.g. near the edges of open pit mines).

Mining engineers must fly in and out to work at mines that are in remote locations.

Personal Characteristics

Mining engineers need the following characteristics:

- excellent communication and interpersonal skills
- an aptitude for mathematics and science (especially chemistry and physics)
- the ability to visualize three-dimensional objects from two-dimensional drawings
- the ability to be decisive
- the adaptability required to apply themselves to a variety of work situations.

They should enjoy being innovative, doing work that requires precision, making decisions and supervising others.

Educational Requirements

The minimum academic qualification for mining engineers is **a bachelor's degree in mining engineering.** Doctoral degrees are required for teaching and research positions.

In Alberta, the **University of Alberta** in Edmonton offers a four year bachelor's degree program and graduate degree (M.Eng., MSc, PhD) programs. The admission requirement for the bachelor's degree program is a high school diploma with an average of at least 80 per cent in:

- English 30
- Chemistry 30
- Pure Math 30
- Math 31
- Physics 30.

This is a quota program so higher marks may be required to gain admission.

The University of Alberta also offers a co-operative program in mining engineering that consists of periods of academic study alternating with periods of planned work experience in industry. This option is offered to students who have a grade point average (GPA) of 2.7/4 or better after their first year. Students in the co-operative program usually take five years to complete the requirements of the degree.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Mining engineers usually work where mineral deposits are located, often near small, isolated communities. Those engaged in research, management, consulting or sales may work in urban areas, although it is recommended that they acquire field experience first. Many Canadian mining engineers are employed in other countries.

Mining engineers are employed by:

- mining, metal, non-metal, coal and oil sands extraction companies
- consulting companies
- engineering contractors
- provincial or federal governments
- equipment manufacturers.

Experienced mining engineers may set up their own consulting businesses. Teaching and research are options open to experienced mining engineers who have graduate degrees.

In Alberta, most people employed as mining engineers work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Mining Engineers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

In 2003, Albertans working in the Mining Engineers occupational group earned an average salary of **$61,300 a year** (2003 Alberta Wage and Salary Survey).

© Government of Alberta, Human Resources and Employment

Model

Produced APRIL 2005

Models enhance and promote the sale of consumer goods, new fashion designs and other business products and services.

NOC Number(s): 5232.4
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M I

Duties

Models display clothing and merchandise to audiences through fashion shows, photographs, videos and personal appearances. There are three basic types of modelling: runway, print and television.

- **Runway or ramp modelling** involves promoting retail and wholesale clothing lines at local fashion shows and highlighting fashion designers' newest styles and accessories at international fashion shows. On stage, fashion models show off clothes and demonstrate how they can be co-ordinated with accessories. Usually, models have to make many quick changes backstage while maintaining their poise in front of audiences.
- **Print modelling** involves posing for magazine and newspaper advertisements, catalogues, brochures, editorial features, billboards, flyers and product point-of-purchase displays. Stylists usually assist models in preparing for photo sessions (helping with hair and make-up) and clothing selection. Models in print modelling must be able to adopt the look the photographer wants.
- **Film and television modelling** usually requires some acting ability. Spokesmodels promote products and services for commercials on television, film or videos. They work with production directors who give them their lines and explain the scene.

Some models specialize in a particular type of modelling but versatility is a definite advantage when looking for work. For example, models should be able to work as both runway and print models.

Some models specialize in particular fashion categories such as plus sizes or fashions for older people.

Working Conditions

Models work in a wide variety of settings and their hours of work vary considerably. Local fashion shows may be held in tea rooms, shopping malls or banquet rooms, or on outdoor stages. Photo sessions may be in studios or on location (sometimes outside). Commercials are usually shot in studios but may be shot on location. Some commercials take up to five days to shoot.

Modelling is an extremely competitive field. Models must be ready to take calls on short notice so daily personal grooming and wardrobe organization are essential. Work tends to be seasonal, busiest in the fall and spring. Local modelling tends to be more lenient so models may work longer than in international modelling.

Personal Characteristics

Modelling is open to men, women and children of all ages. Although appearance is important, the desired look is constantly changing. The basic requirement is that models meet minimum height requirements and are well-proportioned. Specific age and physical requirements vary depending on the market and type of modelling. International models must be within a specified height range (generally five feet eight inches to five feet eleven inches for women, five feet eleven inches to six feet two inches for men) and fit sizes set by designers (generally size two to four for women, 40 Regular to 42 Tall for men). Female plus size models in the international market usually wear size 10 to 12 and must fit designer sample sizes.

Models also need the following characteristics:

- a positive attitude and the ability to persevere in a highly competitive field

- a desire to provide prompt, professional, friendly service
- grace and poise
- flexibility and the ability to adapt quickly to different requirements
- the ability to work under the pressure of deadlines
- confidence in front of the public and in promoting themselves to find work
- excellent personal grooming habits.

Models should enjoy posing and modelling, and working with people from a wide range of backgrounds.

Educational Requirements

Most successful models have not had formal training in modelling. They have been discovered by modelling agents who provide advice and promote their services.

Modelling agencies are always scouting, looking for new talent. Prospective models may submit photographs or attend agency open calls to obtain free assessments of their potential.

Before contacting modelling agencies, prospective models should learn as much as possible about each agency and how the agency recruits models. Agencies generally expect models to pay for promotional expenses such as photographs, composite cards, website promotion and courier costs. Agencies may prefer to use their own photographers for test shots.

There are **no minimum education requirements** but employers generally prefer to hire high school graduates and encourage young people to finish high school. Courses in visual arts, drama, physical education, cosmetology and financial management are recommended. At the very least, models must be able to read contracts and keep track of their bookings and expense receipts.

A number of modelling agencies offer training programs for prospective models. Before signing up for a program, aspiring models should check the reputation of the agency and the content of the training program.

Employment and Advancement

Models are self-employed. They usually pay a commission for each job their agency books for them. Commission rates vary from market to market. Models may have many agents internationally but only one agent per market.

In smaller centres, modelling is a part-time occupation for most models. They are often students as well. In larger markets, models may be busy full time. The most work is in print modelling for catalogues, newspapers, magazines, brochures and lifestyle materials. Very few models make it to the international modelling scene in New York, Los Angeles, Tokyo or Europe.

Salary

Pay rates for models **vary considerably** depending on the market and the type of modelling. In smaller centres, models may start out by doing free shows for local charities or working in exchange for products or goods. In Toronto, Montreal and Vancouver, established models may earn from **$900 to $3,000 per day (2005 estimate)**. Well established models in international markets earn more. Income earned abroad is taxed by the country in which it is earned.

Since models are self-employed, they must pay all of their business expenses (e.g. agents' commissions, travel expenses, make-up) from their earnings. Most modelling agencies in Canada charge a commission of 15 to 20 per cent.

Mortgage Agent

Produced FEBRUARY 2005

Mortgage agents help clients locate funding for mortgage financing and find the best rates, and provide advice regarding the best approaches to take with lenders.

NOC Number(s): 1232
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Mortgage agents represent their clients and recommend the mortgage products and services that will best serve clients' needs. They may act as independent representatives of a number of financial institutions.

Duties vary but, in general, mortgage agents:

- analyse borrowers' financial needs
- research mortgage financing options to determine which ones might satisfy those needs
- explain the terms and conditions of each mortgage option (e.g. interest rate, payment schedule, lump sum payment opportunities), compare options and make recommendations
- present proposals for financing to lenders in the best way possible to obtain mortgage financing
- ensure that clients receive timely responses to mortgage applications.

Mortgage agents also spend a considerable amount of time networking with real estate agents and other business contacts to identify potential new clients and build their businesses.

Working Conditions

Working conditions for mortgage agents vary. They may work in a typical office environment or work from their homes, and spend a lot of time meeting people. Evening and weekend work is required.

Personal Characteristics

Mortgage agents and brokers need the following characteristics:

- integrity and honesty
- good interpersonal skills
- strong organizational skills
- accuracy and precision in dealing with figures
- good oral and written communication skills.

They should enjoy taking a methodical approach to compiling information for mortgage documents, talking to people and evaluating mortgage applications.

Educational Requirements

In Alberta, mortgage agents must have a high school diploma and successfully complete the Mortgage Agents Program.

The Alberta Mortgage Brokers Association's 75 hour Mortgage Agents Program may be taken by independent study through the **Alberta Real Estate Association (AREA)** or by classroom instruction. Classroom instruction is offered by **Mount Royal College** in Calgary and the **Real Estate Training Institute** in Edmonton. The entrance requirement is a high school diploma. Computer skills are a definite asset.

The **Canadian Institute of Mortgage Brokers and Lenders (CIMBL)** offers a voluntary designation, Accredited Mortgage Professional (AMP), to its members who have:

1. completed a recognized program such as the AREA program, successfully challenged a CIMBL exam or completed CIMBL's Ethical Practice seminar.
2. completed CIMBL's Ethical Practice seminar.
3. at least two years of experience in the mortgage industry as a broker, lender or insurer.

Other Requirements

In Alberta, mortgage agents and brokers must be licensed by the **Real Estate Council of Alberta (RECA).** Applicants must pass a provincial exam and satisfy continuing education requirements.

Employment and Advancement

(section revised JANUARY 2006)

Mortgage agents may be employed by or associated with private mortgage brokerage firms or real estate offices.

Licensing as a mortgage broker requires two years of experience as a mortgage agent. Further advancement generally takes the form of building a larger client base.

Mortgage agents and brokers are part of the larger National Occupational Classification 1232: Loan Officers. Over 75 per cent of people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,550 Albertans are employed in the Loan Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since mortgage agents and brokers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for mortgage agents and brokers. However, mortgage agent is a growing component of this classification.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Mortgage agents' incomes vary considerably from one month to another and from one agent to another. For each mortgage they sell, they receive a percentage of a commission paid by the lender.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Loan Officers occupational group working part-time or full-time earned from **$19,600 to $60,600 a year.** The average salary was **$40,300 a year.**

Motorcycle Mechanic

Produced FEBRUARY 2006

Motorcycle mechanics assemble, maintain, repair and restore motorcycles and other multi-wheeled lightweight all-terrain vehicles that do not have lateral seating and are equipped with a handle bar on which the vehicle's controls are located.

NOC Number(s): 7334
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M i

Duties

Duties vary from one position to another but, in general, motorcycle mechanics:

- rebuild or replace parts
- diagnose problems and locate failures with the electrical system, engine, power train, suspension or frame by inspecting the vehicle, listening to it operate and using testing equipment
- dismantle, adjust and repair or replace mechanical and electrical system parts and components
- perform routine maintenance such as cleaning and adjusting the carburetor, adjusting the clutch, brakes and drive chain, and replacing worn parts
- discuss complaints with customers or the service manager
- operate machine tools, boring bar mills and lathes.

Motorcycle mechanics who work for motorcycle dealerships also assemble new machines.

Working Conditions

Motorcycle mechanics usually work indoors in shops where it is sometimes noisy. There is some risk of injury when working near exhaust fumes.

Motorcycle mechanics may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Motorcycle mechanics need the following characteristics:

- mechanical interest and aptitude
- good customer service skills
- the ability to work long hours in the busy season
- the ability to keep up to date with changing technology.

They should enjoy doing precision work and solving problems.

Educational Requirements

To work in Alberta, motorcycle mechanics must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta high school transcript with Applied Math 20, English 20 or 23 and Science 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,360 hours of on-the-job training and eight weeks of technical training in the first and second year and a minimum of 1,420 hours of on-the-job training and six weeks of technical training in the third and fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Motorcycle mechanic apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered by the Northern Alberta Institute of Technology (NAIT) in Fairview.

Outside the apprenticeship program, the **Northern Alberta Institute of Technology** offers a 15-week Harley-Davidson Technician certificate of achievement program in Fairview. The entrance requirement is English 10 or a Grade 11 English and Math 10 or a Grade 11 math.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Motorcycle mechanics are employed by motorcycle dealerships or repair shops, or are self-employed.

In colder climates such as Alberta's, motorcycle repair work is seasonal. Motorcycle mechanics are very busy doing diagnostic and repair work in the warmer months and may encourage customers to have preventative maintenance work done in the winter. However, due to the seasonal nature of the work, motorcycle mechanics must be skilled in other types of repair work (e.g. repairing snowmobiles) to remain employed year-round.

Experienced motorcycle mechanics may advance to supervisory positions or set up their own businesses. Alberta certified journeyman motorcycle mechanics who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Motorcycle mechanics are part of the larger National Occupational Classification 7334: Motorcycle and Other Related Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Retail Trade**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (see duties)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 400 Albertans are employed in the Motorcycle and Other Related Mechanics occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since motorcycle mechanics form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for motorcycle mechanics.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice motorcycle mechanics earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second, 75 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$15 to $28 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Motorcycle and Other Related Mechanics occupational group working part-time or full-time earned from **$16,500 to $60,700 a year.** The average salary was **$38,400 a year.**

Municipal Administrator

Produced JUNE 2003

Municipal administrators administer the affairs of municipalities including cities, towns, villages, summer villages, municipal districts and specialized municipalities.

NOC Number(s): 0414
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D I M**

Duties

Municipal administrators are the administrative heads of municipalities. In small or sparsely populated municipalities, they may work part-time. In larger municipalities, administrators may have a sizable staff to assist them in administering the affairs of the municipality.

In general, municipal administrators are responsible for:

- the day-to-day operations of the municipality
- promoting and maintaining good public relations
- safe-keeping records such as minutes, by-laws and accounts
- recommending policies and actions to the municipal council
- providing input into strategic planning
- carrying out the council's directives and policies
- directing the general administrative functions of the municipality including supervising office staff and purchasing procedures
- preparing budgets and managing finances
- preparing by-laws approved by council
- ensuring that by-laws are enforced
- conducting elections.

In many larger municipalities, the administrator's job title is City Manager or Commissioner. In such cases, responsibilities are often delegated to one or more individuals supervised by the municipal administrator.

Municipal administrators attend and participate in all meetings of the municipal council and council committees. However, they do not have the right to vote unless appointed to a committee.

Working Conditions

Municipal administrators work in an office environment. They may work longer than the usual 40-hour week and are often required to attend evening meetings.

Personal Characteristics

Municipal administrators must be able to:

- provide strong leadership and direction
- work in a team environment as well as work independently
- communicate their ideas effectively, both in person and in writing
- deal effectively with stress.

They should enjoy co-ordinating information and making decisions, negotiating with people and finding innovative solutions to problems, and administering and controlling budgets.

Educational Requirements

(section revised APRIL 2005)

Municipal administrators come from a variety of academic backgrounds, including:

- public administration
- business administration
- engineering
- accounting
- urban planning
- recreation administration.

In addition to a strong academic background, municipal administrators are generally required to have some management experience.

Prospective municipal administrators should take post-secondary education related to local government administration or start in junior administrative positions in medium-sized municipalities where they will get a wide range of exposure to municipal affairs. Many administrators have begun their careers working in business firms, banks or retail stores.

One year certificate and two year diploma programs in business administration are offered by post-secondary education institutions throughout Alberta. In general, the entrance requirement for these programs is a high school diploma or equivalent with specific course requirements.

Three year and four year degree programs in business, commerce and management are also offered by universities and colleges throughout the province. In general, the entrance requirement for such programs is completion of one or two years of applicable university study, or a high school diploma with an average of 65 to 80 per cent, as specified by each institution, in English 30 and four other appropriate grade 12 subjects (specific course requirements vary from program to program).

Athabasca University offers a one year University Certificate in Public Administration program. Applicants must be at least 16 years of age.

The Faculty of Extension at the **University of Alberta** in Edmonton offers an eight course Local Government Certificate Program and an online National Advanced Certificate in Local Authority Administration program. Applicants for the Local Government Certificate program must have a high school diploma or be at least 21 years of age to apply as a mature student.

Continuing education programs are often offered on an as needed basis.

For more information about programs and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certified Local Government Manager is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Certified Local Government Manager, you must be a registered member of the Society of Local Government Managers of Alberta (SLGMA). You do **not** have to be registered if you do not call yourself a Certified Local Government Manager.

Employment and Advancement

(section revised JANUARY 2006)

Municipal administrators should have work experience related to:

- management
- public relations
- finance
- administration
- law.

Those who are willing to move from one municipality to another over a number of years may acquire more responsibility and experience with each move, and have an advantage when seeking employment as municipal administrators.

Municipal administrators are part of the larger National Occupational Classification 0414: Other Managers in Public Administration. In Alberta, most people employed in this classification work in the **Public Administration** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Public Administration industry)
- **location** in Alberta (employment prospects are best for administrators willing to work in municipalities that are not located close to an urban centre)
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 700 Albertans are employed in the Other Managers in Public Administration occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since municipal administrators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for municipal administrators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for municipal administrators vary greatly, depending on the size and operations of the municipality.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Managers in Public Administration occupational group working part-time or full-time earned from **$25,500 to $136,400 a year.** The average salary was **$98,600 a year.**

Alberta Human Resources and Employment

Municipal Recycling Truck Driver

Produced JUNE 2003

Municipal recycling truck drivers collect, sort and transport recyclable waste materials such as glass, plastic, metal and paper.

NOC Number(s): 7411.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O d**

Duties

Municipal recycling truck drivers pick up special types of recyclable materials along designated routes. They may operate regular trucks or specially designed trucks. Specially designed trucks may have dual-drive cabs or automated side loaders.

Specific duties vary from one employer to another but, in general, municipal recycling truck drivers:

- conduct vehicle inspections before they start driving to ensure that their vehicles are in safe driving condition
- follow a regular pick-up route or route card instructions
- load blue bags into the collection unit or sort materials in collection boxes into truck compartments
- deal with the public
- communicate with dispatchers concerning delays, unsafe sites, accidents, equipment breakdowns and other maintenance problems
- drive back to recycling depots or warehouses to dump truck contents
- refuel trucks at depots.

In some municipalities, truck operators collect both refuse and recyclable materials (for more information, see the Refuse Truck Driver occupational profile).

Working Conditions

Municipal recycling truck drivers usually work shifts. They may be required to work split shifts, afternoons and weekends.

Drivers work in all types of weather, around waste materials which may be dirty or smelly. They may be required to routinely lift items weighing up to 25 kilograms.

Personal Characteristics

Municipal recycling truck drivers need the following characteristics:

- the ability to work steadily and quickly all day long
- the ability to follow directions
- the ability to work independently.

They should enjoy routine, repetitive work and driving.

Educational Requirements

There are no formal education requirements for municipal recycling truck drivers. However, a high school diploma may be required for advancement.

Employers require job applicants to have a clean driving record and, depending on the type of trucks used, a valid Alberta Class 5 Operator's License with air brake certification or a Class 3 with air brakes.

Municipal recycling truck drivers are **trained on the job**.

Employment and Advancement

(section revised JANUARY 2006)

Recycling truck drivers may be employed by:

- municipalities (cities or towns)
- non-profit recycling organizations
- privately owned recycling collection services.

Experienced drivers may move into other driving occupations (for more information, see the Bus Driver and Truck Driver occupational profiles). Advancement opportunities generally require at least a high school diploma.

Municipal recycling truck drivers are part of the larger National Occupational Classification 7411: Truck Drivers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**
- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 40,050 Albertans are employed in the Truck Drivers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since municipal recycling truck drivers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for municipal recycling truck drivers.)

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Truck Drivers occupational group working part-time or full-time earned from **$15,200 to $109,100 a year.** The average salary was **$49,200 a year.**

Alberta Human Resources and Employment

Municipal Recycling Waste Handler

Produced JUNE 2003

Municipal recycling waste handlers sort recyclable domestic and commercial waste materials such as glass, plastic, metal and paper.

NOC Number(s): 9619
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O i**

Duties

Municipal recycling waste handlers work at a depot or warehouse where they sort bulk loads of waste paper, glass materials or other recyclable waste. Their duties vary depending on the employer but, in general, they:

- verify that waste material is of a specified type and grade and is free of contaminants
- load waste materials onto conveyor belts or into bulk loads which can be inspected
- operate and regulate the flow of paper into shredding/baling machines
- operate fork-lifts to move bales of shredded or compressed materials into storage areas or to load waste materials onto trucks or trailers
- assist the general public in unloading recyclable material
- operate hydraulic lift jacks to move bales or loads of bulk paper.

Workers in municipal recycling depots such as bottle return operations may also:

- direct and assist people unloading recyclable material
- calculate payments and pay customers for returned materials.

Working Conditions

Municipal recycling waste handlers often work shifts. They are on their feet most of their working hours, and may be required to lift items weighing up to 25 kilograms. They must observe safety precautions such as wearing hard hats, gloves, safety shoes and safety glasses, and not wear loose clothing when working near conveyor belts.

The working environment can be dusty, dirty and sometimes smelly. Some materials may be sorted outside due to storage constraints.

Personal Characteristics

Municipal recycling waste handlers need the following characteristics:

- the ability to work steadily and quickly for an entire shift
- the ability to perform routine, repetitive tasks but still remain alert
- the ability to work independently.

Those who deal with the public must also be able to deal pleasantly and courteously with a wide variety of people.

Municipal recycling waste handlers should enjoy taking a methodical approach to their work and handling materials.

Educational Requirements

There are no formal education requirements for recycling waste handlers. However, a high school diploma is a definite asset for advancement.

Municipal recycling waste handlers are **trained on the job**. Those who operate bob cats and fork lifts must qualify for the required certification.

Employment and Advancement

(section revised JANUARY 2006)

Recycling waste handlers may work for:

- municipalities (cities and towns)
- non-profit recycling organizations
- privately owned recycling collection services.

In large operations, experienced recycling waste handlers may advance to supervisory positions.

Municipal recycling waste handlers are part of the larger National Occupational Classification 9619: Other Labourers in Processing, Manufacturing and Utilities. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Other Manufacturing**
- **Management, Administrative and Other Support Services**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Minerals Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,450 Albertans are employed in the Other Labourers in Processing, Manufacturing and Utilities occupational group which is expected to grow up to 1.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since municipal recycling waste handlers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for municipal recycling waste handlers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Labourers in Processing, Manufacturing and Utilities occupational group working part-time or full-time earned from **$12,100 to $73,700 a year.** The average salary was **$26,600 a year.** Salary ranges for municipal recycling waste handlers are generally considerably lower.

Museum Technician

Produced OCTOBER 2003

Museum technicians assist curators, conservators and other museum staff with functions such as researching, developing, managing and conserving museum collections, setting up exhibits and delivering public programs.

NOC Number(s): 5212.6
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Museum technicians are part of a team of museum personnel concerned with the safe and suitable display and storage of artifacts (products of human hands) and/or specimens (natural history items). Their duties and responsibilities vary depending on the type of museum collection. Under the supervision and direction of museum curators and conservators, they may:

- assist in collections management activities such as collecting and cataloguing, preparing condition reports, preparing and storing items, records management and preservation activities
- assist with cleaning, repair, preservation and restoration
- help researchers prepare information about collections, programs and special events, and conduct tours for students and special interest groups
- help develop and manage storage areas and monitor environmental conditions (e.g. humidity levels)
- assist with exhibit design and ensure that necessary materials are available for assembling and maintaining exhibits
- build display cases, packing cases and scale models of exhibits
- pack, unpack, move and install items for display
- ensure touring exhibits are properly and safely packed, transported and displayed, report on their status and condition, and identify and correct any problems with exhibit set-up
- perform seasonal field work at archaeological or historic sites which may involve inspecting and identifying artifacts or specimens, doing an environmental assessment, taking inventory and recording observations
- supervise and work with seasonal staff and volunteers.

Working Conditions

Museum technicians work primarily indoors in offices, storage areas and exhibition galleries, but may sometimes work outdoors at archaeological or historic sites. They may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Museum technicians need the following characteristics:

- an interest in art, natural history or human history
- good oral and written communication skills
- good interpersonal and team building skills
- mechanical aptitude
- the ability to multi-task.

They should enjoy doing precise, detailed work, taking a methodical approach to their work and solving problems.

Educational Requirements

In Alberta, there are no standard education requirements for museum technicians but employers generally prefer to hire applicants who have **a related bachelor's degree, or a diploma or certificate in museum studies**. Computer skills and related volunteer or paid experience (e.g. in the care and handling of collections, records management, research, exhibit development) are definite assets. Depending on the type of museum, skills in related fields such as carpentry, electronics, mechanical engineering, painting or sewing may also be valuable.

Museums Alberta offers a Certificate in Museums Studies program that includes eight core courses.

Employment and Advancement

(section revised JANUARY 2006)

Museum technicians work for:

- federal government departments and agencies (e.g. National Museums of Canada)
- provincial government departments (e.g. Alberta Community Development)
- municipal and local history museums
- galleries
- science centres
- natural and historic park museums, zoos, botanical gardens and interpretive centres
- historical societies
- privately-funded historic and cultural agencies
- universities.

Without further education, advancement opportunities for museum technicians are limited.

Museum technicians are part of the larger National Occupational Classification 5212: Technical Occupations Related to Museums and Art Galleries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 400 Albertans are employed in the Technical Occupations Related to Museums and Art Galleries occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since museum technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for museum technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Technical Occupations Related to Museums and Art Galleries occupational group working part-time or full-time earned from **$14,700 to $75,800 a year.** The average salary was **$32,200 a year.**

Music Copyist

Produced MAY 2003

Music copyists prepare individual parts (instrumental and vocal) from musical scores. They may copy all of the music on manuscript paper exactly as written by the composer or arranger, or input the correct information into a music copying computer program.

NOC Number(s): 5132.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I m**

Duties

Music copyists produce professional-looking handwritten or computer-generated musical scores for each musician to study and use during rehearsals and performances. In general, music copyists copy musical parts to produce separate scores for different parts and correct errors (e.g. incorrect notes or rests).

Music copyists do not always rewrite the complete score. Songwriters may hire copyists to write out a "lead sheet" containing the melody line, chord symbols and words to the song or to write out specific instrumental parts from a score. Copyists may also write out copies of specific instrumental parts from orchestral scores (e.g. percussion or brass music only).

Copyists generally follow a copyists' guide manual, but some arrangers require copyists to adjust to their personal method of copying.

The computer hardware and software required to produce music scores is expensive. Hand copying is often faster and therefore more useful for meeting unexpected deadlines.

Working Conditions

Music copyists generally work in their own homes or at the homes of arrangers and composers. Last minute requests for music copying are common, so copyists often work under pressure to meet deadlines. They usually work alone but, on large music projects (e.g. film scores), several copyists may work together.

Personal Characteristics

Music copyists need the following characteristics:

- the ability to produce consistently neat, clear and accurate work
- the ability to work quickly and meet deadlines.

They should enjoy using tools and computers to perform tasks requiring precision, and working independently.

Employment and Advancement

There are **no formal education or training requirements** for music copyists. However, to be successful, they need:

- a good knowledge of music notation and jazz and orchestral scores
- an understanding of both traditional and contemporary music
- a working knowledge of current software programs for score and part generation
- some familiarity with the qualities and limitations of instruments and voices.

Many copyists have taken courses in orchestration, music theory, harmony, composition and notation. Some music copyists have formal training in music from a music conservatory, college or university.

Studying samples of copied music may provide useful experience. Courses in calligraphy may be helpful for developing professional handwriting skills.

Educational Requirements

(section revised JANUARY 2005)

Music copying is basically a freelance occupation. Most copyists in Alberta are hired by composers and arrangers to score their music. In larger music production centres such as Montreal and Toronto, copyists may be hired by:

- music publishers
- television and recording studios
- performers
- composers and arrangers
- songwriters (for lead sheets)
- music directors.

On occasion, copyists working for music publishing companies may advance to music editor positions.

Music copyists are part of the larger National Occupational Classification 5132: Conductors, Composers and Arrangers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Repair, Maintenance, Personal and Other Services**.

In Alberta, music copying is a part-time occupation that generates extra income for people who work primarily in other music-related fields such as teaching, arranging or performing. There is a very limited amount of available work in this area.

Salary

(section revised OCTOBER 2005)

Professional music copyists may be members of the American Federation of Musicians of the United States and Canada which establishes minimum wage scales for copying in various categories. However, copyists often negotiate "per page" fees above the union minimum. Rates vary depending on the complexity of the work, whether computer copying is involved or working past midnight is required.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conductors, Composers and Arrangers occupational group working part-time or full-time earned an average salary of **$22,900 a year**.

© Government of Alberta, Human Resources and Employment

Musical Instrument Repair Technician

Produced MAY 2003

Musical instrument repair technicians, including piano technicians, pipe organ repairers, band instrument repair technicians and violin repairers, maintain and repair musical instruments.

NOC Number(s): 7445
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Piano technicians make up the majority of musical instrument repair technicians. In general, they:

- diagnose problems with faulty instruments (which may involve partially dismantling them for inspection)
- make mechanical and structural repairs
- adjust the touch and recondition the action
- rebuild pianos, including repairing cracks in the sound board and restringing
- tune pianos by adjusting the strings.

A piano problem may have its source in any of the many wooden, steel, iron, ivory or felt parts. Some pianos have humidity systems to help them stay in tune and protect them from extreme humidity conditions.

Pipe organ repairers work on pipe organs in churches and concert halls. Pipe organs create sound by forcing air through flue pipes or reed pipes ranging in size from 17 centimetres to ten meters in length. In general, pipe-organ repairers:

- tune pipes
- perform regular maintenance tasks such as cleaning the pipes
- locate and correct problems in organ components such as slides, valves, keys and air channels or the electric wind-generating equipment.

Pipe organ repairers may also install new pipe organs. The installation process may take weeks or months, and require the installer to work in cramped locations.

Although pianos, pipe organs, electronic organs and synthesizers all have keyboards and look somewhat alike, their mechanisms are quite different. Therefore, few repairers are qualified to work on more than one type of instrument. Electronic instruments are generally repaired by technicians who are familiar with electronic components.

Band instrument repair technicians repair brass and woodwind instruments, and some percussion instruments. In general, they:

- solder broken joints and parts
- remove dents in brass
- buff and re-lacquer dull and tarnished brass
- align valves and slides
- replace missing parts.

Wind instrument repair technicians:

- replace pads, corks, felts and springs
- align pads and keys
- restore mechanical action to parts
- repair cracks in wood instruments
- remove dents in sax and flute bodies and keys
- solder posts and parts.

Senior technicians may make custom repairs and modifications, and restore instruments to better than new condition.

Violin repairers build and restore stringed instruments such as violins, violas, cellos and double basses. In general, they:

- make minor repairs such as repairing or replacing worn parts or strings
- restore or reconstruct cracked or broken instruments.

Restoration is often more challenging than building a new instrument. The challenge is to ensure that, upon completion of the restoration, no evidence of repair remains.

Depending on the size of the shop or repair centre, music instrument repairers may have additional responsibilities such as customer service or general cleaning duties.

Working Conditions

Musical instrument repair technicians work in shops, factories, music stores, homes and public buildings such as schools, churches and concert halls. Those who work in factories work a standard 40 hour work week; those who are self-employed set their own hours and may work evenings and weekends for the convenience of their customers. Band instrument repair technicians often work long hours during the summer months to repair schools instruments before September, and take time off after December.

Lifting up to 10 kilograms is routinely required. Some lifting up to 25 kg may be required.

Personal Characteristics

Musical instrument repair technicians need the following characteristics:

- good manual dexterity and physical stamina
- keen hearing
- mechanical ability
- the ability to make delicate adjustments
- patience and perseverance.

Those working in shops must be able to get along well with others because they often work in close quarters for long periods of time.

Musical instrument repair technicians should enjoy using tools and equipment to perform tasks requiring precision, taking a methodical approach to their work, and finding unique solutions to problems.

Educational Requirements

Depending on the type of instrument, most musical instrument repair technicians learn their craft by **working with experienced repairers for several years or taking related training programs.** Employers generally prefer to hire applicants who have Grade 12 or equivalent education. Courses in mathematics, physics, industrial arts and music are a definite asset. Bookkeeping courses are helpful for those who want to eventually be self-employed.

In Alberta, **Keyano College** in Fort McMurray offers a two year Music Instrument Repair diploma program for brass and woodwind instruments. The entrance requirement is a high school diploma with Grade 12 English or satisfactory completion of a college entrance test or equivalent.

To become a Registered Piano Technician with the **Canadian Association of Piano Technicians**, applicants must successfully complete a three-part exam that includes bench work, tuning and a written exam.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2005)

Aspiring musical instrument repair technicians may find it difficult to obtain a training position. Manufacturers and dealers with service departments have limited numbers of training positions, and private repair technicians are often too busy to train someone new or not busy enough to warrant hiring someone. Most employers prefer to hire those who have previous related experience or formal training in the field.

Most piano technicians work primarily for private owners. Advancement may take the form of specializing in concert work or in rebuilding pianos.

Opening a musical instrument tuning and repair business is relatively inexpensive, but the market is very competitive. Maintaining another source of income until the business is well established is advisable.

Starting a brass and woodwind repair business requires a sizable investment in specialized tools and supplies, and mistakes can be very costly. It is strongly recommended that inexperienced brass and wood instrument repair technicians gain experience in larger full service shops before attempting to set up their own businesses.

Experienced repair technicians employed in factories, large music stores or repair shops may advance to supervisory positions.

Musical instrument repair technicians are part of the larger National Occupational Classification 7445: Other Repairers and Servicers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Retail Trade**
- **Repair, Maintenance, Personal and Other Services**
- **Wholesale Trade**.

Salary

Inexperienced trainees may be paid **minimum wage** (or work as a volunteer in return for training) and their wages often remain low until they are qualified to work independently.

The earnings of independent repair technicians gradually increase as their businesses grow, and level off when they have as much work as they can handle. Their fees vary greatly depending on their area of expertise, reputation and business skill.

OCC*info* Alberta Occupational Profiles

Alberta Human Resources and Employment

Nail Technician

Produced DECEMBER 2003

Nail technicians clean, shape, extend and polish clients' fingernails and toenails.

NOC Number(s): 6482.4
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S O**

Duties

Duties vary from one position to another but, in general, nail technicians:

- remove old polish
- clean and shape nails to make them more attractive
- soften cuticles and push them back
- treat the ends of nails to make them more resilient
- whiten nail tips with a nail white pencil
- apply artificial nails
- extend natural nails with acrylic powder and liquid
- wrap nails to mend and strengthen them
- apply nail tips and ridge filler or apply a gel and harden it under ultraviolet light
- buff nails or apply polish
- decorate clients' nails with designs or attach ornaments to nails
- remove dead skin from hands or feet and apply warm parrafin wax treatments
- advise clients about colours and nail care products
- promote and sell nail care products
- sanitize their tools and keep their work area clean
- maintain an inventory of supplies.

They may also:

- teach clients how to care for their nails and apply polish
- book client appointments and accept payments
- keep records of the services provided.

Working Conditions

Most nail technicians work in beauty salons and are seated for most of their working hours. They may work full-time or part-time, but Saturday and evening shifts are generally required.

Personal Characteristics

Nail technicians need the following characteristics:

- an outgoing, friendly personality
- a good sense of colour
- patience and the ability to deal tactfully with difficult clients
- a well-groomed appearance.

They should enjoy:

- taking a methodical approach to compiling information
- serving and assisting people
- using specialized products and techniques.

Educational Requirements

(section revised FEBRUARY 2005)

There are **no standard education requirements** for nail technicians. However, a high school diploma and related training are definite assets when seeking employment.

Since the Hairstylist Apprenticeship Program includes training in manicure and pedicure, many hairstylists acquire related knowledge and skills through work experience (for more information, see the Hairstylist occupational profile). However, additional training may be required for hairstylists who wish to specialize in nail care.

People interested in entering this occupation should discuss their training options with practicing nail technicians and potential employers. On-the-job training opportunities may be difficult to find because most beauty salons employ only one nail technician and shops specializing in this field are usually small operations.

In Alberta, the following private vocational schools offer Nail Artistry/Technician programs:

- **Alberta Academy of Aesthetics** in Edmonton
- **Beauty Tech Esthetic School** in Edmonton
- **International Academy of Esthetics** in Sherwood Park
- **Marvel College** in Calgary, Edmonton and Red Deer
- **Nails Academy** in Calgary
- **Trend College** in Edmonton
- **Zeneba Academy of Esthetics** in Calgary.

For information about esthetics programs that may include nail artistry components, see the Esthetician occupational profile.

For specific admission requirements and information about mature student admission policies, please check institution calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Nail technicians are employed, or work on a contract basis, in beauty salons.

Without additional training, advancement opportunities are limited. However, some nail technicians set up their own shops.

Nail technicians are part of the larger National Occupational Classification 6482: Estheticians, Electrologists and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,350 Albertans are employed in the Estheticians, Electrologists and Related Occupations group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since nail technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for nail technicians.) Employment prospects are best for nail technicians who have other related skills as well (for more information, see the Esthetician and Hairstylist occupational profiles).

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings for nail technicians vary considerably depending on the location, the services offered and the technician's reputation. Rates are usually set for each type of service so earnings vary from day to day, depending on the type and number of services performed.

Nail technicians may rent space in a beauty salon and keep their earnings separate from those of the salon, or they may be employed by the salon and paid a basic salary plus commission. Those who are self-employed must pay overhead costs (rent, supplies, etc.) from their earnings.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Estheticians, Electrologists and Related Occupations group working part-time or full-time earned from **$11,100 to $45,500 a year.** The average salary was **$19,600 a year.**

© Government of Alberta, Human Resources and Employment

Nanny

Produced JUNE 2003

Nannies care for children in private homes, providing for their social, emotional, intellectual and physical development.

NOC Number(s): 6474.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M d**

Duties

Nannies' duties vary depending on the household and the number and age of children but, in general, they:

- supervise and guide children
- bath and dress infants and help children dress and wash
- sterilize bottles, prepare formulas and change diapers for infants
- plan and prepare nutritious meals for the children or whole family
- keep children's rooms and the household clean and tidy
- do the childrens' laundry and ironing
- organize age-appropriate play activities
- take children to school and appointments
- supervise study periods and assist with homework
- support the emotional development and well-being of the children in their care
- discipline children according to the methods requested by the parents
- perform housekeeping duties as time allows.

Nannies may also keep records which include daily observations about each child and information about activities, meals served and medications administered. Nannies usually receive instructions from their employers, but often work with little supervision.

Working Conditions

Child care is physically demanding work, frequently requiring lifting children and equipment weighing up to 25 kilograms. Nannies are on their feet most of the time.

The work can also be emotionally demanding. Some nannies live in the same residence with their employers; others return to their own homes evenings and weekends. Live-in nannies have their own furnished rooms or suites, but may be subject to restrictions regarding telephone calls, visitors or time away from home.

Nannies sometimes travel with the employing family on vacations. In some cases, live-in nannies have their health care premiums paid, are included in the family's club memberships or are allowed personal use of a family vehicle.

Personal Characteristics

Nannies need the following characteristics:

- a genuine interest in children
- physical stamina
- good judgement and the ability to work independently
- patience
- excellent interpersonal skills
- good oral and written communication skills.

They should enjoy working with children, organizing meal preparation and housekeeping duties, and overseeing children's activities.

Educational Requirements

There are **no standard education requirements** for nannies. Some employers consider related experience and the ability to care for children, cook, clean and get along well with others more important than formal education. Most families require job applicants to have a high school diploma or a certificate in Early Childhood Education (for more information, see the Early Childhood Educator occupational profile). Character references are usually requested and some employers require police clearance. First-aid certification and CPR training, and courses related to child care and child development are definite assets.

To ensure that those who apply for permanent residence in Canada will be able to succeed in the general labour market, federal legislation requires that live-in foreign nannies have the equivalent of a Canadian high school diploma, and either six months of caregiving training or a year of caregiving experience in the year prior to application.

SICES International Academy, a private vocational school in Edmonton, offers a 200 hour Caregiver program and a six month Live-in Caregiver program. High school credits may be awarded for some modules in the Live-in Caregiver program.

Employment and Advancement

(section revised JANUARY 2006)

Nannies are employed by private individuals and by private agencies.

Nannies may move into other personal service jobs such as home support aide or residential aide (for more information, see the Personal Care Attendant occupational profile). Experienced nannies who have the required business skills may become family day home operators or open their own placement agencies.

Nannies are part of the larger National Occupational Classification 6474: Babysitters, Nannies and Parents' Helpers. In Alberta, most people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,250 Albertans are employed in the Babysitters, Nannies and Parents' Helpers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 240 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since nannies form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for nannies.)

There is a high employment turnover rate in this occupation so employment opportunities for nannies are readily available.

Salary

(section revised OCTOBER 2005)

Wage rates in this occupation are not covered by minimum wage legislation and nannies' incomes vary considerably. Salaries for live-in, foreign nannies are controlled by federal government legislation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Babysitters, Nannies and Parents' Helpers occupational group earned from **$14,800 to $39,700** a year. The average salary was **$22,200 a year**.

Naturopathic Doctor

Produced FEBRUARY 2005

Naturopathic doctors use natural, non-toxic healing therapies to treat patients' diseases and disorders.

NOC Number(s): 3123.3
Minimum Education: 7 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M S

Duties

Naturopathic doctors use natural methods and substances to support and stimulate the body's ability to heal itself. In general, they:

- address the environmental, lifestyle, attitudinal and emotional aspects of health as well as the physical aspects.
- diagnose and treat the causes of disease using natural and non-invasive therapies.
- emphasize disease prevention and health promotion and encourage patients to take responsibility for their own health.

To restore normal body function, naturopathic doctors look for the underlying causes of illness and disease such as:

- nutritional deficiency
- faulty posture
- impurities in the air, water or food
- sensitivities or intolerances (foods, chemicals)
- toxic influences of chemicals, drugs and metals
- inherited predispositions to disease
- physical or psychological stresses
- insufficient rest or recreation
- unsupervised self-treatment
- undiagnosed infections, organisms or imbalances.

Once they have identified the underlying causes of a patient's symptoms, naturopathic doctors develop an individualized treatment plan. Treatments may include:

- botanical medicine
- clinical nutrition
- homeopathic medicine
- acupuncture and oriental medicine
- lifestyle counselling
- physical therapies (e.g. massage, adjustment, hydrotherapy).

Naturopathic doctors may refer patients who have conditions that require treatments such as surgery to other health care practitioners for treatment.

Working Conditions

Most naturopathic doctors work in private clinics. They are on their feet examining patients for part of their working day and at a desk talking to patients and doing paperwork for part of the day. Light lifting (up to 10 kilograms) is required.

Naturopathic doctors may set their own hours. However, for the convenience of their patients, they often work some evenings and weekends.

Personal Characteristics

Naturopathic doctors need the following characteristics:

- the ability to establish rapport with patients and gain their trust and confidence
- emotional strength and maturity
- good communication skills.

They should enjoy gathering information by observing, interviewing and examining patients, providing naturopathic treatments, and advising patients.

Educational Requirements

Training for a career as a naturopathic doctor requires **seven years of post-secondary education:** three years of university-level pre-med sciences followed by four years in a Doctor of Naturopathic Medicine program.

The only fully accredited Doctor of Naturopathic Medicine program in Canada is offered by the **The Canadian College of Naturopathic Medicine** in Toronto. The entrance requirement is three years (15 full-year credits or 90 credit hours) in a bachelor's degree program including courses in biology, general chemistry (with lab), organic chemistry (with lab), biochemistry, psychology and the humanities.

The **Boucher Institute of Naturopathic Medicine** in New Westminster, British Columbia, has obtained candidacy status and is awaiting full accreditation from the Canadian Naturopathic Association. Graduates qualify to take standardized licensing exams.

In the United States, the following four schools of naturopathic medicine offer ND programs:

- **Bastyr University School of Naturopathic Medicine** near Seattle, Washington
- **National College of Naturopathic Medicine** in Portland, Oregon
- **Southwest College of Naturopathic Medicine and Health Sciences** in Scotsdale, Arizona
- **University of Bridgeport College of Naturopathic Medicine** in Bridgeport, Connecticut.

These institutions should be consulted prior to registration in a pre-professional program to ensure that their entrance requirements will be met.

In Alberta, colleges and universities located throughout the province may offer the pre-professional courses required for admission to ND programs. Post-secondary entrance requirements vary depending on the institution and the program but, in general, include a high school diploma with an acceptable average in five appropriate Grade 12 subjects (e.g. English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and Physics 30).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

To practice naturopathic medicine in regulated Canadian provinces and American states, graduates of Doctor of Naturopathic Medicine programs must pass standardized licensing exams and register with appropriate provincial or state licensing boards.

Employment and Advancement

(section revised JANUARY 2006)

Most naturopathic doctors set up a private practice of their own or join a clinic with other health care practitioners. Some naturopathic doctors are employed in related research and development, marketing, teaching or consulting positions.

As with other health professions, naturopathic practices take time to build and success depends on individual initiative, experience and ability.

Naturopathic doctors are part of the larger National Occupational Classification 3123: Other Professional Occupations in Health Diagnosing and Treating. In Alberta, people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)

- **size of the occupation.**

About 250 Albertans are employed in the Other Professional Occupations in Health Diagnosing and Treating occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since naturopathic doctors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for naturopathic doctors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Incomes for naturopathic doctors may vary considerably but, in general, are comparable to those of other doctors.

Nuclear Medicine Technologist

Produced NOVEMBER 2004

Nuclear medicine technologists operate specialized equipment that maps the distribution of radioactive tracers and tagged compounds to assist in the diagnosis and treatment of disease.

NOC Number(s): 3215.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

In general, nuclear medicine technologists:

- review patient records
- prepare and administer radioactive substances by mouth or injection
- operate special equipment that detects and maps low concentrations of radioactivity in patients' bodies
- assist and work with patients during test procedures
- calibrate and check equipment for correct functioning
- comply with radiation safety standards for sealed and unsealed sources.

Working Conditions

Nuclear medicine technologists work in hospitals and clinics. They are on their feet for much of the time and may be required to lift up to 25 kilograms. Strict attention to safety procedures is required to avoid accidental exposure to radiation or body fluids.

Personal Characteristics

Nuclear medicine technologists need the following characteristics:

- sensitivity to patient needs
- the ability to maintain a high level of accuracy in their duties
- good organizational skills
- good problem-solving skills.

Educational Requirements

In Alberta, nuclear medicine technologists are trained through **a co-operative two year diploma program**. The first 10 months of academic study, offered at the **Southern Alberta Institute of Technology (SAIT)** in Calgary, are followed by 12 months of practical experience at one or more hospitals, clinics and associated facilities in Edmonton, Calgary or Red Deer. Practicum locations are determined upon acceptance to the program.

The minimum entrance requirement for this program is a high school diploma or equivalent with an overall average of at least 60 per cent in English 30, Math 30 or 31 or Pure Math 30, Chemistry 30, Biology 30 or Physics 30, plus one of the following: Math 31, Language 30, Physics 30, Biology 30, Social Studies 30 or Science 30.

This is a quota program so higher marks are generally required to gain admission. Computer skills and post-secondary science courses are definite assets. Students are selected on the basis of academic record, quality of application, prior experience, understanding of the profession and personal interviews. A medical examination, immunization and a criminal record check are required.

For current information, please check the SAIT calendar or website.

Other Requirements

(section revised AUGUST 2005)

Under Alberta's Health Professions Act, only registered members of the Alberta College of Medical Diagnostic and Therapeutic Technologists (ACMDTT) may call themselves a Magnetic Resonance Technologist, Nuclear Medicine Technologist, Radiographic Technologist or Radiation Therapist. Registered members provide health services listed in Schedule 12 of the Health Professions Act.

Employment and Advancement

(section revised JANUARY 2006)

Nuclear medicine technologists are employed in hospitals and clinics.

Experienced nuclear medicine technologists may take additional training or a Bachelor's degree to move into teaching or administration positions.

Nuclear medicine technologists are part of the larger National Occupational Classification 3215: Medical Radiation Technologists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Medical Radiation Technologists occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since nuclear medicine technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for nuclear medicine technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Radiation Technologists occupational group working part-time or full-time earned from **$37,300 to $71,800 a year.** The average salary was **$57,600 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Nurse Practitioner

Produced OCTOBER 2004

Nurse practitioners are registered nurses who have advanced training in health assessment, health promotion and illness prevention. They diagnose and treat health problems, order and interpret tests, and prescribe drugs.

NOC Number(s): 3152
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S M D**

Duties

Duties and responsibilities in this occupation vary from province to province in Canada. In Alberta, nurse practitioners may:

- complete comprehensive health assessments
- diagnose health problems
- counsel patients regarding health problems
- order and interpret diagnostic tests
- refer patients to other health care providers as needed
- prescribe medications to treat common diseases, disorders and injuries
- consult and collaborate with physicians
- participate in initiatives to promote community health.

Nurse practitioners work independently from the beginning of patient care to working with other care professionals. They may specialize in:

- care throughout the lifespan
- acute care
- caring for people in particular age groups (infants, children, seniors)
- occupational health
- mental health
- emergency care
- women's health.

Working Conditions

Nurse practitoners work in a variety of health care settings, sometimes in isolated communities. They may work regular clinic hours and be on call for emergencies, or work shifts including nights, weekends and holidays.

Nurse practitioners often are exposed to infectious diseases and required to lift items weighing up to 10 kilograms. Their work can be intellectually and emotionally demanding as well as physically demanding.

Personal Characteristics

Nurse practitioners need the following characteristics:

- problem solving and critical thinking abilities
- excellent verbal and written communication skills
- organizational skills
- good judgment and the ability to make decisions quickly in stressful situations
- patience, understanding and a caring attitude
- flexibility, humour and enthusiasm
- the ability to lead and work co-operatively with others
- general good health.

They should enjoy working with and consulting others, solving problems, providing care and directing the work of others.

Educational Requirements

Nurse practitioners start their careers as registered nurses. After 4500 hours of clinical nursing experience, the recommended education route is a **master's degree** in advanced nursing practice.

In Alberta, the following post-secondary institutions offer master's degree programs in nursing:

- **Athabasca University** offers a distance education program. Entrance requirements include a Canadian bachelor's degree in nursing or equivalent and at least two years of professional nursing experience. There are computer system requirements for this program.
- the **University of Alberta** in Edmonton. Entrance requirements include an average of at least 3.0 (based on a 4.0 system) in the last 10 full course equivalents of a bachelor's degree program in nursing, or equivalent, undergraduate courses in statistics and research methods, and at least one year of related clinical nursing experience.
- the **University of Calgary**. The entrance requirement is an average of at least 3.0 (based on a 4.0 system) in the last two years of full-time study of a bachelor's degree program in nursing, or equivalent, undergraduate courses in statistics and research methods, and at least three years of related clinical experience. The University of Calgary also has a post-master's Nurse Practitioner continuous learning initiative. Qualified applicants may be allowed to take the Master of Nursing program and the Nurse Practitioner program concurrently.

For information about bachelor's degree programs in nursing, see the Registered Nurse occupational profile.

Other Requirements

Under current legislation in Alberta, only members of the Alberta Association of Registered Nurses (AARN) on the nurse practitioner roster may call themselves or practice as a Nurse Practitioner.

Employment and Advancement

(section revised JANUARY 2006)

Nurse practitioners are employed in health care facilities such as hospitals and clinics. Many work in small or remote communities that do not have resident physicians.

Nurse practitioner is not an entry level position.

Nurse practitioners are part of the larger National Occupational Classification 3152: Registered Nurses. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 27,150 Albertans are employed in the Registered Nurses occupational group which is expected to grow 3.3 to 4.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since nurse practitioners form only a small part of the occupational group on which this forecast is based, only a small portion of the new positions created will be for nurse practitioners.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised JANUARY 2006)

Nurse practioners negotiate their own salaries which may range **up to $90,000 per year (2004 estimate).**

OCC info Alberta Occupational Profiles
Alberta Human Resources and Employment

Nursery Operator

Produced DECEMBER 2003

Nursery operators plan, organize and direct the activities of nursery staff who propagate, grow and market trees, shrubs and perennial plants.

NOC Number(s): 8254
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M S**

Duties

Nursery operators run wholesale and retail horticultural firms ranging in size from small family businesses to operations employing over a hundred people on a full-time or seasonal basis. They may deal with all kinds of trees and shrubs or specialize in a particular type. Their duties and responsibilities therefore vary but, in general, nursery operators:

- determine the varieties and quantities of trees, shrubs and perennials to grow
- determine the environmental conditions required to grow the plants selected and set planting and care schedules accordingly
- program irrigation control computers
- supervise staff in planting, transplanting, pruning, feeding and spraying trees and shrubs
- identify and control problems caused by insects, rodents, birds, diseases and weeds
- ensure the safe handling, use, storage and disposal of pesticides
- develop marketing plans
- provide customers with information on the selection and care of trees and shrubs
- order equipment and supplies and oversee equipment maintenance
- hire, train and supervise staff
- prepare budgets and maintain records.

In smaller operations, nursery operators may also perform some of the hands-on work in nurseries:

- prepare soil for planting
- set up and maintain irrigation systems
- construct greenhouses for seedlings
- plant seeds and cuttings, graft plants, transplant seedlings and rooted cuttings, and train and prune plants
- remove weeds, spray plants with pesticides and apply fertilizers
- dig, prune and transplant trees and shrubs
- prepare trees and shrubs for sale or shipment.

Working Conditions

Nursery operators work outdoors in fields and shade houses and indoors in greenhouses and offices. They often work long, irregular hours, particularly in the spring and summer months. The work can be hectic at times and satisfying customer needs can be stressful. Some of the hands-on work is strenuous; lifting up to 25 kilograms may be required.

Personal Characteristics

Nursery operators need the following characteristics:

- self-motivation and the ability to direct and motivate others
- decision-making skills
- manual dexterity
- no severe allergies to plants, tree pollen, pesticides or other chemicals
- patience

- an eye for detail.

Those in retail operations must also be able to deal courteously and effectively with the public.

Nursery operators should enjoy directing the work of others, organizing nursery operations and providing information to customers.

Educational Requirements

(section revised JULY 2004)

In the past, many nursery operators worked their way up to supervisory positions in greenhouses and nurseries by learning on the job and taking related courses. However, graduates of post-secondary education programs in horticulture have a better chance of advancing to supervisory and management positions than those who do not have related post-secondary education.

In Alberta, the following institutions offer horticulture-related programs:

- **Medicine Hat College** offers a one year Horticultural Technician certificate program with a specialization in production or ornamentals. The program includes two practicums and 120 hours of work experience. The entrance requirement is a high school diploma or equivalent with at least 55 per cent in Grade 12 English and Grade 11 math (pure or applied), biology and chemistry.
- the **Northern Alberta Institute of Technology** in Fairview offers a one year Horticulture Technician certificate program with a specialization in horticultural management. The program includes 16 weeks of work experience. The entrance requirement is a high school diploma with Grade 11 English, science and math.
- **Olds College** offers:
    - a two year Horticulture diploma program with a specialization in nursery/field production. The entrance requirement is a high school diploma or equivalent with at least 55 per cent in Grade 12 English, Chemistry 20, Biology 20, and Pure or Applied Math 20 (or equivalent).
    - a post-diploma Bachelor of Applied Horticulture degree program with a specialization in production horticulture. The entrance requirement is a diploma or degree in a closely-related area and at least four months of experience in the horticulture industry.
    - related distance education programs.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Short courses and workshops in horticulture are also offered by the following organizations:

- **Alberta Agriculture, Food and Rural Development** offers workshops at Crops Diversification Centres in the North (Edmonton) and South (Brooks)
- **Landscape Alberta Nursery Trades Association.**

Other Requirements

Depending on the type of operation, nursery operators who work with pesticides may require a Landscape Alberta Pesticide Applicator Certificate from the Pesticide Management Program at Lakeland College. Those who sell pesticides must hold a Pesticide Applicator Certificate or Commercial Pesticide Dispenser Certificate (or employ at least one staff member who has the appropriate certificate).

Employment and Advancement

(section revised JANUARY 2006)

Most nursery operators are self-employed or employed as retail or wholesale nursery managers. Some work for government departments and research centres.

Nursery operators generally start in junior positions and work their way up (or start their own businesses). Nursery worker positions may be full-time, part-time or seasonal. Advancement depends on performance and the availability of supervisory positions. Opportunities for advancement beyond the nursery operator level are limited.

Nursery operators are part of the larger National Occupational Classification 8254: Nursery and Greenhouse Operators and Managers. In Alberta, most people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Nursery and Greenhouse Operators and Managers occupational group, which is expected to 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since nursery operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for nursery operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings for nursery operators vary considerably, particularly for those who are self-employed.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Nursery and Greenhouse Operators and Managers occupational group earned **up to $66,000 a year**. Those with three years of experience earned from **$21,100 to $52,800 a year.** The average salary was **$29,200 a year**.

© Government of Alberta, Human Resources and Employment

Occupational Health and Safety Inspector

Produced MARCH 2005

Occupational health and safety inspectors visit places of employment to detect unsafe or unhealthy working conditions, and ensure compliance with laws and regulations governing workplace safety.

NOC Number(s): 2263
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Occupational health and safety inspectors employed by federal, provincial and municipal governments inspect a wide variety of workplaces (e.g. construction sites, offices, mines). They may specialize in inspecting a particular type of workplace but, in general, inspectors:

- conduct workplace inspections and enforce health and safety laws and regulations
- review and make decisions regarding situations where a worker has refused to work on the grounds that danger exists, or the work will cause danger to workers
- collect information and provide advice regarding the development of healthy and safe work practices
- encourage managers and employees to participate in occupational health and safety programs
- investigate workplace fatalities and serious injuries.

These duties require health and safety inspectors to have a thorough understanding of legislation relating to safety standards and some understanding of how to counsel and motivate people. Health and safety inspectors must also keep informed about changes in technology.

For information about health and safety officers employed by companies, see the Safety Officer occupational profile.

Working Conditions

Health and safety inspectors are usually responsible for a territory or specific industrial process. Working hours depend on the types of workplaces they inspect. Overtime may be required, particularly after an accident or a hazardous situation has been identified.

Although duties have to be carried out in the field, health and safety inspectors spend much of their time in offices located at central or regional headquarters. In the field, they are required to enter confined spaces, climb ladders and work in dusty conditions.

Personal Characteristics

Health and safety inspectors need the following characteristics:

- good communication skills, both in writing and in person
- mediation and conflict resolution skills
- the ability to remain open-minded and objective
- good health and physical fitness
- an outgoing personality.

They should enjoy having clear rules and organized methods for their work, analyzing information, and dealing with people.

Educational Requirements

There are **no standard education requirements** for health and safety inspectors. However, most inspectors have one or more of the following qualifications:

- a related college or technical institute diploma
- a university degree with a technical/science orientation (eg. engineering, toxicology, psychology, medicine)
- journeyman certification
- a safety professional designation (see below)
- extensive, related work experience.

Those already employed in safety-related positions may take related continuing education courses such as:

- the 325 hour Occupational Health and Safety Certificate program offered by the **University of Alberta** through the Faculty of Extension in the following locations: Edmonton, Red Deer (Red Deer College), Grande Prairie (Grande Prairie Regional College), Calgary and Fort McMurray (Keyano College). This evening study program can take from one to two years to complete and is designed for practicing and prospective health and safety inspectors. Applicants for the progam must be at least 21 years of age, have a high school diploma and have some experience in the work force.
- the Occupational Health and Safety certificate program offered by the **British Columbia Institute of Technology (BCIT)** in Burnaby, B.C. Students normally take two to five years to complete this distance education program.
- the Occupational Health and Safety distance education program offered by **Ryerson University** in Toronto.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Outside Alberta, the following institutions offer related full-time programs:

- **BCIT** offers a two year Occupational Health and Safety diploma program. The entrance requirement is a high school diploma with Grade12 English and math, and Grade 11 chemistry and physics. An interview is required. Preference is given to applicants who have completed the entrance requirements within five years prior to application.
- **Ryerson University** in Toronto offers a four year Bachelor of Applied Science degree program in occupational and public health. The entrance requirement for Alberta applicants is a high school diploma with an overall average of at least 70 per cent in five academic Grade 12 subjects (including English 30) and a minimum of 60 per cent in Chemistry 30 *or* Biology 30. Both sciences, as well as Physics 30 and Math 30 or 31 (or equivalent) are recommended. Ryerson also offers a two year program for applicants who already have a bachelor's degree from an accredited university.

Other Requirements

The Board of Canadian Registered Safety Professionals offers the designation Canadian Registered Safety Professional (CRSP) to applicants who have been employed as safety professionals for at least three years and have successfully completed an evaluation, interview and examination process.

Employment and Advancement

Occupational health and safety inspectors are employed by federal, provincial and municipal governments.

Advancement to management positions is usually through competition and depends on the individual's initiative, management skills, educational background and work experience.

Occupational health and safety inspectors are part of the larger National Occupational Classification 2263: Inspectors in Public and Environmental Health and Occupational Health and Safety. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**
- **Professional and Technical Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,100 Albertans are employed in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since occupational health and safety inspectors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for occupational health and safety inspectors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Inspectors in Public and Environmental Health and Occupational Health and Safety occupational group working part-time or full-time earned from **$18,300 to $172,300 a year.** The average salary was **$62,500 a year.**

Occupational Health Nurse

Produced SEPTEMBER 2004

Occupational health nurses are registered nurses who are employed by businesses to promote employee health, prevent disease and injury, provide first aid and nursing care when required, and facilitate the rehabilitation of sick or injured employees.

NOC Number(s): 3152.2
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: S M D

Duties

Duties and responsibilities vary from one position to another but, in general, occupational health nurses:

- provide health counselling and medical referral services for employees
- work with others in the organization to plan, implement and evaluate employee wellness programs (e.g. immunization programs, safety training, fitness programs)
- promote compliance with legislation and regulations related to health and safety and Workers' Compensation
- conduct health examinations
- facilitate disability case management to promote the early return to work of ill or injured employees
- assess work environments to identify health and safety hazards or work with an occupational health and safety team to keep work environments as safe as possible
- provide emergency care as needed in the workplace and arrange for further care if necessary
- collect and assess data (e.g. incidents of illness, injury) to identify trends and evaluate the effectiveness of safety or wellness programs
- prepare accident reports and maintain records
- keep employee records confidential.

Occupational health nurses also may:

- design and lead health safety and wellness training programs
- treat non-occupational injuries and minor illnesses
- conduct testing or screening programs (e.g. audiometric testing, drug testing, blood pressure screening)
- assess potential employees' physical and emotional capacity to safely perform particular jobs.

Working Conditions

Occupational health nurses may work in hospital, government, school or industrial environments. They usually work standard weekday office hours although, in industrial environments, they may be required to work shifts that include evening or weekend hours. Some travel may be required in organizations that have multiple locations.

Nurses often are exposed to contagious diseases and routinely lift items weighing up to 10 kg.

Personal Characteristics

Occupational health nurses nurses need the following characteristics:

- problem solving and critical thinking abilities
- good verbal and written communication skills
- organizational skills
- good judgment and the ability to make decisions quickly, especially in stressful situations
- patience, understanding and a caring attitude
- flexibility, humour and enthusiasm
- the ability to lead and work co-operatively with others

- the interpersonal and negotiation skills required to settle disputes.

They should enjoy working with and consulting others, systematically compiling information for records, operating medical equipment, and caring for ill or injured employees.

Educational Requirements

Occupational health nurses are registered nurses who have additional education in the field of occupational health. In Alberta, registered nurse status requires a **diploma or bachelor's degree in nursing**. For information about diploma and degree programs in nursing, see the Registered Nurse occupational profile.

Employers generally prefer to hire registered nurses who have:

- at least five years of general nursing experience
- advanced first aid certification or other job-related certification (e.g. instructor certification to teach first aid, audiometric certification)
- a certificate in occupational health nursing from a post-secondary education institution, a Canadian Occupational Health Nursing Certificate from the **Canadian Nurses Association**, or other related post-secondary education (e.g. courses in management, research, toxicology, disability management, audiometry or spirometry).

Grant MacEwan College in Edmonton offers the only Occupational Health Nursing certificate program in Alberta. Applicants must be eligible for registration as a registered nurse and have successfully completed the course NURS -340: Health Assessment or equivalent. This is an individualized program offered through distance learning or home study.

Other Requirements

(section revised OCTOBER 2004)

Under the current legislation governing registered nurses in Alberta, the Nursing Profession Act and associated regulations, only registered members of the Alberta Association of Registered Nurses (AARN) may call themselves or practice as a Registered Nurse.

Employment and Advancement

(section revised JANUARY 2006)

Occupational health nurses are employed by large corporations, government departments, industry associations and occupational health consulting firms. Some self-employed nurses provide services for several organizations on a contract basis.

Experienced occupational health nurses may advance to supervisory or management positions responsible for employee wellness programs.

Occupational health nurses are part of the larger National Occupational Classification 3152: Registered Nurses. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 27,150 Albertans are employed in the Registered Nurses occupational group which is expected to grow 3.3 to 4.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since occupational health nurses form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for occupational health nurses.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Incomes for occupational health nurses vary depending on the employer and the nurse's hours, educational qualifications, experience and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Occupational Health Nurses occupational group earned **up to $87,300 a year.** Those with three years of experience earned from **$38,900 to $74,100 a year.** The average salary was **$72,700 a year.**

Occupational Hygienist

Produced MARCH 2005

Occupational hygienists study, anticipate and evaluate hazards and stresses in workplaces, suggest changes to work environments and processes, and provide information to managers and workers on ways to reduce the risk of injury or illness from occupational hazards.

NOC Number(s): 4161.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

Occupational hygienists check work environments and processes for:

- chemical agents (e.g. dust, gases, vapours)
- physical agents (e.g. heat, cold, noise, radiation)
- biological agents (e.g. viruses, bacteria, molds)
- hazards related to musculo-skeletal disorders (e.g. repetitive work, poor equipment design, heavy work).

Specific duties and responsibilities may vary considerably from one job to another. In general, however, occupational hygienists:

- observe processes, procedures and operating conditions both inside and outside work sites
- develop strategies for evaluating the work site to determine the degree of risk
- collect and analyze samples to assess worker exposure to physical, chemical and biological agents
- use direct reading instruments, sampling techniques and other methods to measure levels of light, heat, noise and radiation
- determine airborne exposure concentrations of contaminants and compare them to regulatory standards and guidelines and accepted occupational exposure criteria
- evaluate the effectiveness of control strategies implemented to protect against workplace exposures and hazards (e.g. personal protective equipment, ventilation systems)
- interpret the results of exposure evaluations and determine risk to human health based on scientific research
- work with other scientists, engineers and professionals to design control measures, and consult with physicians regarding occupational health effects
- report and document investigations, audits and conclusions
- recommend ways to control workplace hazards through engineering methods, improved work procedures and protective equipment
- work with occupational health and safety committees.

Occupational hygienists also may:

- design, implement and manage occupational hygiene programs
- advise managers and employees about regulations, standards, legal compliance, risk assessment and ways to reduce risk
- teach safe work procedures
- prepare and review material safety data
- interpret the results of surveys to assess the degree of risk and determine requirements for remedial action
- review product and process design to minimize risk of injury or illness
- work on environmental health and exposure issues
- participate in emergency response planning by providing information on health hazards, protective equipment and work procedures to help protect emergency response personnel and the public
- conduct investigations into apparent work-related health problems

- develop and implement standards for health and safety management systems
- testify at hearings (eg. Workers' Compensation Board hearings, environmental pollution hearings)
- report important findings at scientific conferences or in scientific journals.

Working Conditions

Work environments and hours vary tremendously in this occupation. Occupational hygienists work in offices, laboratories and industrial plants (which may operate 24 hours a day). They must wear protective gear when observing work processes in industrial plants or conducting tests. In some cases, the work may involve climbing ladders or accessing industrial plant equipment in confined spaces. Travel to remote facilities is often required.

Personal Characteristics

Occupational hygienists need the following characteristics:

- good oral and written communication skills
- the intellect, patience and perseverance required to solve complex problems
- the ability to think quickly and act decisively when a situation requires it
- an even temperament combined with tact and confidence
- commitment to worker health and safety
- the ability to establish rapport with all kinds of people.

They should enjoy exploring problems in depth, consulting with others and taking a methodical approach to their work.

Educational Requirements

The minimum academic requirement for occupational hygienists is a **four year university degree related to occupational hygiene** (in the environmental, physical, chemical or health sciences, or engineering). Most occupational hygienists start with a bachelor's degree in science or engineering, then take further education specifically related to occupational hygiene (e.g. a master's degree or university certificate in occupational hygiene or health and safety).

Suitable four year bachelor's degree programs are offered by post-secondary institutions throughout Alberta. Admission requirements vary but generally include a high school diploma with a minimum average (ranging from 60 to 80 per cent depending on the program) in English Language Arts 30-1 or English 30, and four other appropriate Grade 12 subjects (e.g. 30 level math and science courses).

Many post-secondary institutions offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Ryerson University in Toronto offers the only four year undergraduate degree program in Canada with a specialization in Occupational Health and Safety.

Related graduate programs are offered by:

- **Dalhousie University**, Sexton Campus, Nova Scotia (certificate program)
- **McGill University** in Montreal (graduate degree programs)
- the **University of Alberta** (certificate program offered at locations throughout the province)
- the **University of British Columbia** in Vancouver (graduate degree programs)
- the **University of New Brunswick** (online certificate program)
- the **University of Toronto** (graduate degree programs)
- the **University of Victoria** (distance education certificate program).

Other Requirements

Certification is voluntary in Alberta. Two organizations offer certification for occupational hygienists:

- Registration with the Canadian Registration Board of Occupational Hygienists (CRBOH) confers the right to use the title Registered Occupational Hygienist (ROH) or Registered Occupational Hygiene Technologist (ROHT).
- Registration with the American Board of Occupational Hygiene (ABIH) confers the right to use the title Certified Industrial Hygienist (CIH) or Certified Associate Industrial Hygieinist (CAIH).

Applicants for these designations must have a suitable combination of education and work experience, and pass a qualifying exam.

Employment and Advancement

(section revised JANUARY 2006)

Occupational hygienists work for:

- industrial plants
- governments
- consulting firms
- public utilities
- insurance companies
- hospitals
- labour unions
- educational and research institutions.

Experienced occupational hygienists may be promoted to management positions or set up their own consulting firms. Advancement for those who have doctoral degrees generally takes the form of salary increases, more demanding research responsibilities or senior management positions.

Industry and government often work co-operatively on health and safety issues. Opportunities exist for occupational hygienists to work on industry-wide and even international projects through industry groups.

Occupational hygienists are part of the larger National Occupational Classification 4161: Natural and Applied Science Policy Researchers, Consultants and Program Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- changes in occupational health and safety legislation
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,600 Albertans are employed in the Natural and Applied Science Policy Researchers, Consultants and Program Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since occupational hygienists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for occupational hygienists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Natural and Applied Science Policy Researchers, Consultants, and Program Officers occupational group working part-time or full-time earned from **$17,600 to $116,200 a year.** The average salary was **$61,500 a year.**

Occupational Therapist

Produced FEBRUARY 2005

Occupational therapists help people whose capabilities have been impaired by physical or mental illness or injury, emotional or developmental problems, or the aging process to improve their ability to function in everyday life. They assist people in caring for themselves, returning to work and resuming community activities.

NOC Number(s): 3143
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S I M**

Duties

Occupational therapists identify, plan and implement client-centred programs to enhance clients' abilities to care for themselves and participate in all aspects of life (work, school, recreation). In general, this involves:

- evaluating each client's level of functioning in areas of self-care, productivity and leisure
- developing intervention programs
- monitoring client progress, evaluating outcomes and changing programs as needed
- making recommendations, as an independent consultant or in conjunction with a multi-disciplinary team of professionals, regarding client discharge, home or school management, transfer to alternate programs, integration into the community or return to work.

Intervention programs may include:

- environmental changes that help clients perform daily tasks
- purposeful occupations (meaningful activities) that help clients restore or maintain function and prevent disability
- orthotic devices or splints that position, protect and support injured limbs or help clients regain normal movement
- vocational assessment and retraining that develops or improves work-related skills
- self-help strategies that train or retrain clients in daily living activities
- health promotion and disability prevention strategies
- group activities or discussions that facilitate social adjustment, alleviate stress through self management techniques and promote client well being by providing choices.

For example, occupational therapists may:

- teach clients new ways to perform daily chores, manage their finances and shop for groceries
- help clients develop skills to cope with anxiety, substance (drug or alchohol) abuse, stress, decreased energy or normal aging
- work with parents, teachers and other professionals to help children achieve success at home, in school and in the community
- adapt evironments in schools, homes, workplaces and communities to assist people in their daily living (e.g. by changing the layout of a home to make it more accessible or help prevent further injury)
- help clients regain the use of an injured body part or improve strength, endurance, movement and self-confidence
- use assistive technologies such as mobility devices and safety equipment to promote participation in meaningful activities.

Working Conditions

Occupational therapists usually work standard office hours although some positions require evening and weekend work. In clinical settings, they may spend much of their working day standing, bending and assisting patients. Lifting (up to 25 kilograms or more) may be required in some employment settings.

Personal Characteristics

Occupational therapists need the following characteristics:

- excellent problem solving abilities
- good organizational skills
- good interpersonal skills
- the ability to communicate well in person and in writing
- the ability to work with little supervision
- creativity
- empathy.

They should enjoy working with people, finding innovative ways to deal with challenges and taking a methodical approach to their work.

Educational Requirements

The current minimum education requirement is a bachelor's degree in occupational therapy or equivalent. However, the **Canadian Association of Occupational Therapists (CAOT)** has announced that, as of 2008, it will only grant academic accreditation to occupational therapy programs that lead to a master's degree in occupational therapy.

In Alberta, the **University of Alberta** in Edmonton offers a Bachelor of Science in Occupational Therapy (B.Sc.O.T.) degree. The degree requires two years of pre-professional studies at the university level and two years of course work in the Faculty of Rehabilitation Medicine that include a thousand hours of field work in accredited facilities. Prior to their final year, students who have a previous degree and sufficiently high standing in the B.Sc.O.T. program may apply for transfer to a course-based master's program.

74 students are admitted to the Occupational Therapy program each year, of which 64 students are Alberta residents. Two positions are available to applicants of Aboriginal ancestry. The applicant selection process is competitive and preference is given to applicants who have completed three credits each in psychology, sociology, statistics, interpersonal communication and introductory human anatomy, and six credits in physiology. Students planning their university studies are strongly advised to consult the University of Alberta calendar or website for more detailed information about course requirements.

Post-secondary institutions throughout the province offer one year and two year university tranfer programs. Admission requirements vary but generally include a high school diploma or equivalent with a minimum average (ranging from 60 to 80 per cent depending on the program) in English 30 and four other appropriate 30-level subjects. Math and science courses are recommended for students planning to go on to study occupational therapy.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Occupational Therapy Profession Act and General Regulation, only registered members of the Alberta Association of Registered Occupational Therapists (AAROT) who hold a practice permit may call themselves an Occupational Therapist.

Employment and Advancement

(section revised JANUARY 2006)

Occupational therapists may work in private practice or be employed in:

- general, psychiatric, convalescent or children's hospitals
- rehabilitation centres
- Workers' Compensation Board centres
- home care
- community rehabilitation programs
- alcohol and drug addiction clinics
- continuing care facilities
- schools
- universities

- regional health authorities
- homes, group homes and lodges
- mental health care facilities
- community mental health agencies
- industrial settings
- sheltered workshops
- vocational assessment units
- insurance companies.

Occupational therapists are employed in community programs and private practice where they may offer a services such as medical/legal evaluations. Those who are self-employed often provide consulting services for various levels of government.

In Alberta, over 75 per cent of people employed as occupational therapists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,250 Albertans are employed in the Occupational Therapists occupational group which is expected to grow 3.3 to 4.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Occupational Therapists occupational group working part-time or full-time earned from **$23,100 to $71,600 a year.** The average salary was **$56,200 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Occupational Therapist Assistant

Produced DECEMBER 2004

Occupational therapist assistants help occupational therapists implement treatment programs that are designed to develop, improve or maintain clients' abilities to function independently.

NOC Number(s): 3414.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S o**

Duties

Occupational therapist (OT) assistants support occupational therapists in their work with clients whose abilities to function and adapt have been impaired by illness or injury, emotional disorders, developmental disorders, social disabilities or the process of aging. Clients range in age from infants to the elderly.

Working under the supervision of occupational therapists, OT assistants:

- gather relevant materials in preparation for client treatment and education
- implement treatment plans designed by occupational therapists for individual clients and groups
- observe and document client behaviour, and report to the supervising therapist
- prepare, clean, maintain, adjust and make minor repairs to equipment
- maintain inventories, and order supplies and equipment
- schedule appointments and collect statistics
- maintain and promote a positive attitude toward clients and their treatment programs
- help clients learn skills needed for daily living (self-care, productivity and leisure)
- assist in completing splints and creating or repairing assistive devices
- assist in making adaptations to seating for clients
- assist in educating clients regarding joint protection techniques and energy conservation.

For example, an occupational therapist assistant may:

- guide a child with co-ordination problems in a game that teaches skills needed for dressing and undressing
- help someone who has arthritis practice using specially designed tools for cooking and cleaning
- help someone who has mental health problems to practice and gain confidence in community living and social skills.

Working Conditions

Most occupational therapist assistants work in settings related to health care. To avoid injury, they must use proper methods for lifting items that may weight up to 25 kilograms and handling clients and equipment.

Most assistants work daytime hours, although their hours can vary. In some environments, evening and weekend work is required.

Personal Characteristics

Occupational therapist assistants need the following characteristics:

- physical and mental fitness
- patience, tact and flexibility
- good observation skills
- good organizational skills
- sensitivity to clients' feelings and needs
- the interpersonal skills required to work effectively with people of various ages who may be under physical or emotional stress

- the ability to follow directions and work as part of a team
- the creative and manual skills required for activities such as crafts, music, carpentry and sewing
- good oral and written communication skills
- the strength and stamina required to assist people who have disabilities.

They should enjoy having clear guidelines for their work, helping people individually and in groups, and handling and maintaining equipment and supplies.

Educational Requirements

(section revised APRIL 2005)

Employers generally require applicants for occupational therapist assistant positions to be graduates of occupational therapist assistant diploma programs or have an equivalent combination of education and experience.

In Alberta, the following institutions offer therapist assistant programs:

- **Grant MacEwan College** in Edmonton offers a two year Therapist Assistant diploma program that prepares graduates for work as an occupational therapist assistant or physical therapist assistant (or both). Applicants must have a high school diploma or equivalent with an average of at least 65 per cent in English 30, Biology 30, Chemistry 30 or Science 30, and two other Grade 12 subjects.
- **Medicine Hat College** offers a two year Occupational Therapy Assistant diploma program onsite and by distance education. Applicants must have a high school diploma or equivalent with at least 60 per cent in English 30, Biology 30, and two other 30 or 33-level subjects, one of which must be a 30-level science or math. Students must have obtained a current Basic CPR Certficate (BCLS), a Standard First Aide Certificate and updated immunizations.
- The **Southern Alberta Institute of Technology** in Calgary offers a 14 month Rehabilitation Therapy Assistant certificate program via an alternate delivery model. Students take a core curriculum for the first two semesters (September - April) and then branch into one of two areas: occupational therapist assistant or physical therapist assistant. Applicants must have a high school diploma or equivalent with an overall average of at least 60 per cent in English 30, Biology 30 and Chemistry 20. Applicants also must be able to demonstrate a level 8 in the Canadian Language Benchmarks Assessment (available through SAIT). Basic CPR, a standard first aid certificate and updated immunization are required prior to the first practicum placement.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Occupational therapist assistants are employed by:

- regional health authorities (hospitals, rehabilitation centres)
- schools
- home care programs
- continuing care centres
- mental health agencies and institutions
- vocational rehabilitation programs
- private practices.

Opportunities for advancement are limited.

Occupational therapist assistants are part of the larger National Occupational Classification 3414: Other Assisting Occupations in Support of Health Services. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,100 Albertans are employed in the Other Assisting Occupations in Support of Health Services occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since occupational therapist assistants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for occupational therapist assistants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Assisting Occupations in Support of Health Services occupational group working part-time or full-time earned from **$11,900 to $58,200 a year.** The average salary was **$23,700 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Oceanographer

Produced OCTOBER 2005

Oceanographers study all aspects of oceans including their boundaries, contents and role in the earth's climate system.

NOC Number(s): 2113
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Oceanographers work in a variety of fields such as:

- mining and petroleum production
- fisheries and food production
- ocean forecasting and climatology
- sea ice studies and ice forecasting
- transportation
- remote sensing
- ecology
- environmental studies
- climate studies and modelling
- recreation
- academic research
- national defence.

They may specialize in:

- **biological oceanography** - studying plant and animal life in the oceans including distribution, abundance, productivity, cycles and interdependence with the chemistry of the oceans. Practical applications of biological oceanography include marine ecology food production, fisheries management, environmental impact assessment and aquaculture (e.g. oyster, shrimp, salmon farming).
- **chemical oceanography** - studying the occurence and movement of chemicals in the ocean, the effects of contaminants on marine life and the chemical processes operating in the ocean, sea floor and marine atmosphere. Practical applications include pollution control, studies of the role of oceans in atmospheric chemistry and global climate change, and assessments of the quality of fish and fish products.
- **geological oceanography** - mapping the ocean floor, examining rocks, sediment, core samples and fossils, and conducting seismic surveys. Practical applications include offshore oil and gas exploration, sea-bed mining and coastal erosion or sediment accumulation.
- **physical oceanography** - studying the temperature and density of seawater, tides, waves, currents, ice conditions, ocean turbulence and sediment transport. Practical applications include charts of ocean properties (e.g. temperature, salinity, currents), forecasts of wave heights and distribution of marine polutants, and computer models of ocean climate (currents, temperature and density structure). Models of global ocean conditions assist in weather forecasting and predicting climate changes.

In general, oceanographers in all disciplines:

- plan and execute investigations
- record the details of experiments and expeditions
- develop and test theories and models
- prepare papers and reports
- respond to criticisms of their conclusions
- help establish policy on coastal and marine environments and resources, and manage related human activities.

Working Conditions

In the course of their work, oceanographers use surface ships, aircraft, satellites, underwater craft and a variety of specialized scientific equipment. Since field research is normally conducted from ocean-going vessels, field oceanographers may spend up to three months a year on ships. They may be expected to share a cabin with another person and may have to work long hours to complete research projects.

Physical requirements vary. When conducting field research, oceanographers may be required to lift items weighing over 25 kilograms. On the other hand, oceanographers who work primarily in office environments, concentrating on theoretical issues or computer modelling, may do minimal lifting.

Personal Characteristics

Oceanographers need the following characteristics:

- an inquiring mind and aptitude for the physical sciences
- analytical and problem-solving abilities
- the ability to apply theoretical concepts and analyze large volumes of information
- the ability to work alone or co-operatively as a member of a team
- the ability to express ideas clearly orally and in writing.

Field oceanographers should be physically fit and not be prone to severe sea sickness.

All oceanographers should enjoy co-ordinating information and solving problems, working with tools, instruments and equipment at tasks requiring precision, and consulting with others.

Educational Requirements

Oceanographers must have a **master of science (M.Sc.) or doctoral (PhD) degree in oceanography.** Graduates of bachelor of science (B.Sc.) degree programs may work as research/laboratory assistants/technicians who provide technical support.

The admission requirement for a M.Sc. degree program in oceanography is an acceptable average in either of the following:

- a B.Sc. degree program that includes course work in mathematics, physical sciences, chemistry, geology, biology or atmospheric sciences
- an engineering degree program with course work related to oceanography.

There are no Bachelor's degree programs in oceanography offered in Alberta but the **University of Alberta** in Edmonton, the **University of Calgary** and the **University of Lethbridge** do offer a variety of science and engineering degree programs that may include courses offered in conjuction with the University of British Columbia and Simon Fraser University at the Western Canadian Universities Marine Biological Station, Bamfield, Vancouver Island. Entrance requirements vary depending on the institution and program but generally include a competitive average in English Language Arts 30-1 or English 30, and four 30 level mathematics and science courses.

In western Canada, the following institutions offer programs in oceanography:

- The **University of British Columbia** in Vancouver offers programs leading to B.Sc., M.Sc. and PhD degrees in oceanography. The B.Sc. program is a combined honours program in oceanography and another science.
- The School of Earth and Ocean Studies at the **University of Victoria** offers a Bachelor of Science (B.Sc.) honours program with a combined major in physics and ocean sciences, and M.Sc. and PhD programs in earth and ocean sciences.

The University of Alberta offers graduate (master's and PhD) degree programs in physical oceanography. Elsewhere in Canada, **McGill University** in Montreal, **University of Quebec** in Rimouski (instruction in French), **Dalhousie University** in Halifax and **Memorial University of Newfoundland** in St. John's offer graduate degree programs in oceanography.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Oceanographers are employed by:

- universities

- federal government laboratories
- private companies
- Canadian Defence Research establishments
- marine science institutions.

Some oceanographers work as private consultants. Most oceanographers are located in coastal cities. Experienced oceanographers may move into international positions (e.g. work for the United Nations as advisors or consultants).

Oceanographers also may work in related aspects of marine science such as aquaculture, environmental science, fisheries biology, marine biology and ecology, meteorology, hydrology, geophysics or ocean data management.

Oceanographers are part of the much larger National Occupational Classification 2113: Geologists, Geochemists and Geophysicists. In Alberta, most people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,350 Albertans are employed in the Geologists, Geochemists and Geophysicists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since oceanographers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for oceanographers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geologists, Geochemists and Geophysicists occupational group working part-time or full-time earned from **$37,900 to $159,600 a year.** The average salary was **$71,700 a year.**

Office Equipment Technician

Produced APRIL 2005

Office equipment technicians take apart, clean and repair business machines such as photocopiers, facsimile (fax) machines and laser printers.

NOC Number(s): 2242
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O I M

Duties

Office equipment technicians may specialize in one type of machine or work on a variety of machines.

Technicians employed by **business machine manufacturers and dealers** typically service only the brands of equipment offered by their companies. They routinely visit customers who have service contracts to:

- inspect machines for unusual wear
- replace worn or broken parts
- trouble-shoot problems with equipment and networks
- advise customers on the proper use of the equipment and how to spot potential problems
- clean, oil and adjust machines to ensure optimum operation.

When breakdowns occur, office equipment technicians must respond quickly. They determine the cause of the malfunction and repair or replace the machine so the office routine is disrupted as little as possible.

Office equipment technicians employed by **small independent repair organizations** must be able to repair a number of different types of business machines. In general, they:

- take machines apart
- replace broken parts
- re-assemble machines
- make adjustments.

Working Conditions

Office equipment technicians often work in office environments where they are expected to wear business clothes. They use various electronic meters and other electrical testing equipment as well as hand tools such as pliers and screwdrivers. Travelling from one service call to another and some lifting (up to 10 kilograms) may be routinely required. There are few hazards in the occupation, although the work can be stressful when customers are impatient.

Office equipment technicians usually work standard office hours. Some technicians are required to be on call for after-hours emergency repairs. In some jobs, out-of-town travel is required.

Personal Characteristics

Office equipment technicians need the following characteristics:

- good manual dexterity
- mechanical and problem solving abilities
- the ability to see small, delicate parts
- the ability to detect small changes in colour
- good hearing to detect the sources of malfunctions.

Since technicians are often the only representatives of their companies that office personnel meet, they must have excellent communication and customer relations skills.

They should enjoy using tools, instruments and equipment to perform tasks requiring precision, analyzing information and diagnosing problems, and taking a methodical approach to their work.

Educational Requirements

Most office equipment technicians are **trained on the job.** However, employers generally prefer to hire people who already have:

- basic computer skills and a good understanding of electronic and electrical systems (i.e. graduates of electronics courses or programs, or people who have previous experience with electronics and mechanical repair)
- good customer service skills.

Some employers require employees to have a vehicle and a valid driver's licence. Employees who work on banking machines must be bondable (acceptable to an insurance company as a responsible, law-abiding person).

There are no post-secondary education programs specifically designed to train office machine technicians. For information about electronics-related programs in Alberta, see the Electronic Technician and Electronics Engineering Technologist occupational profiles.

Trainees employed by manufacturers or franchised dealers may be sent for special training programs or learn about equipment repair techniques via computer-based training packages. Those employed in repair shops learn from working with experienced office equipment technicians and may take self-study courses.

Once trained, office equipment technicians must continuously upgrade their skills and knowledge to keep up to date.

Employment and Advancement

(section revised JANUARY 2006)

Office machine technicians are employed by:

- firms that sell or service business machines
- equipment manufacturers
- independent repair shops
- organizations large enough to have on-staff maintenance and repair crews.

Experienced office equipment technicians may advance to supervisory, management or training positions, or open independent repair shops of their own.

Office equipment technicians are part of the much larger National Occupational Classification 2242: Electronic Service Technicians (Household and Business Equipment). In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Management, Administrative and Other Support Services**
- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**
- **Wholesale Trade**
- **Educational Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 10,650 Albertans are employed in the Electronic Service Technicians (Household and Business Equipment) occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 200 to 310 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since office equipment technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for office equipment technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for office equipment technicians vary depending on the type of equipment they service. Hourly wages for **entry level** positions generally range from **$10 to $12 per hour (2005 estimate).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electronic Service Technicians (Household and Business Equipment) occupational group working part-time or full-time earned from **$14,200 to $81,100 a year.** The average salary was **$44,200 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

© Government of Alberta, Human Resources and Employment

Oil and Gas Well Loggers and Testers

Produced AUGUST 2005

Oil and gas well loggers and testers operate specialized tools, instruments and equipment to provide services related to oil and gas well drilling, completion and servicing.

NOC Number(s): 8232.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Oil and gas well loggers and testers, and their helpers, work in close co-operation with drilling and service rig crews. In general, loggers and testers:

- perform requested tests
- provide services designed to solve specific types of problems
- direct the related activities of helpers and drilling or service rig crew members.

Hydrocarbon mud loggers, also called hydrocarbon data analysts, analyze mud from the well to obtain information about rock formations. In general, they use instruments to:

- identify formation characteristics and qualities (from cuttings in the mud returning from down-hole drilling)
- determine whether or not traces of oil or gas are present in the mud
- analyze gases carried to the surface in drilling mud.

Mud logging results help to determine drill bit selection and drilling rates, and may indicate a need for core sampling or drill stem testing.

Coring operators take core samples that are analyzed by geologists, geophysicists and engineers to provide additional information about subsurface geology (to determine the potential productivity of a well). In general, coring operators:

- choose and deliver the special bits required to obtain core samples
- direct drillers in core sample operations
- box and record samples for the well site geologist or to send to the operating company or a laboratory for evaluation.

Drill stem testers perform tests on the fluid in rock formations to help determine the potential productivity of an oil or gas well. With assistance from their helpers, they:

- drive trucks with the testing equipment to and from drilling sites
- assemble and dismantle testing tools
- supervise the activities of rig crews who operate the rig equipment that lowers the testing tools into the well.

Drill stem testers who are also qualified to use equipment that pressure tests casing or tubing for leaks may be called pressure testers.

Wireline operators lower special instruments or tools into wells on a slender, flexible, metal cable called a wireline. They lower special instruments such as:

- complex electrical logging equipment
- perforating guns which, when detonated, perforate well casing and permit oil and gas to flow into the well
- special tools and equipment used to retrieve broken or lost drilling or production equipment.

In general, wireline operators:

- drive wireline trucks to and from drilling sites
- assemble and attach the special instruments or tools required for the job
- operate the winch from the truck to lower and raise the instruments or tools.

Precise positioning of the equipment is necessary to ensure that the job is done safely and properly. Wireline operators carefully follow the directions of field supervisors who work from mobile units that house complex computer equipment.

Working Conditions

Oil and gas well loggers and testers are usually on call 24 hours a day. They often work long hours and are always under pressure to complete their work so the rig can continue its regular activity. The work environment around a rig is noisy, dirty and hazardous. The work may require lifting tools and equipment weighing up to 25 kilograms.

Hydrocarbon mud loggers work primarily in small laboratories on site during drilling operations. Coring operators, drill stem testers and wireline operators work mostly outdoors, sometimes in adverse weather conditions.

Personal Characteristics

Oil and gas well loggers and testers need the following characteristics:

- physical strength and stamina
- good communication skills
- emotional stamina
- the ability to work well under pressure.

They should enjoy working with equipment and machinery, having clear rules and guidelines for their work, and compiling information and solving problems.

Educational Requirements

Most loggers and testers are **trained on the job**. There is no minimum education requirement but many employers prefer to hire high school graduates. Related courses (e.g. in math, chemistry, geology, electronics or mechanics) and experience working on drilling or service rigs are definite assets.

It is possible to gain technical knowledge and advance more quickly by taking courses in different aspects of drilling or service operations. **Enform** (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and Nisku (near Edmonton) offers courses for those employed on drilling and service rigs as well as pre-employment courses for those wanting to gain experience prior to working in the oil and gas industry.

Wireline operators must:

- have a heavy truck driver's license (Alberta Class 3) and air brake certification
- be licensed by the provincial government before they are allowed to handle the types of explosives used in perforating activities
- be certified in the transportation of dangerous goods (TDG)
- be trained in first aid.

Employment and Advancement

(section revised JANUARY 2006)

Oil and gas well loggers and testers are employed by oil field service companies. New employees usually begin as helpers or junior operators and often are hired initially as seasonal workers for the winter months. Opportunities to advance to more senior positions depend on the company and the worker's ability and potential to assume responsibility and supervise operations. For more information, see the Well Testing Services Supervisor profile on the Trade Secrets website.

Wireline operators may develop special expertise in areas such as electrical logging or perforating, or they may move into field stations and work as mechanics. Advancement to a wireline field supervisor position requires additional education (for more information, see the Wireline Field Supervisor occupational profile).

Oil and gas well loggers and testers are part of the larger National Occupational Classification 8232: Oil and Gas Well Drillers, Servicers, Testers and Related Workers. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 17,600 Albertans are employed in the Oil and Gas Well Drillers, Servicers, Testers and Related Workers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 440 to 620 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since oil and gas well loggers and testers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for oil and gas well loggers and testers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for loggers and testers vary greatly depending on their specialty and the individual's experience and level of training. Salaries usually include a base rate plus field bonus.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Well Drillers, Servicers, Testers and Related Workers occupational group working part-time or full-time earned from **$17,800 to $157,000 a year.** The average salary was **$55,100 a year.**

Oil Pipeline Operators and Maintenance Workers

Produced AUGUST 2005

Oil pipeline operators and maintenance workers monitor and conduct the day to day operations of oil pipelines and associated facilities.

NOC Number(s): 9232
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I d**

Duties

Oil pipeline operators and maintenance workers ensure that pipeline systems operate safely, efficiently and reliably. Pipeline systems transport oil and oil products via:

- flow lines that connect oil wells to oil batteries (storage facilities)
- pipeline gathering systems that connect production fields to main pipelines
- main pipeline transmission lines that carry oil from major points of production to refineries or to other markets.

Workers' responsibilities vary from one company to another. In general, however, oil pipeline maintenance workers:

- check the equipment (pumps, motors, valves, traps) at pumping stations and related sites
- co-ordinate operations with control centre operators
- monitor the quality of the products shipped
- make adjustments to the equipment
- respond to problems when they occur along the pipeline system.

Although their overall duties are similar, different types of oil pipeline maintenance workers have different levels of responsibility.

In some companies, **tank farm operators** are employed at pumping stations, usually located near tank farms (large storage facilities for oil and oil products). From control rooms, they:

- monitor instruments that provide information about product levels in storage tanks and the flow rates, pressures, volumes, densities and temperatures of products being shipped
- operate computers that remotely control valves, product separation and pumps
- direct the work of gaugers and utility workers (described below)
- monitor the work of contract personnel while at the tank farm and pumping station
- check various areas of the pumping station to ensure proper and safe operation
- may check remote pumping stations.

Tank farm operators report directly to station supervisors and are expected to assume supervisory responsibilities when station supervisors are absent.

In other companies, **control centre operators** monitor and control pipeline activities for large regions (e.g. all of Alberta and British Columbia) from one centralized control centre. From control rooms, they:

- monitor operations including flow and product quality measures, storage levels, line balance and leak detection
- operate control valves, block valves, product separation and pumps
- provide information to gaugers, maintenance and other personnel.

Other pipeline workers, often called gaugers and utility workers, may work at pumping stations. In general, **gaugers:**

- make routine checks of the pumping station or remote stations
- take readings and make necessary adjustments
- keep detailed records of oil flow, temperature, density and pressure in the pipeline
- take samples of crude to evaluate quality
- take precise readings from meters
- send and receive pipeline scrapers

- maintain equipment
- determine month end tank inventories
- may prepare calculations for receipts and deliveries of oil and oil products.

Under direct supervision, gaugers also may:

- route the correct product to the pumps from the tanks
- check to see that incoming and outgoing products are moving through the correct meters and that meters are working properly
- take samples of various products
- conduct simple laboratory tests to check product quality and grade.

Utility workers work closely with gaugers and assist them with their work. As they gain experience, utility workers are usually given more responsibility and, after two or three years, may advance to gauger positions. In addition to their work with gaugers, utility workers are responsible for general maintenance, housekeeping in the pumping station (washing walls, cleaning floors) and general site safety.

Working Conditions

Pipeline systems operate 24 hours a day, year round, so control centre operators may work eight or 12 hour shifts. They usually work in an office type of environment. Other workers may work eight hour day shifts.

Utility workers and gaugers work both indoors and outdoors in all types of weather conditions. They are required to lift items weighing up to 25 kilograms.

All pumping station personnel must be acquainted with safety procedures associated with handling oil and oil products.

Personal Characteristics

Oil pipeline operators and maintenance workers need the following characteristics:

- precise
- flexible
- good communication skills
- able to work effectively as a member of a team.

In an emergency, oil pipeline operators must be able to evaluate the situation and respond to it quickly and correctly. The safety of a number of people and the efficient operation of the oil pipeline system often depend on their good judgement. Control centre operators also need good colour vision to interpret colour computer graphics.

Oil pipeline operators and maintenance workers should enjoy controlling equipment, instruments and machinery, analyzing information to solve problems, and working with others.

Educational Requirements

Oil pipeline operators and maintenance workers usually require at least a high school education and a valid driver's license. Employers prefer to hire applicants who have related post-secondary education/training or experience in:

- safety, first aid and CPR
- WHMIS (Workplace Hazardous Materials Information System)
- mechanics
- electrical work
- basic electronics/instrumentation
- power engineering
- chemical engineering technology
- petroleum engineering technology
- mechanical engineering technology.

For information about related post-secondary programs, see the Power Engineer, Chemical Engineering Technologist, Petroleum Engineering Technologist and Mechanical Engineering Technologist occupational profiles.

Employers generally provide in-house training programs for new employees and ongoing courses for experienced employees.

Employment and Advancement

(section revised JANUARY 2006)

Specialized oil pipeline companies and some integrated oil and gas companies operate pipelines. Job applicants usually approach these companies directly for information on employment opportunities in pumping station operations.

Inexperienced individuals often start as summer help or utility workers and, with experience, advance to gauger positions. Gaugers may become tank farm operators and station supervisors. Additional courses and technical school programs are often required to move into electronics, control centre operations or mechanical maintenance positions.

Oil pipeline operators and maintenance workers are part of the larger National Occupational Classification 9232: Petroleum, Gas and Chemical Process Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,000 Albertans are employed in the Petroleum, Gas and Chemical Process Operators occupational group, which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since oil pipeline operators and maintenance workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for oil pipeline operators and maintenance workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Petroleum, Gas and Chemical Process Operators occupational group working part-time or full-time earned from **$35,400 to $115,000 a year.** The average salary was **$77,900 a year.**

Operations Manager

Produced JANUARY 2006

Operations managers direct and co-ordinate the operation of manufacturing, service delivery and production departments in industrial, commercial and government organizations.

NOC Number(s): 0911
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I M**

Duties

Operations managers oversee the activities in an organization that are directly related to making a product or providing a service. In other words, they oversee how people, materials, equipment, energy, money and information inputs are converted into useful goods and services.

In general, operations managers:

- analyze, design and improve the processes by which goods and services are produced
- implement and manage quality assurance programs
- forecast future demand for goods and services
- recommend locations for facilities such as plants, warehouses and service units
- plan the layout of facilities
- measure and improve productivity
- manage materials including purchasing, inventory control and distribution
- manage logistics and supply chains (the movement of goods into and out of production, distribution and retail facilities)
- manage the work force (for example, plan work schedules to meet projected demands for goods and services).

Working Conditions

Operations managers usually work standard office hours but overtime may be required when an organization makes significant changes to its operations. Some travel may be required, particularly in organizations with many facilities.

Personal Characteristics

Operations managers need the following characteristics:

- good oral and written communication skills
- the ability to motivate, lead and manage employees
- a commitment to customer satisfaction.

They should enjoy:

- directing the work of others
- negotiating with other managers to find innovative solutions to problems
- taking a methodical approach to their work.

Educational Requirements

There is no standard educational requirement to become an operations manager but a degree or post-secondary diploma in business or engineering is recommended. Employers in particular industries may require specialized courses or related experience.

In Alberta, post-secondary institutions throughout the province offer management and engineering programs (for more information, see related profiles such as Industrial Engineer, Industrial Engineering Technologist and Marketing Manager). The following institutions offer programs with specializations in operations or supply chain management:

- **Grant MacEwan College** in Edmonton offers a four year Applied Bachelor's degree program in International Business and Supply Chain Management that includes a one year practicum. The entrance requirement is a high school diploma with a 65 per cent average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30 or equivalent), a 30 level science course, Social Studies 30 or a 30 level language other than English, and one other course selected from approved lists. The College also offers a two year Logistics Management diploma program.
- **Mount Royal College** in Calgary offers a four year Applied Bachelor's degree program in International Business and Supply Chain Management. The entrance requirement is a 60 per cent average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30) and three other Grade 12 subjects. The College also offers a Supply Chain Management certificate program through Continuing Education.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers an 11 course Operations Management program through Continuing Education.
- The **University of Alberta** in Edmonton offers four and five year (co-op) Bachelor of Commerce degree programs with specializations in operations management and distribution management. The entrance requirements are a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), a 30 level science and two other approved Grade 12 subjects, and completion of one pre-professional year.
- The **University of Calgary** offers four year and five year (co-op) Bachelor of Commerce degree programs with concentrations in operations management. The entrance requirement is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30) and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five-credit Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

APICS - The Educational Society for Resource Management awards the designation CPIM (Certified in Production and Inventory Management) to those who have successfully completed five courses, or CIRM (Certified in Integrated Resource Management) to those who have successfully completed five practitioner courses. The required courses are offered through post-secondary institutions.

Employment and Advancement

Operations managers work in advisory and management positions with:

- consulting firms
- manufacturers
- transportation companies
- distribution organizations
- service institutions.

Experienced operations managers may advance to senior management positions.

Operations managers are part of the larger National Occupational Classification 0911: Manufacturing Managers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Other Manufacturing**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,100 Albertans are employed in the Manufacturing Managers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since operations managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for operations managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for operations managers depend on the size and nature of the organization, the responsibilities of the position and the qualifications of the operations manager.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Manufacturing Managers occupational group working part-time or full-time earned from **$13,000 to $208,900 a year.** The average salary was **$69,900 a year.**

Operations Research Analyst

Produced JANUARY 2006

Operations research analysts use mathematical modelling and information technology to develop decision support systems for decision-makers in public and private organizations.

NOC Number(s): 2161.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

Operations research analysts use analytical methods, mathematical modelling techniques and information technology to predict system performance and compare the outcomes of alternative strategies or ways of managing complex systems.

Operations research analysis can be applied to a wide variety of management problems. For example, it may be used by:

- emergency medical services to plan the deployment of ambulances
- governments to analyze the flow of patients through a health care system
- hospitals to design blood banking systems or schedule staff and operating rooms
- police departments to devise shift schedules that minimize response time and meet budget and human resource needs
- municipalities to decide where a hazardous waste facility should be located
- railway companies to schedule and optimize the use of rolling stock
- airlines to develop pricing strategies, schedule crews and aircraft, and develop disaster recovery plans
- manufacturing companies to design or increase the efficiency of production systems
- oil companies to evaluate prospective oil or gas projects
- forestry companies to help decide how to manage large tracts of forest land
- investment firms to manage risk and optimize portfolios.

In general, operations research analysts:

- meet with decision makers to identify problems and clarify management objectives
- observe the current system in operation, if necessary and possible
- manage and analyze large amounts of data that describe how systems operate and perform
- use scientific methods to develop mathematical models that can be used to predict how systems will behave if different courses of action are taken
- use computers to develop and run models and investigate the merits of alternate courses of action.

Sometimes, operations research analysts work as part of interdisciplinary teams that include such diverse professionals as economists, engineers and managers.

Working Conditions

Operations research analysts usually work in an office environment in large organizations or consulting firms. Since the work is project oriented, some overtime may be required to meet project deadlines. However, hours of work are often flexible. Some travel may be required to study systems in operation.

Personal Characteristics

Operations research analysts need the following characteristics:

- good mathematical ability
- good spatial perception
- good communication skills including listening and public speaking skills.

They should enjoy synthesizing information to develop innovative solutions to complex problems, applying statistical theory and mathematical techniques, and advising others.

Educational Requirements

The minimum academic requirement to become an operations research analyst is a bachelor's degree specializing in industrial engineering, management science or quantitative analysis. Computer skills related to data analysis and mathematical or statistical modelling are required. Those who have a related master's degree have a definite advantage when seeking employment.

In Alberta, the following institutions offer directly related degree programs:

- The **University of Alberta** in Edmonton offers four year and five year co-operative education Bachelor of Commerce degree programs with specializations in operations management, distribution management, and decision and information systems. The entrance requirements are a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), a 30 level science and two other approved Grade 12 subjects, and completion of one pre-professional year with a competitive average in math, economics and English courses. The University of Alberta also offers a Master of Business Administration (MBA) degree program and a doctoral (PhD) degree program with a concentration in management science.
- The **University of Calgary** offers four year and five year co-operative education Bachelor of Commerce degree programs in Management Information Systems. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30) and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five-credit Grade 12 subject.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

In collaboration with several Canadian universities, the **Canadian Operational Research Society (CORS)** offers a diploma to members who have completed post-secondary studies that cover operational research techniques, probability and statistics, computers and systems, and applications of operational research.

Employment and Advancement

Most operations research analysts are employed in the head offices of large process, manufacturing and service firms. Some are employed by:

- consulting firms
- universities
- government departments.

Entry level operations research analysts start working on well-defined problems and progress to less clear-cut problems. Experienced analysts may start their own consulting businesses or move into other management positions.

Operations research analysts are part of the larger National Occupational Classification 2161: Mathematicians, Statisticians and Actuaries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Educational Services**
- **Food and Beverage Products Manufacturing**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Employment demand specifically for operations research analysts has been relatively limited in Alberta but changes in computer technology (for example, reasonably priced, user friendly spreadsheet tools for operations research) are making operations research more accessible to smaller organizations.

Over 450 Albertans are employed in the Mathematicians, Statisticians and Actuaries occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since operations research analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for operations research analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Starting salaries for operations research analysts vary according to the employee's qualifications and the nature of the position.

Ophthalmic Assistant

Produced JANUARY 2005

Ophthalmic assistants assist ophthalmologists (eye surgeons) with patient care.

NOC Number(s): 3235.5
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S O**

Duties

Depending on the work setting and the level of responsibility delegated by the ophthalmologist, ophthalmic assistants may:

- operate testing and measuring instruments to assess patient vision (including peripheral fields of vision)
- record test results and case histories
- assist ophthalmologists in office surgery
- maintain sterile equipment in the office
- administer eye drops, ointments and medications as directed by physicians
- assist in fitting contact lenses
- conduct tests designed to detect eye diseases
- educate patients by explaining physicians' instructions (e.g. about home care or contact lens use).

Working Conditions

Ophthalmic assistants work in office or clinical settings. They work the same hours as ophthalmologists which may include weekdays, evenings and weekends.

Personal Characteristics

Ophthalmic assistants need the following characteristics:

- patience and a courteous, pleasant manner
- the ability to interact confidently and reassuringly with patients
- curiosity about and interest in medical science
- the ability to maintain patient confidentiality
- a reasonable level of manual dexterity and visual acuity
- good organizational skills
- good oral and written communication skills.

They should enjoy compiling and recording information accurately, working with people, and operating testing and measuring instruments and equipment.

Educational Requirements

In Alberta, most ophthalmic assistants have been **trained on the job**. Ophthalmologists generally prefer to hire applicants who have:

- computer skills
- a background in medical terminology
- a strong background in math and sciences
- a valid CPR Basic Rescuer certificate.

The Canadian Medical Association's cojoint accreditation process assesses education programs in 14 health science professions to ensure national standards are met. A list of approved Ophthalmic Medical Technician/Technologist education programs is published on the Joint Commission on Allied Health Personnel in Ophthalmology (JCAHPO) website.

Other Requirements

Certification is not mandatory for ophthalmic assistants in Alberta but employers may prefer to hire job applicants who have been certified by JCAHPO.

Employment and Advancement

(section revised JANUARY 2006)

Ophthalmic assistants are employed in:

- hospitals
- clinics
- private ophthalmologists' offices.

Advancement generally takes the form of more complex responsibilities. In larger organizations, ophthalmic assistants may advance to ophthalmic technician and ophthalmic technologist positions.

Ophthalmic assistants are part of the larger National Occupational Classification 3235: Other Technical Occupations in Therapy and Assessment. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,900 Albertans are employed in the Other Technical Occupations in Therapy and Assessment occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since ophthalmic assistants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for opthalmic assistants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary depending on work setting, level of responsibility, education and experience. In general, ophthalmic assistants earn from **$25,000 to $50,000 per year (2005 estimate).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Technical Occupations in Therapy and Assessment occupational group working part-time or full-time earned from **$11,900 to $85,100 a year.** The average salary was **$30,600 a year.**

Optical Technician

Produced FEBRUARY 2005

Optical technicians manufacture, assemble and repair eyeglasses according to prescriptions from optometrists or ophthalmologists.

NOC Number(s): 3414.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M i

Duties

Optical technicians work in optical laboratories where they:

- cut, grind and polish lenses to precise measurements
- assemble eyeglass frames
- fit lenses into frames
- make minor adjustments.

For information about working directly with customers, see the Optician occupational profile.

Optical technicians may specialize in the surfacing or finishing phases of the lens manufacturing process. Surfacing includes:

- selecting and marking a blank lens to indicate required curvatures
- fastening the blank lens to a metal object for support during grinding and polishing
- generating the curve
- grinding and polishing lens surfaces to the prescribed specifications.

Finishing involves:

- measuring the lens power
- cutting lenses to the size and shape required to fit specified frames
- edging and bevelling lenses
- drilling lenses
- assembling eyeglasses.

Some optical technicians work in specialized contact lens laboratories where they manufacture contact lenses according to prescription.

Working Conditions

Optical technicians work in pleasant, clean laboratories. The work is not physically demanding but may require being on your feet much of the day. The only occupational hazard is the possibility of allergic reactions to chemical agents used in an optical laboratory. Having to prepare lenses in a limited amount of time can be stressful.

Optical technicians work a standard 40 hour week with some evening and weekend work required for those employed in quick service and retail optical dispensing businesses.

Personal Characteristics

Optical technicians need the following characteristics:

- good motor co-ordination, manual dexterity and finger dexterity
- mechanical ability
- patience and perseverance
- the ability to pay close attention to details
- the ability to work well in a team environment.

They should enjoy operating equipment and using hand tools, having clear guidelines and organized methods for their work, and making minor adjustments and repairs.

Educational Requirements

In Alberta, optical technicians are **trained on the job** in optical prescription laboratories. There are no standard education requirements but a high school diploma or a background in mathematics and science is an asset. Many employers look primarily for evidence that a job applicant has a keen mind and an interest in the field.

Employment and Advancement

(section revised JANUARY 2006)

Many optical technicians are employed by large full service laboratories, where they specialize in particular types of tasks. Other technicians work in smaller surfacing or edging laboratories associated with optical dispensing businesses or optometrists' practices.

Trainees may start work in the stock room of an optical laboratory before progressing to surfacing or finishing operations. After about three months at a particular task, trainees move to another task. It takes about three years for trainees to become sufficiently skilled to work unsupervised in either surfacing or finishing.

Experienced optical technicians may advance to supervisory positions in laboratories or move into related fields such as selling safety programs to industry, or selling and repairing optometric diagnostic instruments. Some technicians continue to study to become a dispensing optician (see the Optician profile), although there is a trend toward training specifically for one occupation or the other.

Optical technicians are part of the larger National Occupational Classification 3414: Other Assisting Occupations in Support of Health Services. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,100 Albertans are employed in the Other Assisting Occupations in Support of Health Services occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since optical technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for optical technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for optical technicians vary greatly depending on the size of the laboratory. In the initial stages of training, hourly wages may be low. However, wages increase as technicians progress through their training and gain more experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Assisting Occupations in Support of Health Services occupational group working part-time or full-time earned from **$11,900 to $58,200 a year.** The average salary was **$23,700 a year.**

Optician

Produced FEBRUARY 2005

Opticians fit and adapt eye glasses, contact lenses, low vision aids and other optical appliances according to prescriptions.

NOC Number(s): 3231
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M S

Duties

Opticians work in a retail environment dispensing glasses from written prescriptions or by duplicating existing eyewear. In general, they:

- analyze and interpret prescriptions
- help customers select frames of the most suitable size and shape based on prescription and anatomical considerations
- advise customers regarding lens and frame types
- provide basic eye health and vision screening, and referrals to appropriate health care professionals when necessary
- take measurements to determine the size, shape and specifications for lenses, frames and lens forms
- prepare work orders for optical technicians who grind lenses
- assemble eye glasses
- verify that completed eye glasses or lenses fit and are manufactured to the required specifications
- make appropriate adjustments to ensure customer comfort
- fit and dispense low vision appliances
- promote eye health and the correct use of ophthalmic appliances by educating consumers
- conduct or collaborate in optical related research.

They also may:

- arrange and maintain displays of optical merchandise
- supervise the training of student opticians
- purchase supplies or perform related accounting duties.

Working Conditions

Opticians are on their feet for much of their working day. They may operate their own independent business, or they may work in retail outlets or for optometrists or ophthalmologists. Those working in retail stores may be required to work some evenings and weekends.

Personal Characteristics

Opticians need the following characteristics:

- a courteous, pleasant manner
- good communication skills
- critical thinking and conflict resolution skills
- the ability to analyze and interpret customer issues
- the ability to pay close attention to details
- a good sense of spatial relationships
- the finger dexterity required to manipulate small objects and instruments.

They should enjoy dealing with people, operating optical devices, and compiling and checking information.

Educational Requirements

In Alberta, opticians are trained through **a combination of on-the-job training and technical courses.**

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year independent study Ophthalmic Dispensing - Glasses certificate program. This program is offered through Continuing Education. Applicants must:

- have a high school diploma or equivalent with Pure or Applied Math 30 or equivalent (Physics 30 is recommended)
- be employed full-time with a certified optician or optometrist.

During the program, trainees participate in evening lectures and labs, and complete independent study projects while working in an optical dispensary or for an optometrist or ophthalmologist.

NAIT also offers a two year independent study Ophthalmic Dispensing - Contact Lenses advanced practice certificate program through Continuing Education. Applicants must be registered eyeglass opticians.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Opticians Act and Ophthalmic Dispensing Regulation, only registered members of the Alberta Opticians Association (AOA) may call themselves or practice as an Optician.

Employment and Advancement

(section revised JANUARY 2006)

Opticians may be employees or independent owners of retail optical services. Some opticians work in association with ophthalmologists, optometrists or a group of optical practitioners.

Most opticians work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Opticians occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

This occupation generally has a high turnover rate and employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary considerably depending on the company and the opticians' skills. Some opticians are paid commissions on the sale of optical devices.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Opticians occupational group working part-time or full-time earned from **$13,300 to $46,600 a year.** The average salary was **$23,000 a year.**

Optometrist

Produced JANUARY 2005

Optometrists examine patients' eyes, diagnose diseases and disorders of the eye and associated structures, prescribe and dispense eyeglasses and contact lenses, prescribe therapeutic drugs and recommend appropriate treatments.

NOC Number(s): 3121
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O S D**

Duties

In general, optometrists:

- measure the eye and visual function
- prescribe and dispense eyeglasses and contact lenses
- diagnose diseases and disorders of vision
- remove non-penetrating foreign bodies (e.g. metal) from the eye
- prescribe eye exercises to achieve accurate and comfortable vision
- undertake rehabilitative intervention for low vision
- treat certain eye conditions with therapeutic drugs
- educate and counsel patients about contact lens care, appropriate lighting and sunglasses or tints, and eye safety at home and in the workplace
- refer patients, when appropriate, to ophthamologists (e.g. for cataracts or a detached retina) or family physicians (e.g. for headaches that are not eye-related, or signs of high cholesterol, high blood pressure or diabetes)
- treat glaucoma in co-management arrangements with ophthalmologists
- act as consultants to other health care providers
- provide teachers, physiotherapists, occupational therapists, school psychologists and other professionals with eye health information on their clients or students.

Working Conditions

Optometrists usually work with receptionists, ophthalmic assistants and opticians, who may complete supervised pre-testing procedures. Most of their working time is spent in office environments with artificial lighting.

Optometrists are usually self-employed and therefore can determine their working hours. Some work evenings and weekends to accommodate patients. With an established practice, optometrists tend to stay in the same locality for the duration of their careers.

Personal Characteristics

Optometrists need the following characteristics:

- the learning ability required to complete the academic requirements
- good communication skills
- a compationate personality
- the spatial and form perception required to interpret test results and identify visual defects.

They should enjoy operating specialized instruments, working with people and analyzing information to make decisions.

Educational Requirements

The academic training required takes **at least six years** to complete.

In Canada, two institutions offer four year Doctor of Optometry degree programs:

- The **University of Waterloo** in Ontario offers an optometry degree program in English. The entrance requirement is at least two years of a university science program with an average of at least 75 per cent (3.0/4.0 grade point average) in the following pre-requisites: biology, physics, chemistry, calculus, psychology, English, physiology, linear algebra or geometry and trigonometry, introductory ethics, organic chemistry, microbiology, biochemistry and statistics. Courses in human anatomy, embryology, genetics and histology are recommended. In 2004, there were 250 applicants for 75 spaces in this program.
- The **University of Montreal** in Quebec offers an optometry degree program in French. Entrance requirements are similar to those for the University of Waterloo program.

A number of universities and colleges in Alberta offer university science degree programs and courses which will satisfy entrance requirements for Optometry. Entrance requirements for these programs vary but, in general, include a high school diploma with an average of at least 60 per cent (some programs require at least 70 per cent) in English 30-1, Pure Math 30, Biology 30, Chemistry 30 and Physics 30. A higher average is required for admission to some programs.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Professions Act and Optometrists Profession Regulation, registration with the Alberta College of Optometrists (ACO) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College perform restricted activities specified in the Regulation. Only registered members may call themselves Optometrists.

Employment and Advancement

(section revised JANUARY 2006)

After graduation, an optometrist may:

- go directly into private practice by starting up a practice where there is a need for one or by purchasing an established practice.
- join another practitioner or group of practitioners in a busy practice. (Through this type of association, it may be possible to eventually become a partner or owner, or to obtain sufficient capital to establish one's own practice.)
- work with an ophthalmologist providing pre and post operative eye care.

In addition to offering regular optometric services, optometrists may become involved in areas of public health such as:

- advising parents about potential eye hazards for children
- diagnosing perceptual handicaps which hinder learning in school-age children
- consulting with industrial safety personnel on the selection and placement of employees
- fitting low vision patients whose vision can only be improved through the use of special magnifying devices.

Optometrists who continue their education beyond the Doctor of Optometry degree may move into research, teaching or industrial applications of vision science.

In Alberta, most people employed as optometrists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 450 Albertans are employed in the Optometrists occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

For the first few years, income levels may be relatively low for optometrists who start private practices. However, after five years, their incomes often exceed the incomes of optometrists who are employed by others. Further income increases depend on the optometrist's ability, time and desire to serve a growing number of patients.

In general, optometrists' incomes compare favourably with those of other health professionals.

Orchestra/Band Conductor

Produced MAY 2003

Orchestra and band conductors produce their own interpretations of musical works by directing performers in musical groups such as chamber orchestras, wind ensembles, concert bands, symphony orchestras, jazz bands and orchestras for ballet and opera performances.

NOC Number(s): 5132.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I M**

Duties

In general, orchestra and band conductors:

- select music that is appropriate to the talents, abilities and strengths of the group
- study musical scores to learn the music in detail and develop a particular interpretation of the music
- use gestures to shape the music (develop colour, tone, volume, pitch and desired quality) and to keep the musicians in time
- audition instrumentalists to select musicians for their group
- schedule, prepare for and direct rehearsals.

Occasionally, they may also:

- meet with composers to discuss interpretations of their work
- perform administrative duties such as scheduling performances, organizing tours and negotiating recording contracts
- work with music librarians to ensure that musical scores are available
- conduct guest soloists in addition to the ensemble.

Conductors usually schedule rehearsals, allowing sufficient time for the preparation of new works as well as reviewing the standard repertoire. The principal conductor or guest conductor meets separately with each soloist well in advance of a performance. They also work closely with concertmasters (principal solo violinists) in preparing for rehearsals.

A conductor's reputation is based largely on presenting a strong, dynamic presence as a leader. This comes from exceptional talent (most conductors are first class performers themselves), a unique style and the ability to communicate with musicians individually and collectively.

Some conductors hold the additional role of **music director** of an orchestra or musical group. Music directors make artistic decisions for the group, including choosing the repertoire and guest artists for the upcoming season.

Symphony orchestras often have a general manager who works closely with the music director/conductor to handle financial matters. Overseeing the activities of the music director and general manager is a board of directors. In larger organizations, the management team also includes an artistic administrator who works closely with the conductor or music director and management and is usually a member of negotiating teams.

Working Conditions

Guest conducting often involves a considerable amount of travelling. It may include conducting singers as well as players. Sometimes, orchestra conductors conduct several hundred performers at one time, including instrumentalists, choirs and soloists.

Personal Characteristics

Orchestra and band conductors need the following characteristics:

- passion, insight and musical talent

- the ability to inspire members of the orchestra or band
- the flexibility required to be responsive to member needs, abilities and ideas.

They should enjoy taking charge and controlling situations, and developing innovative approaches.

Educational Requirements

(section revised JANUARY 2006)

Orchestra and band conductors must have a thorough knowledge of music, beginning with the study of an instrument (usually, piano). In general, they need:

- mastery of at least one instrument and performance experience
- an overall understanding of musical instruments and their techniques
- interpretive skills and instincts
- ear training (the ability to hear more than one voice at a time)
- practical experience in composition
- advanced skills in musical analysis
- demonstrated mastery of various musical styles
- knowledge of conventional conducting techniques (use of the baton, right and left arms) and the ability to express themselves through gestures.

Conductors may also have:

- studied the languages of the great composers (Italian, French and German)
- studied the standard repertoire of various musical periods
- cultivated a broad appreciation for the arts and history, through travel and study beyond their music training.

Formal academic training for conductors often starts with a four year bachelor's degree in music. Most conductors then continue their music education with a master's degree or even a doctoral degree in music or study at a music conservatory. Admission to a graduate degree program generally requires an acceptable average in a related bachelor's degree program.

In Alberta, the following post-secondary institutions offer **four year** bachelor's degree programs in music.

- **Alliance University College** in Calgary. The entrance requirement is five senior matriculation level courses including English and math with an minimum overall average of 60 per cent.
- **Canadian Nazarene University College** in Calgary. The entrance requirement is a high school diploma with a minimum average of at least 60 per cent in five Grade 12 subjects including English, and math or a second language.
- **Canadian University College** in College Heights. The entrance requirement is a high school diploma with English 30 and at least three other 30-level courses.
- **The King's University College** in Edmonton. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **University of Alberta** in Edmonton. The entrance requirement for the Bachelor of Music program is a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: a 30-level language other than English, a second 30-level language other than English, Biology 30, Chemistry 30, Physics 30, Math 30, Pure Math 30, Math 31, Science 30, one approved Fine Arts subject. An audition, music rudiments exam and aural skills exam are required. The University of Alberta in Camrose also offers bachelor degree programs in music.
- **University of Calgary**. The entrance requirements are a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Music 30 or one five credit Grade 12 subject. An audition and interview are also required. The University of Calgary also offers a master's degree program in music, and a Diploma of Fine Arts program in Music (three summer sessions of three weeks each). The entrance requirement for the diploma program is a bachelor's degree in music (or individual assessment of qualifications).
- **University of Lethbridge**. The entrance requirements are an average of at least 65 per cent in English 30, three other appropriate 30-level subjects and a fifth Grade 12 subject, an appropriate music background and an audition.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Those wishing to teach music and conduct groups in schools may take any of the following education routes:

- a four year Bachelor of Education (B.Ed.) degree, specializing in music
- a five year combined B.Mus./B.Ed. degree
- a three or four year bachelor's degree in music followed by two or more years in a Bachelor of Education (After Degree) program.

For a listing of Alberta post-secondary institutions that offer programs in Education, see the Secondary School Teacher occupational profile.

Aspiring conductors should observe well known conductors in action. Some established conductors will allow conducting students to attend and observe working rehearsals. It may be possible for a student interested in conducting to assist a teacher or principal conductor with a youth orchestra or school band.

Employment and Advancement

(section revised JANUARY 2006)

There are many more conductors than orchestras and bands in Canada. Young conductors may start out by working with community and youth orchestras, as repetiteurs for opera ensembles or in staff, rehearsal or conductor-in-residence positions.

Conductors may work with:

- junior and senior high school groups
- university and college groups
- community groups
- small professional ensembles (jazz and dance bands, chamber orchestras, wind ensembles)
- large symphonic orchestras.

School band conductors are usually expected to teach classes in music, as well as direct the school band.

Conductors may gain recognition and visibility by:

- attending conductor training workshops
- working with soloists who are impressed with a conductor's performance
- working with composers of new works
- winning awards at national and international competitions
- obtaining study grants and scholarships to study abroad
- guest conducting with other orchestras.

Many conductors must work in other music-related areas to make a living while they study and gain experience. This may include performing, teaching, composing or arranging.

Orchestra and band conductors are part of the larger National Occupational Classification 5132: Conductors, Composers and Arrangers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Repair, Maintenance, Personal and Other Services**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta,
- **employment turnover** (work opportunities generated by people leaving existing positions),
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before), and
- **size of the occupation.**

Over 300 Albertans are employed in the Conductors, Composers and Arrangers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since orchestra and band conductors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for orchestra and band conductors.)

Salary

(section revised OCTOBER 2005)

Salaries for school band conductors who have a degree and a teaching certificate vary depending on the individual's qualifications and experience. Community orchestras may pay conductors minimal salaries or token honorariums.

Fees and salaries for orchestra conductors are generally negotiated separately for each contract. In smaller orchestras, they can range significantly.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conductors, Composers and Arrangers occupational group working part-time or full-time earned an average salary of **$22,900 a year**.

© Government of Alberta, Human Resources and Employment

Orchestrator/Arranger

Produced MAY 2003

Orchestrators transcribe musical compositions into scores and assign specific passages to particular instruments to add desired variations of sound. Arrangers rewrite original musical scores in different musical styles by changing the rhythm, harmony or tempo.

NOC Number(s): 5132.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I m**

Duties

After studying an original piece of music, orchestrators and arrangers experiment with it and choose various combinations of instruments to produce desired effects. Arrangers may also add vocal parts. The difference between orchestrators and arrangers is in the degree to which they change the original music.

Orchestrators assign specific passages of a score to particular instruments to produce the desired tonal colour (variation of sound) but do not often make other changes to the original composition. Then they write out each individual musical part clearly on score paper. Often the composer of the musical piece is also the orchestrator, or the composer provides an orchestral sketch and the orchestrator writes out all of the instrumental parts in detail.

Arrangers make changes in the original piece of music to accommodate the requirements of a particular medium (band, orchestra, choral group, solo artist, film score, radio jingle). They may work on new arrangements of old hits (e.g. arrange an old gospel tune in a jazz style) or arrange new compositions for different mediums or in different styles.

Arrangers often use synthesizers and computers to experiment with a variety of musical sounds. During recording sessions, arrangers may act as musical directors, selecting songs, scoring charts, rehearsing musicians and conducting the performance.

Many orchestrators and arrangers notate their own scores, although they may hire music copyists to copy musical parts.

Working Conditions

Orchestrators and arrangers generally determine their own working environment and working hours. However, they may be required to work long hours to meet tight deadlines.

Personal Characteristics

Orchestrators and arrangers need the following characteristics:

- the ability to work with a wide variety of people
- good communication skills
- the ability to work under pressure and still produce scores that are clear and neat in appearance.

They should enjoy being creative, and using instruments and computers to perform tasks requiring precision.

Educational Requirements

(section revised JANUARY 2006)

Arrangers and orchestrators generally begin **training in music theory, history and performance** at an early age. Most play at least one instrument and understand the ranges and techniques of other instruments and the human voice. In general, they must have:

- strong abilities in reading and writing music
- a thorough understanding of various styles of music
- a good ear for hearing the individual parts in songs

- extensive knowledge of music theory, harmony, counterpoint, composition and orchestration.

Most post-secondary music programs include courses in orchestration. In Alberta, the following instutitions offer post-secondary music programs.

- **Alliance University College** offers a four year BA in Music. The entrance requirement is five senior matriculation level courses including English and math with an minimum overall average of 60 per cent.
- **Banff Centre for the Arts** offers intensive workshops with world-class musicians and conductors. Applicants must submit a portfolio, project description and resume. An audition tape may be required.
- **Canadian Nazarene University College** in Calgary offers a three and four year BA in Music. The entrance requirement is a high school diploma with a minimum average of at least 60 per cent in five Grade 12 subjects including English, and math or a second language.
- **Canadian University College** in College Heights offers three year and four year degree programs in Music. The entrance requirement is a high school diploma with English 30 and at least three other courses at the 30 level.
- **Concordia University College of Alberta** in Edmonton offers a three year degree program in Music. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **Gardner College - A Centre for Christian Studies** in Camrose offers a two year Music Performance diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33.
- **Grande Prairie Regional College** offers a two year Music Acoustic diploma program. The entrance requirement is a high school diploma with English 30, Music 30 and Grade 2 Conservatory music theory (or equivalent). A placement exam and an audition are required.
- **Grant MacEwan College** in Edmonton offers a two year Music diploma program with specializations in performance, recording arts and writing. The emphasis in this program is on jazz and commercial music. The entrance requirement is a high school diploma or equivalent.
- **Keyano College** in Fort McMurray offers one year certificate and two year diploma programs in Music. The entrance requirement is a high school diploma with English 30 or 33 and an audition.
- **The King's University College** in Edmonton offers three year and four year degree programs in Music. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **Mount Royal College** in Calgary offers a two year Music Performance diploma program with specializations in orchestral instruments and vocal music. The entrance requirements are a high school diploma or equivalent, performance skills equivalent to Grade 10 Conservatory, an audition and a placement test in music theory, history and keyboard.
- **Red Deer College** offers a two year Music diploma program. The entrance requirements are a high school diploma with English 30 or 33, an audition and an examination.
- **University of Alberta** in Edmonton offers four year degree programs and five year combined degree programs in Music. The entrance requirement for the Bachelor of Music program is a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: a 30-level language other than English, a second 30-level language other than English, Biology 30, Chemistry 30, Physics 30, Math 30, Pure Math 30, Math 31, Science 30, one approved Fine Arts subject. An audition, music rudiments exam and aural skills exam are required. The University of Alberta in Camrose also offers bachelor degree programs in music.
- **University of Calgary** offers a four year degree program with a specialization in composition. The entrance requirements are a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Music 30 or one five credit Grade 12 subjects. An audition and interview are also required.
- **University of Lethbridge** offers four year degree programs and five year combined degree programs with a specialization in theory (including composition). The entrance requirement are an average of at least 65 per cent in English 30 and three other appropriate 30-level subjects plus a fifth Grade 12 subject, an appropriate music background and an audition.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Orchestrators and arrangers are almost always freelance artists; there are virtually no full-time positions. They are usually hired by composers or performers or work on commissions. In large music centres in Canada, they may also work with:

- music publishers to score various pieces (particularly educational music)
- wired music services (e.g. Muzak) to produce packages of music tapes
- television and film studios to create soundtracks
- musical ensembles (e.g. small bands, groups, studio orchestras)
- songwriters.

Most orchestrators and arrangers also work part-time in related fields such as composition, teaching, producing and performing. Experienced orchestrators and arrangers may move into fields such as music publishing or artist management.

Some orchestrators choose to specialize in one type of music (e.g. choral works or pop music). However, the ability to work in several different mediums and music styles is a definite asset when looking for work.

Orchestrators and arrangers are part of the larger National Occupational Classification 5132: Conductors, Composers and Arrangers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Conductors, Composers and Arrangers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since orchestrators and arrangers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for orchestrators and arrangers.)

Salary

(section revised OCTOBER 2005)

The American Federation of Musicians of the United States and Canada (AFM) pay scales for orchestrators vary with the number of lines on a page, the length of the piece and the medium. Most fees are negotiated between the client and the orchestrator. It is not absolutely necessary for orchestrators and arrangers to belong to the AFM; however, some employers, particularly in film and television, hire only union members.

In some instances, arrangers negotiate royalty agreements for pieces of music they have arranged or recorded, in addition to their fee.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conductors, Composers and Arrangers occupational group working part-time or full-time earned an average salary of **$22,900 a year**.

Outdoor Power Equipment Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Outdoor power equipment technicians repair, service and maintain small gasoline and diesel powered marine, power, recreational and turf equipment used by industry and homeowners.

NOC Number(s): 7335
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Duties vary from one position to another but, in general, outdoor power equipment technicians:

- review and interpret work orders and technical manuals
- inspect and test engine, motors and other mechanical components using test devices to diagnose and isolate faults
- adjust, repair or replace mechanical or electrical system parts and components using hand tools and equipment
- test and adjust repaired equipment for proper performance
- perform scheduled maintenance service on equipment
- advise customers on work performed and general condition of equipment
- estimate cost of repairs.

In Alberta, there are four types of outdoor power equipment technicians: marine equipment technician, power equipment technician, recreational equipment technician and turf equipment technician.

Marine equipment technicians repair, service and maintain equipment such as outboard motors and jet drives in boats and personal watercraft.

Power equipment technicians repair, service and maintain equipment such as generators, mowers and chain saws.

Recreational equipment technicians repair, service and maintain equipment such as snowmobiles and recreational multi-wheeled utility vehicles.

Turf equipment technicians repair, service and maintain equipment such as aerators and golf carts.

Working Conditions

The working conditions for outdoor power equipment technicians vary depending on the branch.

Recreational equipment technicians usually work indoors in shops and occasionally outdoors. Most work a 40-hour, five-day week. However, some evening, weekend or holiday work may be required, particularly during the busier months. Some may experience seasonal layoffs during the winter months. They may be some risk of injury when working with hand and power tools.

Power equipment technicians may work in the comfort of a fully equipped service centre or they may have to travel to make service calls. Hours of work vary from regular hours to long and hectic hours during busy seasons. The work is often dirty and greasy. There is some risk of injury when working with hot engines and sharp edges.

Marine Equipment Technicians. In colder climates, the work is seasonal. They are very busy doing diagnostic and repair work in the warmer months, and may encourage customers to have preventative maintenance work done in the winter. Because of the seasonal nature of the work, they must be skilled in other types of repair work (eg. repairing snowmobiles) to remain employed year-round. They usually work indoors in shops. The work is noisy when engines are being tested. There is some risk of injury when working near exhaust fumes.

Turf Equipment Technicians. These technicians have the same working conditions as the marine equipment technicians.

Outdoor power equipment technicians may be required to lift items weighing over 25 kilograms (up to about 65 kilograms).

Personal Characteristics

Outdoor power equipment technicians need the following characteristics:

- a mechanical ability and an interest in all types of machinery and engines, electronics and precision equipment
- good customer service skills
- the willingness to work long hours in the busy season
- the ability to work independently or as part of a team
- the ability to think logically
- the ability to keep up to date with changing technology
- the ability to work in a standing position for long periods of time
- the ability to work in awkward, tight or confined spaces.

They should enjoy doing precision work, problem-solving and working with their hands.

Educational Requirements

To work in Alberta, outdoor power equipment technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least Alberta Math 10 or 13, Pure Math 10 or Applied Math 10 and English 10 or 13 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** for all four branches is four years (four 12-month periods) that include a minimum of 1,000 hours of on-the-job training and eight weeks of technical training for the first three years and a minimum of 1,000 hours of on-the-job training and six weeks of technical training in the fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Northern Alberta Institute of Technology (NAIT)** offers the following certificate programs. The entrance requirement for all the programs is English 10 or a Grade 11 English and Math 10 or a Grade 11 Math or equivalent:
  - 32-week Marine Service Technician certificate of achievement program in Edmonton
  - 32-week Outdoor Power Equipment Technician certificate of achievement program in Fairview.
  - one year Turfgrass Equipment Technician certificate.

- **Portage College** in Lac La Biche offers a 24-week Outdoor Power Equipment Technician certificate program. The entrance requirement is at least Grade 9 or equivalent.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Outdoor power equipment technicians are employed by a variety of employers in both the private and public sectors, in a number of different industries, based on specialized equipment. Some employers may include equipment distributors, retailers, rental companies, construction companies, landscaping maintenance and builders, golf courses, parks and recreation, forestry companies or original equipment manufacturers.

Experienced journeyman may be moved to supervisor or service manager positions, may be self-employed or start their own business. Alberta certified journeyman outdoor power equipment technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Outdoor power equipment technicians are part of the larger National Occupational Classification 7335: Other Small Engine and Equipment Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Information, Culture and Recreation**
- **Retail Trade**
- **Finance, Insurance and Real Estate**
- **Wholesale Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (see working conditions)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 550 Albertans are employed in the Other Small Engine and Equipment Mechanics occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since outdoor power equipment technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for outdoor power equipment technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates for the branches of the Outdoor Power Equipment Technician trade vary, but generally range from **$18 to $24 an hour plus benefits** (2006 estimates).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Small Engine and Equipment Mechanics occupational group working part-time or full-time earned from **$21,900 to $98,400 a year.** The average salary was **$44,300 a year.**

Outdoor Sport/Recreation Guide

Produced MAY 2005

Outdoor sport and recreation guides organize and conduct outdoor activities such as mountain expeditions, rafting trips, hunting trips, fishing trips and trail rides.

NOC Number(s): 6442
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M O

Duties

Outdoor sport and recreation guides may be specialists in mountain guiding, white-water rafting, hunting, fishing or ecotourism. Some guides work in a combination of these areas.

Mountain guides organize and conduct climbing, hiking and skiing expeditions in the mountains. In general, they are responsible for:

- planning expeditions and instructional sessions that are appropriate for clients' abilities and environmental conditions
- assembling the required equipment and supplies
- arranging transportation to and from the starting point
- leading the group during the expedition
- providing information about local vegetation, wildlife and natural history
- preparing meals and setting up camp on overnight expeditions
- providing first aid services when they are needed.

Mountain guides also may teach skills to skiers, climbers and mountaineers. They may specialize in skiing, rock climbing, alpine climbing, hiking or instructing on climbing structures.

White-water rafting guides lead groups of people on rafting trips through scenic stretches of river and white-water rapids. In general, they are responsible for:

- planning expeditions
- assembling supplies and equipment prior to departure
- instructing clients on safe rafting procedures
- preparing base camps for longer expeditions.

Once on the river, white-water rafting guides must:

- follow a specified route and provide instructions and commentary while steering the raft through a safe but challenging path
- read the water (determine by watching the surface of the river what is going on underneath the surface and how it will affect the raft)
- handle emergency situations such as a raft caught sideways against a rock, a passenger in the river or a punctured raft.

On trips lasting more than a few hours, guides also are responsible for preparing meals, setting up camp and entertaining their groups.

Hunting and fishing guides plan, organize and lead hunting and fishing trips, photo safaris and nature study expeditions. In general, they are responsible for:

- choosing the route that will provide the best camping sites and animal or fish habitats
- explaining hunting and fishing regulations and ensuring that they are obeyed
- providing advice on equipment and tackle
- checking equipment and supplies
- providing appropriate transportation (e.g. motorboats, land vehicles, horses)

- ensuring that appropriate safety practices are observed
- providing information about the habitat and wildlife seen on the trip
- setting up campsites and cooking meals
- providing first aid when necessary.

When guiding novices, they also teach clients how to clean, preserve and cook fish or game, and dispose of waste parts.

Ecotourism guides provide leadership and information about natural habitats, wildlife and sustainable development. They may lead groups participating in outdoor activities such as hiking, cycling, mountaineering, canoeing, kayaking, sailing or horseback riding. For information about a closely related occupation, see the Interpretive Naturalist occupational profile.

Working Conditions

Outdoor sport and recreation guides work outdoors, often in wilderness conditions. The work is generally seasonal and can be strenuous. Guides may be away from home for long periods and their hours of work may be unpredictable (e.g. virtually non-stop during favourable weather conditions).

Most guides must be able to lift items weighing up to 25 kilograms. Mountain guides must be able to lift items weighing over 25 kilograms when necessary.

Personal Characteristics

Outdoor sport and recreation guides need the following characteristics:

- at least 18 years of age and in good health
- outgoing and enthusiastic
- strong leadership and conflict resolution skills
- patience, especially when dealing with inexperienced or troublesome clients
- the ability to handle emergency situations effectively
- commitment to ensuring client safety.

They should enjoy dealing with people, planning and arranging expeditions, and handling equipment and supplies.

Educational Requirements

There are no minimum education requirements but, in general, guides need:

- a good knowledge of their field
- certification in wilderness first aid and CPR (cardiopulmonary resuscitation)
- the appropriate level of swimming or skiing certification (if applicable)
- a valid Class 5 driver's licence (a Class 4 license is required in some situations)
- the knowledge and mechanical skills necessary to maintain their equipment.

Some guides must supply their own equipment. Those who are self-employed also need business skills.

To work in national and provincial parks, **mountain guides** must be certified by the **Association of Canadian Mountain Guides**. Certification as a mountain guide requires successful completion of the requirements for Alpine Guide and Ski Guide certificates. To attend the required courses, applicants should:

- be at least 19 years of age
- meet minimum climbing and skiing experience requirements (at least three years of experience in a variety of conditions)
- have completed a Canadian Avalanche Association Training Schools Professional Level 1 Avalanche course
- have first aid certification
- be in good health.

Becoming a certified mountain guide generally takes three to five years. It involves training in guiding techniques, work experience and assessment (including final exams). Most of the curriculum is field-based and involves practical exercises.

White-water rafting guides are trained on the job. In addition to safe rafting and emergency procedures, their training may include information about the history, wildlife and plants of the area in which they will be working. Employers of white-water rafting guides look for potential employees who have:

- good social skills
- excellent canoeing skills

- outdoor experience.

Most employers prefer to hire people who are already trained in rafting but will consider hiring people who have related experience and a good attitude.

Fishing guides require a valid Alberta Fishing license.

Hunting guides employed by outfitters must have a letter of recommendation from the outfitter employing them. Guide licenses issued on a letter of recommendation are valid only for the period of time the person is employed by the outfitter making the recommendation. Those who work with horses must be be knowledgeable about horses and able to read the water when crossing rivers.

To become a self-employed outfitter, hunting guides must:

- have held a guide's designation (license) for at least 12 months
- be bonded and insured
- obtain an Outfitter-Guide Permit.

Outfitters must purchase allocations through the **Alberta Professional Outfitters Society** to be able to contract with non-resident clients to hunt different types of game in various regions of the province.

In Alberta, the following post-secondary education institutions offer programs directly related to outdoor recreation.

- **Canadian University College** in College Heights offers Outward Pursuits programs ranging from a one year Outdoor Leadership certificate to Bachelor of Arts (BA) degree programs. The entrance requirement for these programs is a high school diploma with English Language Arts 30-1 and three other 30 level courses.
- **Lakeland College** offers a one year Adventure Tourism certificate program in Sherwood Park and two year diploma programs in Adventure Tourism and Outdoor Recreation, and Wildlife Guilding and Outfitting in Vermilion. The entrance requirement for the Adventure Tourism certificate and diploma programs is a high school diploma or equivalent with English Language Arts 30-1 (or English 30, or at least 65 per cent in ELA 30-2 or English 33) and Pure or Applied Math 30 (or Math 30 or 33). The entrance requirement for the Wildlife Guiding and Outfitting program is a high school diploma with ELA 30-1 or equivalent, Biology 20 and at least 60 per cent in Pure or Applied Math 10 or equivalent.
- **Medicine Hat College** offers a four year Bachelor of Applied Science degree program in Ecotourism and Outdoor Leadership with a two year diploma option. The entrance requirement is a high school diploma with an average of at least 60 per cent in English Language Arts 30-1 and Social Studies 30, and a passing mark in any Grade 12 science course (Biology 30 recommended). Medicine Hat College also offers a two year Travel and Tourism Management diploma program.
- **Mount Royal College** in Calgary offers a four year applied degree program in Ecotourism and Outdoor Leadership. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1, Biology 30 and three other appropriate Grade 12 subjects (Social Studies 30 recommended).
- The **University of Alberta** in Edmonton offers a four year BA degree program in Recreation, Sports and Tourism. The entrance requirement is a at least 60 per cent in English 30 plus four other approved Grade 12 subjects (Biology 30 and Social Studies 30 recommended).

For information about other post-secondary programs related to recreation, see the Recreation Co-ordinator/Supervisor occupational profile.

Continuing education programs often are offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most hunting/fishing guides and mountain guides are self-employed or employed by outfitters. White-water rafting guides are self-employed or employed by speciality companies in river rafting.

Many outdoor sport and recreation guides work from May to October and find other employment during the winter months. The growing popularity of helicopter skiing has created new employment opportunities for mountain guides in the winter months. The slack periods for mountain guides are spring and fall.

In large organizations, experienced outdoor sport and recreation guides may move into supervisory positions.

In Alberta, over 75 per cent of the outdoor sport and recreation guides work in the following industries:

- **Accommodation and Food Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Outdoor Sport and Recreation Guides occupational group which is expected to grow up 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings for outdoor sport and recreation guides vary considerably, partly because their fees vary and partly because they may be paid only for the days they work. The earnings of self-employed guides also depend on their ability to attract and retain clients. Many guides work at other jobs to ensure a steady income.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Outdoor Sport and Recreational Guides occupational group ranged from **$16,500 to $37,000 a year.** The average salary was **$26,100 a year**.

Painter and Decorator

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Painters and decorators apply paint, wall coverings and other finishes to interior and exterior surfaces of buildings and other structures.

NOC Number(s): 7294
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Duties may vary from one position to another but, in general, painters and decorators:

- estimate the quantity of materials required by measuring surfaces or review work orders
- remove old coatings by stripping them with solvents, heat, sanding, wire brushing, water or sand blasting techniques
- prepare the surface for covering by cleaning it, filling nail holes and cracks, and sanding rough spots
- apply an undercoat primer or sealer before painting, or apply sizing before wallpapering
- match specified colours by using premixed paints, or by mixing colour and pigment with oil, and thinning and drying additives
- use brushes, rollers or spray guns to apply liquid coatings such as paint, stain or varnish to surfaces of wood, metal, brick, concrete, plaster, stucco or stone
- sandblast and apply industrial coatings
- apply finishes that are sponged, ragged and layered
- apply paper, or natural and synthetic fabric wall coverings, fire-proof and fire retardant coatings.

Working Conditions

Painters and decorators try to arrange their work so they will be outdoors in late spring, summer and early fall and indoors in the late fall and winter. They must stand for long periods of time often working with their arms raised over their heads. There is some risk of injury due to falling off ladders, scaffolds or swing stages, and working with hazardous chemicals such as paint thinners and removers.

Painters and decorators may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Painters and decorators need the following characteristics:

- good colour sense
- manual dexterity
- the ability to work in high places
- physical strength and stamina
- the ability to keep up to date with changing technology and product changes
- the ability to do precise and thorough work.

They should enjoy doing work that involves variety and creativity.

Educational Requirements

To work in Alberta, painters and decorators must be ONE of the following:

- registered apprentices

- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,300 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Painter and decorator apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Painters and decorators are employed by:

- contractors involved in new construction, repair, alteration or remodelling work
- organizations that own or manage large buildings such as apartment complexes or schools.

Many painters and decorators are self-employed.

Experienced painters and decorators may advance to supervisory positions with painting and decorating contractors, or set up their own small businesses. Alberta certified journeyman painters and decorators who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as painters and decorators work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,900 Albertans are employed in the Painters and Decorators occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentices earn 55 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 85 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$16 to $30 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Painters and Decorators occupational group working part-time or full-time earned from **$16,900 to $63,200 a year.** The average salary was **$40,200 a year.**

Painter/Printmaker

Produced JULY 2005

Painters and printmakers express artistic ideas in original paintings, mixed media drawings, etchings and other two-dimensional artistic works.

NOC Number(s): 5136.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O m**

Duties

Contemporary two-dimensional art can range in size from a postage stamp to a whole wall. Artists generally produce one or a limited number of copies of each piece of work.

Painters use brushes, palette knives and specialized tools to apply colour to a variety of surfaces (e.g. canvas, wood, metal, paper, paper-pulp board). In general, painters may:

- paint with a variety of media (e.g. water colours, acrylics, oils, tempera, gouache, encaustic)
- create drawings using a variety of media (e.g. charcoal, chalk, graphite, coloured pencils, inks, pastels)
- glue or laminate various materials to a surface to create an image
- specialize in particular types of media or mixed media.

Printmakers create surfaces which are then used to print a limited number of the same image on other materials (e.g. paper, fabric). A variety of methods may be used to create images and transfer them to other surfaces including:

- intaglio - uses images on metal plates (e.g. produced by etching or engraving) that are transferred via a specialized press
- relief - uses linocuts, wood cuts, wood engraving, stone prints and clay prints that can be transferred by press or hand rubbing
- lithography - uses very heavy stones or metal plates as a printing surface and requires a specialized lithographic printing press
- stencil - stencil prints involve dabbing or brushing ink or paint through cut stencils; silkscreening uses screens, a work support and hand held squeegees
- monotype - uses single images created on a printing surface by hand painting and printed on a press or by hand rubbing
- electronic/digital - uses computer paint and photo programs and photocopying or computer printing.

Objective artists may:

- travel to paint specific people or objects (e.g. landscapes, buildings, wildlife)
- work from photographs
- work with models, still life, animals or flowers.

Nonobjective painters create their own subjects and designs.

Many artists are continually studying and learning different techniques and experimenting with different materials and mediums. They need to keep up to date with what is going on in the art world by reading, attending exhibits at art galleries and talking to other artists.

Working Conditions

Working conditions such as hours of work vary considerably for painters and printmakers. Printmaking and moving large paintings can be physically demanding. Some techniques involve working with hazardous chemicals.

Studios may be clean and well ventilated, or they may have less than ideal working conditions. Many artists work at home; others rent space in artist-run centres, warehouses or store-fronts in low rent districts.

Personal Characteristics

Painters and printmakers need the following characteristics:

- self-discipline and determination
- self-promotion and marketing skills
- artistic talent and creativity
- technical ability.

They should enjoy working independently.

Educational Requirements

There are **no formal education requirements** for painters and printmakers. However, they must have a portfolio of work that includes samples or good quality slides of their best work.

In addition to artistic skills and knowledge of form, line, composition and balance, painters and printmakers need technical knowledge about materials. They must be knowledgeable about printing, solvents, acids and inks. Knowledge of safety issues is critical, as is training in the use of materials and equipment (e.g. presses).

Increasingly, it is important for both painters and printmakers to have business skills, particularly marketing skills. Art conservation knowledge and photography, mounting and framing skills are definite assets.

There are a number of college and university programs that offer training in fine art and visual communications. Prospective students should look for the schools that have the best blend of technical and creative course materials for their particular interests.

In Alberta, fine art programs are offered by the following post-secondary institutions:

- **Alberta College of Art and Design** in Calgary
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Keyano College** in Fort McMurray
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Red Deer College**
- **University of Alberta** in Edmonton and Camrose
- **University of Calgary**
- **University of Lethbridge.**

Admission requirements vary from one institution and program to another but generally include a high school diploma with English Language Arts 30-1 (or English 30) and four other appropriate Grade 12 subjects. Some institutions require a minimum acceptable average (ranging from 60 to 80 per cent depending on the program) in specified courses and submission of a portfolio of previous work.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

The **Banff Centre for the Arts** offers winter and summer programs for experienced painters and printmakers. In addition to a statement of artistic objectives, a portfolio of work is required.

Employment and Advancement

(section revised JANUARY 2006)

Few painters can support themselves from commissions on their art work alone. Many also work full-time or part-time as illustrators, designers, teachers (art classes), gallery assistants, framers or arts administrators.

Painters and printmakers may display their art in:

- galleries and museums
- restaurants and clubs
- office buildings and public spaces
- parks, exhibit grounds and international expositions.

They also may market their work electronically through television or the Internet.

Artists' works may be published as fine art poster prints. Publishers may pay a royalty per print sold or simply purchase

copyright for the work.

Emerging artists usually attract the attention of gallery owners or agents by entering art competitions or festivals, or arranging their own shows in homes or artist-run centres. It helps to get some media attention for art shows.

The **Alberta Foundation for the Arts** and the **Canada Council** offer grants to promising artists to enable them to study and work for a few months or a year at a time. The Foundation buys the art of emerging and established artists with the intent of maintaining a diverse cross-section of Alberta art and the Canada Council purchases work for the Art Bank.

Painters/printmakers are part of the larger National Occupational Classification 5136: Painters, Sculptors and Other Visual Artists. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,350 Albertans are employed in the Painters, Sculptors and Other Visual Artists occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since painters/printmakers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for painters/printmakers.)

Salary

Art prices vary considerably depending on the artist's reputation, size of the piece and availability of the artist's work. Most galleries charge a commission ranging from 40 to 75 per cent of the price of a sale.

Many artists only make a minimal income from their art.

Some painters receive commissions or fees paid in advance that allow them to buy materials and cover some living expenses while they finish a site-specific or major work. Well established artists may hire agents or work with exclusive dealers who handle marketing, bookkeeping and sales.

Paralegal

Produced OCTOBER 2005

Paralegals do independent legal work under the general supervision of lawyers. They perform routine legal and administrative functions and assist lawyers with more complex matters.

NOC Number(s): 4211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S I**

Duties

Under the direction and supervision of one or more lawyers, paralegals may:

- draft legal documents such as pleadings, wills, real estate documents, interlocutory applications and corporate documents
- draft and follow up correspondence
- submit documents for registration with appropriate agencies (e.g. Corporate Registry, Land Titles, Provincial Court)
- conduct tax, land title and other legal searches
- assist with real estate, mortgage, estate administration, corporate, tax and intellectual law transactions
- assist in various aspects of personal injury litigation, civil litigation and family law
- organize documents
- attend Examinations for Discovery and court proceedings to assist lawyers with document management and retrieval
- assist in preparation for and, in some cases, attend business transaction closings
- interview witnesses and assemble documentary evidence for trials
- act as a liaison between clients and lawyers when lawyers are unavailable
- develop office procedure and computer functions to improve efficiency
- perform related administrative functions.

Working Conditions

Paralegals work in an office environment. They usually work a standard work week but must be prepared to work overtime to meet deadlines.

Personal Characteristics

Paralegals need the following characteristics:

- excellent communication skills
- the ability to think logically and analyze information
- the ability to organize work and co-ordinate other people's activities
- the ability to pay careful attention to details
- the ability to handle deadlines and periods of stress
- the ability to work with a minimum of supervision.

Since much of their work concerns clients' private affairs, paralegals must be honest, trustworthy and have a sense of responsibility and respect for the confidentiality of client information.

They should enjoy compiling information, working with people and exploring things in depth.

Educational Requirements

Paralegals need related post-secondary education or equivalent experience. Strong keyboarding, writing, editing, word processing and computer skills are required.

In Alberta, the following institutions offer related **two year** diploma programs. For information about related programs of **one year** or less, see the Legal Secretary occupational profile.

- **Bow Valley College** in Calgary offers a two year Legal Assistant diploma program. The entrance requirement is high school diploma with English Langauge Arts 30-2 and Grade 10 math, or equivalent. Bow Valley College also offers a part-time Legal Administrative Assistant program that includes nine courses (21 hours each).
- **Grant MacEwan College** in Edmonton offers a two year Legal Assistant diploma program that is also available part-time (evenings). The entrance requirement is a high school diploma or equivalent. Applicants must successfully complete an English appraisal (or have at least 65 per cent in English Language Arts 30-1 or English 30, or 75 per cent in ELA 30-2 or English 33) and a keyboard entrance test (30 words per minute with no more than six errors).
- **Red Deer College** offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent. The College also offers a Legal Focus Certificate program for students currently employed in a legal environment.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Legal Assistant diploma program. The entrance requirement is a high school diploma or equivalent. A typing speed of at least 30 words per minute is recommended.

Continuing education programs are often offered on an as needed basis.

For more information about programs and mature student admission policies, please check post-secondary calendars or websites.

Prior to enrolling in a formal training program, prospective students should contact the program(s) of their choice, the Law Society of Alberta, the Canadian Bar Association (Alberta Branch), the Alberta Association of Professional Paralegals or a sampling of law firms and other potential employers to investigate the suitability of the program and current employment prospects for graduates.

The **Legal Education Society of Alberta (LESA)** offers professional development courses for those who are already employed in legal support staff positions.

Employment and Advancement

(section revised JANUARY 2006)

Paralegals work under the supervision of lawyers in law firms, court systems and the legal departments of large organizations. Graduates of Legal Assistant education programs are usually hired as legal assistants. Full paralegal status and responsibility usually requires additional work experience.

Paralegals are part of the larger National Occupational Classification 4211: Paralegal and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 5,550 Albertans are employed in the Paralegal and Related Occupations group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 100 to 160 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since paralegals form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for paralegals.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for legal assistants and paralegals vary considerably depending on location, employer and the person's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Paralegal and Related Occupations group working part-time or full-time earned from **$17,400 to $113,600 a year**. The average salary was **$37,000 a year**.

Park Warden

Produced JANUARY 2006

Park wardens are responsible for natural and cultural resource management, public safety and law enforcement in Canada's national parks.

NOC Number(s): 2224
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M S**

Duties

Park wardens have the following primary responsibilities:

- research, monitor and manage heritage resources in national parks
- provide first aid and search and rescue services to the public and park staff
- enforce the Canada National Parks Act and regulations
- assist in the protection of the heritage resources of the park
- serve as public spokespersons regarding changes, threats and activities in parks.

To accomplish these objectives, they have the following duties and responsibilities:

- monitor and manage resources
- conduct research related to resource management
- co-ordinate forest fire suppression activities
- supervise and train park employees
- offer information and assistance to park visitors, residents and staff
- conduct search and rescue operations as needed
- respond to correspondence, complete reports and prepare budgets
- contribute to park management and operational plans
- supervise the construction or repair of facilities and maintenance of equipment
- conduct statistical surveys
- enforce specific laws and regulations.

Park wardens frequently patrol front and back-country areas of the park by truck, boat or plane, or on foot, skis or horseback. They watch for potential hazards and assess the condition of the park, its wildlife and other natural resources.

Park wardens are trained in first aid and rescue techniques, and respond when people are lost, injured or endangered. They work in co-operation with police, provincial conservation officers, and other resource management and enforcement agencies.

Park wardens spend much of their time implementing resource management plans and conducting environmental assessments to ensure the continued health of park ecosystems. This involves research, monitoring wildlife, capturing animals and relocating them in rare instances when they pose a public safety hazard. In some national parks, park wardens may specialize in resource management, law enforcement or public safety.

Working Conditions

Park wardens work both indoors and outdoors in all types of weather conditions and terrain. Some risk is involved in capturing and handling animals and enforcing regulations. Lifting up to 25 kilograms is routinely required; heavier lifting may be required in some circumstances.

The work may be seasonal or year round. To deal with emergencies, park wardens may be required to be on call during off-duty hours.

Personal Characteristics

Park wardens need the following characteristics:

- a keen interest in all aspects of nature and a serious concern for the environment
- communication skills, tact and self-confidence
- the ability to cope with heavy workloads
- good health and physical conditioning
- an aptitude for outdoor travel such as driving, hiking and riding
- the ability to take on a leadership role and remain calm in stressful situations.

They should enjoy:

- working outdoors in various geographic and weather conditions
- taking responsibility for projects, individually or as part of a team
- compiling information and gathering data and samples
- working with people.

Educational Requirements

The minimum education requirement for park wardens is a recognized bachelor of science degree with an emphasis on natural sciences. Conditions of employment include:

- a valid driver's license
- a valid first aid certificate
- Pleasure Craft Operators Card
- Canadian Firearms Safety Course
- no criminal record.

Experience and expertise in hiking, skiing, boating, mountain climbing, wilderness camping and horseback-riding are definite assets.

In Alberta, the following post-secondary institutions offer recognized programs related to environmental management and conservation enforcement:

- The **University of Alberta** in Edmonton offers a four year Bachelor of Science degree program in Environmental and Conservation Sciences with specializations in conservation biology, environmental economics and policy, land reclamation, and human dimensions of environmental management. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Chemistry 30, Biology 30 and one other Grade 12 subject. The University of Alberta also offers a four year B.Sc./BA combined degree program in Environmental and Conservation Sciences/Native Studies.
- The **University of Calgary** offers a four year Bachelor of Science degree program in Environmental Science. The entrance requirement is a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Chemistry 30, one of the following: Biology 30, Physics 30 or Math 31 (Biology 30 is required for the Biological Sciences concentration), and another 30 level subject selected from an approved list (Math 31 recommended). Students also must complete at least four full courses with a grade point average of at least 2.80/4.
- The **University of Lethbridge** offers a four year Bachelor of Science degree program in Environmental Science that includes one semester of technology training at Lethbridge Community College. The entrance requirement is an average of 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30, or Applied Math 30 and 75 per cent in Athabasca University's Math 101), Biology 30, Chemistry 30 and one other approved Grade 12 subject. Math 31 may be recommended. An approved diploma in a field related to environmental science is required for post-diploma admission.

Post-secondary institutions throughout the province offer diploma and university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Park wardens are employed by the federal government. On average, 15 to 20 new wardens are hired across Canada each year.

Many post-secondary students gain valuable experience by working in national parks during the summer. They may work as seasonal groundskeepers, equipment operators, maintenance workers, lifeguards, gate attendants or interpretive assistants. Student positions related to warden service include researcher, initial attack (fire) crew, non-native plant crew and patrol person.

Newly employed park wardens gradually take on more responsibility and may advance to more specialized positions in larger parks. Advancement to specialist positions may require a master's degree and considerable experience.

Park wardens are part of the larger National Occupational Classification 2224: Conservation and Fishery Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Forestry and Logging**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Conservation and Fishery Officers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since park wardens form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for park wardens.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for park wardens range from $46,000 to $60,000 a year depending on their employment status (seasonal or full-time), responsibilities and qualifications (2006 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conservation and Fishery Officers occupational group working part-time or full-time earned from **$35,900 to $55,700 a year.** The average salary was **$51,400 a year.**

Parole/Probation Officer

Produced APRIL 2003

Parole officers and probation officers help offenders integrate into the community and, at the same time, protect the community by supervising offenders. Parole officers are employed by Correctional Services Canada to manage the conditional release of federal and provincial offenders. Probation officers are employed by Alberta Solicitor General to conduct investigations and prepare predisposition and presentence reports, and supervise offenders in the community.

NOC Number(s): 4155.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M D**

Duties

Duties vary from one position to another but, in general, parole officers:

- make recommendations regarding the initial placement of an offender in an appropriate federal penitentiary (for any offender who receives a sentence of two years or more, or a suspension of an original federal sentence)
- investigate offenders' past and present behaviours by interviewing other inmates, institutional authorities, police, family and friends of the offender
- plan programs for offenders during their imprisonment
- assess the suitability of penitentiary inmates for release under parole and statutory release, and submit recommendations to the National Parole Board
- develop liaisons and networks with other parole officers, social welfare and community agencies, staff in correctional institutions, psychiatric facilities and after care agencies
- supervise those who have already been released on parole, day parole or statutory release
- offer guidance and direction to parolees in dealing with job-related and personal problems.

Those working in the private sector are called parole supervisors. They are contracted to supervise parolees who live in communities and rural areas where Correctional Services Canada does not maintain an office.

In general, probation officers:

- prepare predisposition and presentence reports, as requested by the court, which describe the convicted offender's personal and social life, and make recommendations for sentence including conditions which may be imposed by a court order
- gather information through interviews with offenders, police, family, friends, employers, school authorities, etc. as a basis for the court to determine an appropriate sentence and to assist in casework and the supervision of offenders
- supervise individuals who have been released on a pretrial release; sentenced by the court to probation, community service work or conditional sentences/supervision; or released by a correctional or young offender centre on a temporary pass
- administer and supervise individuals accepted to the alternative measures, extra judicial sanctions and fine option programs.

Parole and probation officers must be aware of available community resources such as psychiatric services and addiction treatment centres, in addition to having a working knowledge of client behaviour and motivation.

Working Conditions

Parole and probation officers work in offices, courthouses and, in the case of parole officers, penitentiaries. They may also visit offenders' homes and workplaces. They sometimes work long hours, including some evenings and weekends, to interview offenders and their associates.

Personal Characteristics

Parole and probation officers need the following characteristics:

- maturity and good judgement
- strong interpersonal skills
- strong verbal and written communication skills for writing and presenting reports.

They should enjoy dealing with and helping people, having clear rules and organized methods, and supervising others.

Educational Requirements

(section revised SEPTEMBER 2005)

Parole officers employed by the federal government must have at least a **bachelor's degree** in Arts (BA) with a specialization in sociology, psychology or criminology, or in Social Work (BSW). Some parole officers have a master's degree or equivalent. Candidates for federal government positions must be able to pass the Canada Fitness Test which includes standards for muscular strength and endurance, flexibility and cardio-respiratory fitness.

Parole supervisors employed in the private sector must have at least a **two year college diploma** in a related field.

Probation officers employed by the provincial government must have at least a **two year diploma or a university degree in a directly related field.** An equivalent combination of education and experience may be accepted.

Knowledge of native culture or languages is an asset for parole and probation officers.

In Alberta, the following post-secondary education institutions offer diploma and degree programs that are at least two years in length and specifically in criminology or corrections. For information about other related degree programs, see the Psychologist, Sociologist and Social Worker occupational profiles.

- **Athabasca University** offers a four year Bachelor of Professional Arts degree program in Criminal Justice. This program is available to students who have a two-year diploma in criminal justice-related areas from an accredited college or technical institute program.
- **Bow Valley College** in Calgary offers a two year Correctional Services diploma program. The entrance requirements are a high school diploma with English 30 (30-1) or 33 (30-2) or equivalent.
- **Grant MacEwan College** in Edmonton offers a two year Correctional Services diploma program that is also available part-time and through distance delivery. Applicants must have a high school diploma with at least 65 per cent in English 30 or 75 per cent in English 33, or equivalent, and be at least 18 years of age.
- **Lethbridge Community College** offers a two year Corrections Diploma program and a Bachelor of Applied Arts - Corrections Studies program. The entrance requirement for the diploma program is a high school diploma or equivalent. The entrance requirement for the degree program is successful completion of the diploma program or equivalent. Lethbridge Community College also offers a Criminal Justice certificate designed for aboriginal people.
- **Mount Royal College** in Calgary offers a four year applied degree program in Justice Studies. The entrance requirement is a high school diploma with English 30, Pure or Applied Math 30 and Social Studies 30, or equivalent.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Arts degree program in criminology. The entrance requirement is completion of one year of an undergraduate degree program (usually an Arts program) with a minimum grade point average of 6.0/9. This is a quota program so higher than minimum marks may be required for admission.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Parole officers are employed by Correctional Services Canada and private agencies under contract to Correctional Services Canada. Those employed by Correctional Services Canada must complete a probationary period of one year. Advancement to section supervisor and area manager positions is based on merit and experience.

Probation officers are employed by the government of Alberta.

Parole and probation officers are part of the larger National Occupational Classification 4155: Probation and Parole Officers and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Probation and Parole Officers and Related Occupations group which is expected to grow grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since parole and probation officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for parole and probation officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Probation and Parole Officers and Related Occupations occupational group working part-time or full-time earned from **$20,600 to $68,100 a year.**

Parts Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Parts technicians dispense parts and manage inventories of automotive, heavy duty, farm implement, industrial, recreational vehicle, jobbers, plumbing, electrical or other parts.

NOC Number(s): 1472
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O S**

Duties

Duties and responsibilities vary depending on the size and type of business (wholesale, retail or warehouse distribution business) and the types of parts involved. Some businesses specialize in a particular type of equipment such as automotive parts; others stock hardware supplies as well as parts for several makes of machinery. However, in general, parts technicians:

- sell supplies and parts
- order parts and keep inventories
- receive supplies and store them according to a pre-arranged system
- organize and ship exchange parts and returns
- keep price lists and catalogues updated
- prepare statements
- submit bills
- keep records
- receive payments.

Parts technicians may be responsible for stock handling, warehousing and identifying and cataloguing parts and assemblies as well as ordering, receiving, inspecting, sorting, pricing and selling.

Working Conditions

Parts technicians may work indoors or outdoors. Working hours vary depending on the industry. Parts technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Parts technicians need the following characteristics:

- good customer service skills
- basic math skills
- the ability to pay careful attention to details such as parts catalogues and electronic inventory systems.

They should enjoy working with people.

Educational Requirements

To work in Alberta, parts technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Some employers require their parts technicians to have working experience with the type of product sold (e.g. automotive or farm implement parts) so they can answer customer questions about product use.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training in first year and a minimum of 1,575 hours of on-the-job training and six weeks of technical training in the second and third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Parts technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Lakeland College in Vermilion
- Lethbridge Community College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Weekly apprenticeship training (WATS) is also offered by Lethbridge Community College, NAIT and SAIT.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Parts technicians are employed by wholesale and retail businesses, or warehouse distributors that deal with all types of parts. Apprentice parts technicians may begin working as a stock or receiving clerk (for more information, see the Shipper and Receiver occupational profile) or as drivers. As they become acquainted with the different parts and their applications and the stockroom system, they can be promoted to parts counter positions.

Experienced parts technicians who have business and technical experience may advance to supervisory positions, such as parts department manager, store manager or even store owner. Alberta certified journeyman parts technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training. With some sales experience, a parts technician can move into a sales representative position.

Parts technicians are part of the larger National Occupational Classification 1472: Storekeepers and Parts Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Retail Trade**
- **Wholesale Trade**
- **Public Administration**
- **Transportation and Warehousing**
- **Oil and Gas Extraction**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,500 Albertans are employed in the Storekeepers and Parts Clerks occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since parts technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for parts technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

An apprentice parts technician earns at least 65 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 85 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$13 to $25 an hour plus benefits**, based on local market conditions (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Storekeepers and Parts Clerk occupational group working part-time or full-time earned from **$13,900 to $95,000 a year.** The average salary was **$35,100 a year.**

Pathologist

Produced DECEMBER 2004

Pathologists are physicians who diagnose diseases such as cancer and provide key laboratory diagnostic services. Some pathologists also play a key role in forensic investigations.

NOC Number(s): 3111.2
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I O D**

Duties

Pathologists use a wide variety of laboratory analytical techniques (e.g. light and electron microscopy, analytical chemistry, culturing micro-organisms and cells, molecular genetics) to investigate the causes, progress and consequences of diseases, and determine the nature of diseases. They provide diagnoses to patients' surgeons and physicians, and advise physicians regarding the management of diseases (e.g. cancer, anemia and diabetes) and infections (e.g. AIDS). Often, attending physicians' treatment decisions are based on pathologists' recommendations.

In general, pathologists:

- supervise or perform laboratory diagnostic and screening tests
- examine tissue biopsy samples and diagnose surgical specimens
- advise other health care workers on the application and usefulness of newly available tests
- conduct autopsies to determine the causes and mechanisms of illness and death
- conduct research
- teach medical students and pathologists-in-training
- educate trainees and practicing physicians regarding the use of laboratory services
- lead and provide guidance in the use of information technology in medical practice
- lead quality and utilization management activities in hospitals.

Pathologists specialize in general pathology or subspecialties such as:

- **anatomical pathology** - diagnosing disease by examining tissues or cytologic preparations
- **forensic pathology** - determining the cause of death
- **hematopathology** - diagnosing diseases of blood, bone marrow and lymph nodes, and providing consultative services regarding the use of blood or blood products for transfusion
- **medical biochemistry** - supervising the chemical section of medical laboratories and diagnosing disease from chemical test results
- **medical microbiology** - identifying causes of infection and recommending treatments, and providing consulting services or supervising hospital infection control and surveillance programs
- **neuropathology** - diagnosing nerve, brain and muscle diseases.

Working Conditions

Pathologists work in hospital and community laboratories as part of a team with other pathologists, scientists and medical laboratory technologists. They may be exposed to infectious agents in a controlled setting.

Personal Characteristics

Pathologists need the following characteristics:

- the intellectual ability required to successfully complete the academic training and keep up to date with new developments in medicine
- emotional strength and maturity
- good communication and interpersonal skills

- an interest in teaching others about new developments.

They should enjoy finding solutions to problems, using equipment and instruments to perform tasks requiring precision, and directing the work of others.

Educational Requirements

The education requirement is **a Medical Doctor (MD) degree followed by a minimum of five years** of specialization in laboratory medicine, and successful completion of a Royal College of Physicians and Surgeons of Canada exam.

In Alberta, the following institutions offer MD and specialty training programs.

- The **University of Alberta** in Edmonton offers an MD program and specialty training in general and anatomical pathology, and hematopathology. The entrance requirement for the MD program is satisfactory completion of **at least** two years of university studies with courses in organic and inorganic chemistry, English, physics, biology and statistics.
- The **University of Calgary** offers an MD program and specialty training in anatomic pathology and neuropathology. The entrance requirement for the MD program is completion of at least three years of recommended Arts and Sciences courses at a recognized post-secondary institution.

Because admission to MD programs is based on quotas, many applicants who fulfil the entrance requirements cannot be accepted. Successful applicants are selected on the basis of:

- academic grades
- letters of recommendation
- personal interviews
- the results of a Medical College Admission Test (MCAT).

The required university courses may be taken entirely at the University of Calgary or the University of Alberta or, in part, at other post-secondary institutions.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer. When planning their university studies, prospective students should contact both Faculty of Medicines' admissions offices to ensure that they acquire all of the necessary pre-requisites.

In general, the admission requirement for university and university transfer programs is a high school diploma or equivalent with a specified minimum average in English 30, Pure Math 30 and three other appropriate Grade 12 subjects (usually Biology 30, Physics 30 and Chemistry 30).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Selection of pathology residents is primarily through the Canadian Resident Matching Service.

Other Requirements

Under Alberta's Medical Profession Act, you must be a registered member of the College of Physicians and Surgeons of Alberta (CPSA) to practice medicine in Alberta.

Employment and Advancement

Pathologists work in laboratories in:

- hospitals and universities
- government departments
- the private sector.

Pathologists may be involved in medical research, health care administration, overseas service or teaching in a Faculty of Medicine as well as provide diagnostic services.

Pathologists are employed in the **Health Care and Social Assistance** industry.

Over 100 pathologists are employed in Alberta. There is a current shortage of pathologists in Alberta, Canada and many other countries. This shortage is expected to become more marked as people retire from the occupation and demand for pathologists' services continues to grow due to the demands of Canada's aging population. However, government health care funding for new positions may not meet these needs completely.

Salary

Pathologists negotiate contracts with regional health authorities and other employers.

Pediatrician

Produced NOVEMBER 2004

Pediatricians are specialist physicians who provide medical care for children from birth through adolescence.

NOC Number(s): 3111.1
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S D**

Duties

Pediatricians work with healthy children and children who have acute or chronic health problems. In general, they:

- examine children and assess their health, growth and development
- diagnose problems such as throat and respiratory infections, communicable diseases, cancer, congenital abnormalities or developmental problems
- order laboratory tests, x-rays and other diagnostic procedures
- prescribe medications and treatments, or refer patients to other specialists
- give parents advice on how to treat and prevent illness
- act as consultants for other physicians
- act as advocates for patients and families
- maintain comprehensive medical records.

Pediatricians may work as part of a health care team that includes other doctors, nurses, therapists and medical technologists.

Pediatricians may:

- work in primary care (seeing mostly well children who may have minor illnesses or growth and development concerns)
- work as secondary-level consultants (seeing children who have been referred by other physicians because they need additional expert diagnosis, treatment or care)
- work as tertiary-level consultants in subspecialties such as pediatric cardiology or pediatric neurology
- teach and conduct medical research relating to childhood diseases.

Working Conditions

Pediatricians work in offices, hospitals and universities that are usually located in urban centres. They may work long hours and often are called to the hospital in the evenings and on weekends.

Personal Characteristics

Pediatricians need the following characteristics:

- the intellectual ability required to successfully complete the academic training and keep up to date with new developments in medicine
- the ability to get along with people (especially children)
- emotional strength and maturity
- good communication skills
- leadership skills.

They should enjoy co-ordinating information, dealing with people and directing the work of others.

Educational Requirements

The training required to become a pediatrician is long and academically demanding:

- two to four years of pre-medical university studies approved by a Faculty of Medicine
- a three to four year Medical Doctor (MD) program
- four years of residency in an accredited university department of pediatrics.

In Alberta, MD programs are offered by the following institutions:

- The **University of Alberta** in Edmonton. The entrance requirement is satisfactory completion of at least two years of university studies with courses in organic and inorganic chemistry, biochemistry, English, physics, biology and statistics.
- The **University of Calgary**. The entrance requirement is completion of at least three years of recommended Arts and Sciences courses at a recognized post-secondary institution.

Because these are quota programs, many applicants who fulfil the entrance requirements cannot be accepted. Successful applicants are selected on the basis of:

- academic grades (usually, an A average in pre-medical studies is required to gain admission)
- letters of recommendation
- personal interviews
- the results of a Medical College Admission Test (MCAT).

The required university courses may be taken entirely at the University of Calgary or the University of Alberta or, in part, at other post-secondary institutions.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer. When planning their university studies, prospective students should contact both Faculty of Medicines' admissions offices to ensure that they acquire all of the necessary pre-requisites.

In general, the admission requirement for university and university transfer programs is a high school diploma or equivalent with a specified minimum average in English 30, Pure Math 30 and three other appropriate Grade 12 subjects (usually Biology 30, Physics 30 and Chemistry 30).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

After completing an MD program, prospective pediatricians take an additional four years of post-graduate training. This training usually takes the form of seminars and directed reading programs and residencies with increasing responsibility. Subspecialty training (e.g. in pediatric cardiology or oncology) requires a further one to three years of residency.

Other Requirements

Under Alberta's Medical Profession Act, you must be a registered member of the College of Physicians and Surgeons of Alberta (CPSA) to practice medicine in Alberta.

Employment and Advancement

(section revised JANUARY 2006)

Most pediatricians set up private practices in regional centres. Some are employed by government or education institutions.

Experienced pediatricians may move into medical research, health care administration or teaching in a Faculty of Medicine.

Pediatricians are part of the larger National Occupational Classification 3111: Specialist Physicians. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,600 Albertans are employed in the Specialist Physicians occupational group which is expected to grow 3.5 to 4.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since pediatricians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for pediatricians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Most pediatricians in private or group practice are paid by provincial health insurance programs according to the volume and type of services they provide. Therefore, their earnings vary greatly.

Personal Care Attendant

Produced JANUARY 2005

Personal care attendants provide personal assistance and support services for elderly, disabled, acute or chronically ill people who require short term assistance or ongoing support.

NOC Number(s): 3413, 6471.1
Minimum Education: At least Grade 10
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M o; S M o**

Duties

Personal care attendants work in a variety of settings: private homes, government agencies or group homes, hospitals, continuing care and assisted living facilities. Those who work in private homes may work with a variety of clients in different homes every day or work in one home for an extended period of time.

Personal care attendants have a variety of job titles such as health care aide, personal support aide, client care attendant or home support worker. Whatever their title, they provide the physical and emotional support clients need to be as independent as possible.

Depending on the circumstances and their clients' and supervisors' instructions, personal care attendants may assist clients with a variety of personal care needs:

- dressing
- eating
- bathing and grooming (hair, nails, mouth, foot, skin care)
- going to the bathroom
- moving from one position or place to another
- communicating with family members and others.

They may also:

- perform light housekeeping duties (e.g. make beds)
- do laundry
- cook meals or prepare special dietary foods
- purchase groceries, pick up prescriptions or run other errands
- care for children when parents or other responsible adults are absent or need help
- accompany clients to physicians' offices or on outings.

Where appropriate, personal care attendants may perform tasks delegated by registered nurses or physiotherapists including:

- checking height, weight and vital signs
- changing non-sterile dressings and bandages
- operating special equipment such as lifts, wheelchairs and hydraulic tub seats
- assisting with topical medication or administering medication from dosettes or bubblepacks
- collecting specimens (urine, stool and sputum)
- doing simple range of motion exercises
- applying support garments and medical devices (e.g. braces, artificial limbs, hearing aids, elastic stockings)
- taking care of urinary drainage equipment, ostomy care or bowel routines (enemas, suppositories)
- passing a tube into the bladder to drain urine
- caring for clients receiving oxygen
- testing blood sugars with a glucometer
- keeping records of these activities.

Working Conditions

There is considerable physical activity involved in housekeeping activities and helping people to move, groom themselves and dress. Personal care attendants may be required to lift items weighing up to 25 kilograms or stand for long periods of time. Some knowledge of body mechanics and proper lifting techniques is required to avoid injury.

Other working conditions in this occupation vary greatly. Personal care attendants may work in surroundings ranging from comfortable to deplorable. Some clients may be challenging; others pleasant and co-operative. Dealing with people in pain or those who are unco-operative can be frustrating and stressful.

Hours of work also vary. Since many agencies offer 24 hour service, shift work (including weekends) may be required.

Personal Characteristics

Personal care attendants need the following characteristics:

- good physical and mental health
- mature and dependable
- understanding, patient and non-judgmental
- willing and able to keep information about clients confidential
- able to communicate effectively and get along with people
- able to use tact and judgement in dealing with difficult situations.

Those who work in private homes also must be:

- flexible
- able to work relatively independently
- well organized.

Personal care attendants should enjoy:

- working with and assisting people
- having clear rules and guidelines for their work
- using tools and equipment for routine housekeeping duties.

Educational Requirements

(section revised DECEMBER 2005)

There are **no formal education requirements** for employment in this occupation. However, employers generally require job applicants to have at least Grade 10 reading and comprehension skills, and satisfy security clearance requirements. Most prefer to hire applicants who have related training or experience.

In Alberta, the following institutions offer programs designed to prepare graduates for employment in home, continuing care or hospital settings:

- **Bow Valley College** in Calgary offers a 20-week Health Care Aide and a 16-week Home Care Attendant (Integrated) certificate program.
- **Bredin Institute-Centre for Learning** in Edmonton offers an 18-week Health Care Assistant certificate program and an 18-week Human Services Worker certificate program.
- **Career Designs Inc.**, a private vocational school in Calgary, offers a 14-week Personal Care Attendant certificate program.
- **CDI College of Business, Technology and Healthcare**, a private vocational school in Calgary and Edmonton, offers a 24-week Personal Care Attendant certificate program.
- **Calgary Board of Education Chinook Learning Services** offers an eight-course Community Support Worker Certificate - Personal Care Attendant program.
- **Columbia College**, a private vocational school in Calgary, offers a full-time (10 weeks) and part-time (20 weeks) Personal Care Attendant program. Columbia College also offers a full-time (25 weeks) and part-time (50 weeks) Human Services Professional diploma and certificate programs.
- **Community Care Educational Centre Inc.**, a private vocational school in Red Deer, offers a 16-week Health Care Assistant program.
- **Lakeland College** in Lloydminster offers a 16-week Personal Support Aide Certificate of Achievement program. Graduates may take a second semester to earn a Community Support Worker Certificate.
- **Lethbridge Community College** offers a 20-week Health Care Aide program that includes a six week practicum.
- **Medicine Hat College** offers a Health Care Aide program that may be taken full-time (20 weeks) or self-paced.

- **Nightingale Academy of Health Services Inc.**, a private vocational school in Edmonton, offers a 17-week Health Care Support Worker program.
- **NorQuest College** in Edmonton offers a 20-week Health Care Aide program.
- **Northern Lakes College** offers a 20-week Health Care Aide certificate program. The program is offered in a supported learning model to multiple Northern Lakes College campuses.
- **Pare Labrecque Training Centre**, a private vocational school in Sylvan Lake, offers a 16-week Specialized Geriatric Care Attendant program.
- **Portage College** in Lac La Biche offers a 20-week Health Care Aide program.
- **Red Deer College** offers a 20-week Health Care Aide program.
- **Reeves College**, a private vocational school in Edmonton, offers a 40-week Community Health Care program.
- **Robertson College**, a private vocational school in Calgary, offers a 20-week Health Care Aide/Personal Support Worker program.
- **Sprott-Shaw Community College**, a private vocational school in Calgary and Edmonton, offers a 27-week Resident Care Attendant program and a 50-week Community Support Worker program.
- **The Excel Academy**, a private vocational school in Edmonton, offers a 17-week Community Support Worker program.
- **TLC Edmonton: Training for Live-in Caregivers**, a private vocational school in Edmonton, offers a 26-week TLC Edmonton: Training for Live-in Caregivers program.
- **Training Inc.**, a private vocational school in Lethbridge, offers a 12-week Health Care Aid program.
- **University of Alberta** in Camrose offers a part-time (evenings) Personal Care Aide/Attendant certificate program.

Admission requirements vary from one program to another but, in general, applicants must:

- be at least 18 years of age
- have a high school diploma or equivalent, or qualify for mature student admission and have Grade 10 or better reading and writing skills
- have Standard First Aid, Heart Saver or CPR certification
- provide a security clearance or child welfare check
- attend an interview.

Applicants also may be required to submit an immunization record, letters of reference or a copy of their driver's license.

Other pre-employment, continuing education and in-service training programs are offered by a variety of organizations across Alberta on an as-needed basis. Prospective personal care attendants are advised to discuss training options with several local employers before choosing a program.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Personal care attendants are employed by:

- clients
- private agencies
- continuing care facilities
- government social service departments and agencies
- non-profit charitable agencies
- home care and family service associations
- hospitals.

Those who have considerable experience may move into supervisory or management positions. However, advancement opportunities are limited without additional education.

Personal care attendants are part of the larger National Occupational Classification 6471: Visiting Homemakers, Housekeepers and Related Occupations. In Alberta, most people employed in this classification work in **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,200 Albertans are employed in the Visiting Homemakers, Housekeepers and Related Occupations group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for personal care attendants vary considerably depending on the employer and the employee's responsibilities, experience and training.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Visiting Homemakers, Housekeepers and Related Occupations group working part-time or full-time earned from **$9,900 to $30,800 a year.** The average salary was **$18,500 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Personal Property/Equipment Appraiser

Produced DECEMBER 2003

Personal property and equipment appraisers estimate the value of personal and household items, business assets, vehicles and/or machinery, and prepare reports for owners, buyers, insurance companies, lending institutions, government departments, lawyers, creditors and others.

NOC Number(s): 1235.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in A!berta
Interests: **M d s**

Duties

Personal property appraisers may judge the worth of several types of personal property or specialize in goods such as antiques and collectibles, works of art, jewellery, commercial and business assets, stamps and coins, musical instruments, watches and clocks, dolls and toys, fabric goods, firearms or old books. Equipment appraisers judge the worth of automobiles, trucks and/or heavy equipment.

Their duties and responsibilities vary depending on their area of specialization but, in general, personal property and equipment appraisers:

- inspect goods in people's homes, businesses or other places
- note age, style and overall condition
- look for flaws that may or may not decrease the value of an item
- determine if items are originals or copies, where appropriate
- gauge the appeal of items to potential buyers at auctions or estate sales
- consult reference materials such as catalogues and directories, when required
- write reports describing items and estimating fair market value, replacement or reproduction value, or liquidation value (if required for settling debts)
- defend their appraisals in court, when required.

Working Conditions

Personal property and equipment appraisers work in a wide variety of environments ranging from farm sheds to high rise office towers. Their hours of work also vary. Those employed by insurance companies, lending institutions or auction houses may work standard business office hours with occasional evening or weekend work required. Self-employed appraisers often work long, irregular hours that include evenings, weekends and holidays.

Personal Characteristics

Personal property and equipment appraisers need the following characteristics:

- honesty and integrity
- tact and good communication skills
- good decision-making skills and a willingness to accept responsibility for decisions
- the ability to deal effectively with people who may be under a great deal of stress
- the ability to remain objective when pressured by property owners who want to influence appraisal values
- the ability to maintain client confidentiality.

They should enjoy analyzing information to determine values and dealing with all kinds of people.

Educational Requirements

Personal property appraisers and equipment appraisers need a **combination of related post-secondary education and years of experience in their area(s) of specialization**. For example, fine art appraisers need a bachelor's or master's degree in art history plus experience working in art galleries or museums. Jewellery appraisers need a diploma or certificate from a recognized school plus related work experience. Equipment appraisers need years of related sales and technical experience. Appraisers' qualifications are often examined in court to establish the appraiser's credibility as an expert witness.

Prospective appraisers should discuss their career and education plans with people working in the relevant personal property appraisal field before enrolling in an education program.

Post-secondary education institutions throughout Alberta offer certificate, diploma and degree programs and university transfer programs. For information about education programs related to jewellery, see the Gemmologist and Jeweller occupational profiles.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Personal property and equipment appraisers may be employed by:

- auction houses
- art galleries
- antique shops
- second hand stores
- retail jewellery stores
- appraisal firms
- lending institutions
- insurance companies.

Self-employed appraisers may provide services for any of the above or for property owners who want to value their property before dissolving a marriage or partnership, insuring property, selling it, using it as collateral for loans, or making tax-deductible charitable donations. Self-employed appraisers must pay business overhead costs from their earnings and should have errors and omissions insurance. Work in some specializations (e.g. antique automobiles) may be seasonal in Canada.

Personal property and equipment appraisers usually start their careers in other occupations and move into the appraisal field after gaining related expertise. For example, they may start in new or used goods retail outlets, auction houses, museums or art galleries. In large organizations, experienced appraisers may move into supervisory or management positions. For self-employed appraisers, advancement generally takes the form of building a reputation and larger client base.

Personal property appraisers are part of the larger National Occupational Classification 1235: Assessors, Valuators and Appraisers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Finance, Insurance and Real Estate**
- **Public Administration**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above),
- **location** in Alberta,
- **employment turnover** (work opportunities generated by people leaving existing positions),
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before), and
- **size of the occupation**.

Over 1,350 Albertans are employed in the Assessors, Valuators and Appraisers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since personal property and equipment appraisers form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for personal property and equipment appraisers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Appraisers' earnings vary considerably, depending on the types of property they appraise and their experience and qualifications. Self-employed appraisers charge a fee for each appraisal based on the time it takes to do the appraisal, the distance travelled and the type of report required.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Appraisers occupational group earned **up to $136,700 a year.** The average salary was **$52,900 a year.**

Most personal property and equipment appraisers earn considerably less than the top of this range suggests.

Pest Control Operator

Produced MARCH 2005

Pest control operators use a variety of methods to control and prevent the spread of insects and other pests that may infest private homes, restaurants, warehouses, business establishments and surrounding areas.

NOC Number(s): 7444
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M I

Duties

In general, pest control operators:

- inspect buildings and surrounding areas to detect signs of infestation by insects or other pests (e.g. rodents or pest bird species)
- monitor the area to determine if treatment is necessary
- determine the type of treatment necessary (sanitation, exclusion or habitat modification) and the cost to the client
- treat the infested area with the appropriate pesticide or set sticky or mechanical traps.

When working with toxic materials, pest control operators must observe safety precautions such as:

- taking care to prevent pesticide being placed where children, pets or other non-target animals may come in contact with it
- wearing rubber gloves, protective clothing and respirators when mixing or handling pesticides to prevent skin contact and to avoid breathing in pesticides

Pest control operators generally have assigned routes. On that route, they are responsible for sales work, informing customers about conditions that attract pests and conducting periodic inspections to detect signs of possible re-infestation.

Working Conditions

Because insects, rodents and birds are most active in spring and summer, pest control operators are busiest during those seasons. Most work is done during the day but some customers want the work done in the evenings or on weekends when their operations are closed to the public.

Pest control operators work indoors and outdoors in all kinds of weather. Occasionally, they may have to crawl into dirty or dusty places to check infestation sources and administer the necessary treatments, or lift items weighing up to 25 kilograms. Safety precautions are required when handling toxic materials. Yearly medical examinations and blood tests are recommended.

Personal Characteristics

Pest control operators need the following characteristics:

- good health and stamina with no physical conditions such as asthma, bronchitis or high blood pressure
- good communication and interpersonal skills for dealing with customers.

They should enjoy operating mechanical and electric sprayers, having clear rules and organized methods for their work, and working with people.

Educational Requirements

Pest control operators are **trained on the job.**

Employers generally prefer to hire applicants who are at least 18 years of age and have a high school diploma with courses in biology and a valid driver's licence.

Other Requirements

In Alberta, anyone applying a commercial pesticide (insecticide, herbicide, fungicide, etc.) must be certified or supervised by someone who is certified.

To become a certified structural pest control pesticide applicator, an individual must successfully complete Lakeland College's Legislation and Safety core course and **either** the nineteen lesson Purdue Pest Control Technology Correspondence Course **or** the British Columbia Structural Integrated Pest Management Pesticide Applicator Certificate.

Employment and Advancement

(section revised JANUARY 2006)

Most pest control operators are employed by privately owned and operated pest control firms. Some operators are employed by municipal government departments responsible for maintaining recreational facilities and other municipal buildings.

Experienced pest control operators may move into supervisory, management or trainer positions. Self-employment is also an option but this is a highly competitive field.

Pest control operators are part of the larger National Occupational Classification 7444: Pest Controllers and Fumigators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Support Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 100 Albertans are employed in the Pest Controllers and Fumigators occupational group which is expected to grow 0.6 to 1.6 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for pest control operators vary depending on location and the operator's qualifications. Those employed in the private sector may be paid commissions for the new business they attract.

© Government of Alberta, Human Resources and Employment

Pet Groomer

Produced JULY 2003

Pet groomers shampoo, clip and groom dogs, cats and other pets to improve and maintain their hygiene, comfort and appearance.

NOC Number(s): 6483
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O D**

Duties

Duties vary from one position to another but, in general, pet groomers:

- answer inquiries from the public
- schedule appointments and record owner information
- record each pet's name, sex, breed and disposition, and any information about health problems
- discuss grooming requirements and desired styles with pet owners
- bath, cut, comb, style and blow-dry pets' coats
- maintain their equipment
- clip claws
- clean pets' ears
- suppress anal glands.

Pet groomers sometimes use special shampoos to destroy insect pests. They may also advise customers regarding pet grooming.

Working Conditions

Pet groomers generally work indoors. Their work may involve:

- getting dirty or wet
- being exposed to unpleasant odours
- restraining animals as well as lifting and carrying animals and cages weighing up to 25 kilograms
- being exposed to insect pests such as fleas and ticks
- being bitten or scratched.

Some evening or weekend work may be required to cater to the needs of pet owners who cannot bring their pets in for grooming on weekdays. Self-employed pet groomers often work long hours.

Personal Characteristics

Pet groomers need the following characteristics:

- physically fit and in good health
- not allergic to or afraid of dogs or cats
- interested in animals, able to work with them and willing to clean up after them
- artistic with grooming styles
- able to maintain control but at the same time be gentle, quiet and patient with animals
- able to deal with pet owners tactfully and gain their trust.

They should enjoy having clear rules and guidelines for their work and caring for animals.

Educational Requirements

There are no minimum education requirements for pet groomers. Training is mainly on the job. Some salons provide more formalized training. Since an understanding of dog and cat behaviour is very important for pet groomers, many employers prefer to hire applicants who have previous animal care experience.

In Alberta, two private vocational schools offer formal dog grooming education programs.

- **AB Dog Grooming School** in Leduc offers a 15-week Professional Pet Styling program. Applicants must have a high school diploma or equivalent.
- **My Pets Beauty Salon** in Calgary offers a 16-week Professional Dog and Cat Grooming program. Applicants must have a high school diploma or equvivalent.

For information about mature student admission policies, please contact the schools.

Prospective pet groomers are strongly advised to discuss training options with practicing pet groomers before choosing a training program.

Employment and Advancement

(section revised JANUARY 2006)

Pet groomers work in grooming salons, veterinary clinics and kennels. Some are self-employed and work from their own homes.

One way to get started in this field is to obtain part-time or full-time work during busy times such as in the spring and summer or holidays when many employers require additional staff.

Advancement opportunities are limited. With experience and small business management skills, pet groomers may become managers or start their own businesses.

Pet groomers are part of the larger National Occupational Classification 6483: Pet Groomers and Animal Care Workers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Professional and Technical Services**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,100 Albertans are employed in the Pet Groomers and Animal Care Workers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since pet groomers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for pet groomers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Pet groomers' earnings vary considerably. Experienced groomers may work on commission so their incomes depend on their reputation for good work and their business and customer service skills.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Pet Groomers and Animal Care Workers group working part-time or full-time earned from **$10,100 to $36,700 a year.** The average salary was **$15,300 a year.**

Petroleum Engineer

Produced JUNE 2004

Petroleum engineers are involved in the exploration and development of oil and gas fields. They apply the principles of geology, physics, chemistry and the engineering sciences to the recovery, development and processing of petroleum.

NOC Number(s): 2145
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I O D**

Duties

Petroleum engineers work closely with teams of geoscience professionals (for example, geologists and geophysicists) and oil field operating personnel. In general, petroleum engineers:

- analyze drilling data to determine if wells contain significant quantities of hydrocarbons that can be recovered economically
- make decisions regarding appropriate well completion techniques
- assess costs and evaluate the economic viability of potential drilling locations
- monitor and analyze reservoir performance
- find ways to improve production and optimize drilling, completion and recovery methods
- design and implement appropriate production, processing and transportation options
- estimate the immediate and long-term production capabilities of oil and gas wells and their ultimate recoverable volumes of oil and gas
- design and implement health, safety and environmental controls on oil and gas operations.

Junior engineers sometimes work in remote field locations overseeing the collection and analysis of oil and gas well data or supervising the installation or operation of facilities. They may use computers to analyze data and samples at the site and co-ordinate drilling activities and safety procedures.

Working Conditions

In remote locations, petroleum engineers often work on site for a week to 10 days, then have a week off. Engineers working in oil fields and on offshore drilling rigs often work 12 hour shifts. Lifting up to 10 kiliograms may be required.

Experienced petroleum engineers usually work in an office environment. They may specialize in specific areas of petroleum engineering such as drilling, reservoir management, completions, production, operations, petrophysics, gas processing, secondary and tertiary recovery methods or pipelines.

Personal Characteristics

Petroleum engineers need the following characteristics:

- an aptitude for mathematics and science (especially chemistry and physics)
- the ability to think logically and solve problems
- good communication skills including written and oral presentation skills
- the ability to work independently or with a team of scientists
- high energy levels to deal with their demanding workloads and changing priorities.

They should enjoy being innovative, doing work that requires precision and supervising others.

Educational Requirements

The minimum education requirement for petroleum engineers is a **bachelor's degree in petroleum engineering or a related discipline** (for example, a degree in mechanical engineering with a minor in petroleum engineering). After graduation, petroleum engineers must be prepared to continue their education on an ongoing basis to keep up with new developments.

In Alberta, the **University of Alberta** in Edmonton and the **University of Calgary** offer four year programs leading to Bachelor of Science (B.Sc.) degrees in engineering. The admission requirement is a high school diploma with an overall average of at least 70 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

In addition to four year programs in engineering, the University of Alberta offers a co-operative program and the University of Calgary offers an internship program that include work experience components. Students in co-operative and internship programs usually take five years to complete degree requirements.

For those who already hold approved degrees or are registered as professional engineers, the University of Calgary offers a one year graduate diploma program in Chemical and Petroleum Engineering.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study to university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Most petroleum engineers work on site in locations where oil and gas are found. In Canada, the majority of petroleum engineers work in Alberta but there are also employment opportunities in British Columbia, Saskatchewan, Manitoba, Newfoundland and Nova Scotia. In recent years, many petroleum engineers have found employment overseas in oil producing countries around the world.

Employment opportunities are available locally with:

- major oil companies
- smaller, independent oil exploration, production and service companies
- engineering consulting firms
- government agencies.

Many petroleum engineers have their own consulting businesses or work in banks and other financial institutions which lend money to companies for the purchase of oil and gas properties.

Newly graduated petroleum engineers often start out doing field work under the supervision of an experienced engineer. There they can gain the kind of practical training that is required for more responsible field engineering or reservoir engineering assignments.

In the operations division, petroleum engineers can work their way up from field to district, division and operations management positions.

In Alberta, most people employed as petroleum engineers work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- fluctuations in supply and demand for oil and the price of oil
- other trends and **events** affecting employment (especially in the industries listed above)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,850 Albertans are employed in the Petroleum Engineers occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Petroleum Engineers occupational group working part-time or full-time earned from **$31,200 to $215,400 a year.** The average salary was **$97,400 a year.**

Petroleum Engineering Technologist

Produced OCTOBER 2004

Petroleum engineering technologists are responsible for many of the technical activities involved in the production of oil and gas from conventional reserves, as well as from heavy oil and oil sands. Their knowledge and training is applied to petroleum drilling, geology, production procedures, formation evaluation and reservoir engineering.

NOC Number(s): 2212.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I d**

Duties

In general, petroleum engineering technologists are involved in:

- geology - constructing subsurface maps and cross-sections from well log data, and supervising geological aspects of wellsite operations
- well operations - preparing drilling and workover programs, measuring well log information and obtaining core data, supervising field servicing operations
- reservoir studies - calculating hydrocarbon reserves, analyzing waterflood performance and other secondary recovery operations, and evaluating economic viability
- production operations - designing equipment requirements for producing wells and batteries (field stations), planning and conducting fracturing and other stimulation operations, and supervising field production operations
- regulatory compliance - monitoring compliance with legislated and regulatory requirements
- occupational health and safety or environmental programs - implementing and monitoring safety and environmental programs

Technologists may perform a variety of tasks including:

- directing the work required in assembling the mechanical and electrical testing instruments used at the wellsite
- measuring and recording pressures, temperatures and flow rates at production facilities
- designing and supervising mud systems or well completions
- specifying surface equipment (separators, treaters and storage vessels for gas gathering facilities) or supervising their installation
- specifying artificial lift systems for different well conditions
- calculating well deliverability, hydrocarbon reserves (through volumetric, material balance and decline curve analysis) and the economic viability of various projects and procedures
- performing reservoir surveillance
- preparing and implementing drilling/workover programs
- evaluating land sales or lease expiries
- evaluating electric and porosity logs for potential hydrocarbon zones
- determining zones on a well for testing and coring operations
- analyzing production well tests
- optimizing well, gathering system and production facility performance
- making recommendations regarding processing techniques and implementing or monitoring chemical and corrosion inhibition programs
- conducting environmental impact assessments and managing remediation
- supervising processing facilities
- specifying pipeline or flowline systems, or supervising their installation
- submitting progress reports and managing budgets.

Working Conditions

Petroleum engineering technologists work at the wellsite, in field offices and in head offices. At the wellsite, they work shifts and may work outdoors in all weather conditions. In offices, they use computers for data compilation and analysis, project management and communications.

Personal Characteristics

Petroleum engineering technologists need:

- an aptitude for math, chemistry and physics
- good verbal and written communications skills
- good organizational skills
- an interest in and aptitude for working with computers
- the ability to work alone and with a team.

They should enjoy working with tools and instruments at tasks that require precision, analyzing data and finding innovative solutions to problems and taking charge of situations.

Educational Requirements

(section revised MAY 2005)

The minimum educational qualification required to work as a petroleum engineering technologist is a **two year diploma of technology related to petroleum engineering.**

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Petroleum Engineering Technology diploma program. The admission requirement is a high school diploma with English 30 or 33, Pure Math 30 (or Math 30 or at least 60 per cent in Math 33) and one of: Science 30, Physics 30 or Chemistry 30.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Petroleum Engineering Technology diploma program. The admission requirement is a high school diploma or equivalent with English 30, Pure Math 30 (or Math 30), Chemistry 30, and Science 30 or Physics 20.

SAIT also offers a Bachelor of Applied Technology Petroleum Engineering degree program that includes a 32 week work experience component. This program may be taken full-time or evenings. The entrance requirement is a two year engineering technology diploma (chemical, petroleum, electrical, mechanical, civil, power or industrial instrumentation) with a grade point average (GPA) of at least 2.5/4 or a degree in science or engineering from a recognized university.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Petroleum engineering technologists may work in a variety of jobs related to oil and gas production and reservoir analysis. They are employed by:

- exploration, geological and geophysical companies
- oil, gas and resource companies
- engineering consulting firms
- petroleum service companies
- government departments and regulatory bodies.

Most major employers are located in western Canada but jobs are available worldwide.

Opportunities for advancement include team leadership, supervisory and management positions.

Petroleum engineering technologists are part of the larger National Occupational Classification 2212: Geological and Mineral Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 3,600 Albertans are employed in the Geological and Mineral Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since petroleum engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for petroleum engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for petroleum engineering technologists vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Geological and Mineral Technologists and Technicians occupational group working part-time or full-time earned from **$21,300 to $117,000 a year.** The average salary was **$56,700 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Pharmacist

Produced MARCH 2005

Pharmacists provide services and programs that are designed to promote health and well-being, and treat disease and other disorders through drug therapy, wellness promotion and disease state management.

NOC Number(s): 3131.1
Minimum Education: 5 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I D**

Duties

Pharmacists may work in:

- community pharmacies
- hospitals and related health institutions
- health research
- industrial settings
- post-secondary institutions
- health regulatory, advocacy and other professional organizations
- pharmacy administration.

In general, pharmacists working in community and hospital settings:

- determine, monitor and manage drug therapy, both independently and in collaboration with other health care professionals
- promote and maintain health and wellness, and provide disease state management
- counsel patients regarding the safe and appropriate use of drugs, and the importance of complying with drug therapy instructions
- assist patients, caregivers and other health care providers by providing advice regarding the selection and use of drug and non-drug products
- compound, prepare and dispense drugs
- provide non-prescription drugs, drugs for injection (including parenteral products), health care aides and devices
- supervise and manage drug distribution systems to maintain public safety and drug system security
- conduct or collaborate in drug-related research
- conduct or administer drug and other health-related programs such as structured medication reviews
- provide advice regarding disease management through home visits, medication and disease information, natural medicine consultations, disease prevention, management clinics and consultation (regarding asthma, diabetes, screening for osteoporosis, smoking cessation, heart health, depression, pain management, etc.), weight loss and nutrition consultation, anticoagulant management clinics, travel medicine clinics
- educate clients, patients, caregivers and other health professionals about related matters.

In addition, pharmacists in community settings:

- sell prescription and non-prescription drugs, surgical supplies, home health care aides, herbal products, vitamins and nutraceuticals, and other related products
- participate in health promotion, prevention and public health activities
- may also be involved in drug distribution logistics, accounting, marketing and human resource functions.

Pharmacists in hospital settings may specialize in fields such as oncology, cardiology, psychiatry, infectious disease, critical care, pediatrics and geriatrics.

Pharmacists in industrial and educational settings may:

- conduct pharmacy practice research and develop drug products
- work in the production, marketing, quality control or sales departments of pharmaceutical firms
- teach at the post-secondary level

- publish information to educate other pharmacists, physicians and patients
- be involved in advocacy, association management and government relations.

Working Conditions

Pharmacists may work alone, or with other pharmacists, physicians, nurses, pharmacy technicians or pharmacy assistants. Those working in community and hospital settings often work rotating shifts that include evenings and holidays.

In some settings, pharmacists may be required to stand for significant periods of time.

Personal Characteristics

Pharmacists need the following characteristics:

- a genuine interest in providing clinical care for people from all walks of life
- good communication skills
- tact and good judgement
- precise work habits and the ability to work under pressure
- a high degree of integrity
- the desire to keep up to date with new ideas and advances in the pharmaceutical sciences
- the ability to work independently, make decisions and solve problems.

They should enjoy tasks requiring precision and organized methods, synthesizing information and solving problems, and directing and instructing pharmacy staff.

Educational Requirements

The academic requirement is **a degree in pharmacy**.

In Alberta, the **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree in pharmacy. The entrance requirements are:

- a letter stating the applicant's reasons for wanting to enter pharmacy
- a preprofessional year of study that includes at least six units of course weight in general chemistry, organic chemistry and English, and three units in biology, biochemistry, statistics and calculus.

The required preprofessional year is not included in the four year B.Sc degree program in pharmacy so a total of five years of university education is required.

Admissions to the pharmacy program are limited and priority is given to students who have a high academic standing. Prospective students should carefully review **University of Alberta** course requirements for admission to the pharmacy program.

University transfer programs are offered by post-secondary institutions throughout Alberta. Admission requirements vary but generally include a high school diploma with a minimum average (ranging from 60 to 70 per cent depending on the program) in English Language Arts 30-1 (or English 30) and four other 30-level subjects (Pure Math 30 or equivalent, Chemistry 30 and Biology 30 may be required to gain admission to the preprofessional year courses listed above). Students are strongly advised to check the **Alberta Transfer Guide** to ensure that the courses they choose to take will be accepted by the University of Alberta.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised SEPTEMBER 2005)

Under Alberta's Pharmaceutical Profession Act, only registered members of the Alberta College of Pharmacists (ACP) may call themselves or practice as Pharmacists. The preparation, distribution and control of drugs in a pharmacy, the compounding, dispensing and retail sale of drugs, and the provision of information concerning the use of a drug when it is dispensed or sold, must be performed or supervised by a pharmacist.

Employment and Advancement

(section revised JANUARY 2006)

Pharmacists are employed by:

- pharmacies and retail stores with pharmacy departments
- health care facilities
- pharmaceutical companies
- government (regulatory departments, public heath units, food and drug inspection services, law enforcement laboratories, the Armed Forces)
- professional, advocacy and regulatory bodies
- college and universities (in teaching and research positions).

Pharmacists in community settings usually start as salaried employees but, with experience, may eventually become managers, partners or owners of pharmacies.

In Alberta, over 75 per cent of people employed as pharmacists work in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,500 Albertans are employed in the Pharmacists occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

There is a growing shortage of pharmacists in Alberta and across North America as a whole.

Salary

(section revised OCTOBER 2005)

According to the **2004** Pharmacists Association of Alberta Wage and Benefit Survey, pharmacists worked an average of 35 to 40 hours a week and their average wage ranged from $38 to $39 dollars an hour **($69,100 to $81,100 a year)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Pharmacists occupational group working part-time or full-time earned from **$33,900 to $96,300 a year.** The average salary was **$69,300 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Pharmacologist

Produced FEBRUARY 2005

Pharmacologists are biomedical scientists who investigate the mechanisms underlying the effects of drugs and chemicals on living systems. They use this knowledge to help design and evaluate drugs for the prevention and treatment of disease.

NOC Number(s): 2121.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Duties and responsibilities vary from one position to another but, in general, pharmacologists:

- conduct basic, clinical or translational research in laboratories in universities, hospitals or the pharmaceutical and biotechnology industries
- participate in training physicians, pharmacists, dentists and other health care professionals in universities or other post-secondary institutions
- assist in the evaluation and marketing of drugs and related products for the pharmaceutical industry
- work in government agencies concerned with the detection, regulation and licensing of drugs and related products.

Their work is multi-disciplinary, combining principles from biomedical and other sciences including physiology, biochemistry, molecular and cell biology, pathology, microbiology, chemistry, nutrition and psychiatry. They develop drugs for the treatment of a wide variety of conditions (e.g. bacterial infections or psychiatric, neurological or cardiovascular diseases).

Pharmacologists may specialize in one or more of the following areas:

- **pharmacodynamics** - the study of the mechanisms of drug action. This may involve conducting experiments to investigate drug actions on biological processes (e.g. gene regulation, structure and function of proteins, cell biology, tissue and organ responses to physiological and pathological stimuli) in intact organisms (including humans).
- **pharmacokinetics and drug metabolism** - the study of the time-dependent processes of absorption, distribution, biotransformation and elimination of drugs in animals and humans so appropriate dosage regimens for drugs can be developed to maximize therpuetic benefit and minimize unwanted effects.
- **toxicology** - the study of poisons, including their mechanisms of action, as well as the detection and treatment of the adverse effects of drugs (for related information, see the Toxicologist occupational profile).

Basic pharmacologists generally study drug and chemical responses in biological systems using experimental animals.

Clinical pharmacologists are usually physicians (for more information, see the Physician occupational profile) who specialize in the study of pharmacodynamic and pharmacokinetic properties of drugs in humans.

Translational pharmacologists are those who facilitate the clinical application of new discoveries in basic pharmacological research.

Working Conditions

Pharmacologists usually work in research laboratories. Overtime is often required to complete projects on time.

Pharmacologists may be required to travel to scientific workshops and conferences to share their research findings with other scientists or health care professionals.

Personal Characteristics

Pharmacologists need the following characteristics:

- a sound background and aptitude for biological and medical sciences
- an inquiring mind combined with excellent critical thinking abilities
- good communication skills
- perseverance and patience.

They should enjoy synthesizing information to solve problems and develop innovative solutions. This may involve working in teams with other basic and clinical scientists, applying a range of analytical techniques and using sophisticated instrumentation.

Educational Requirements

(section revised APRIL 2005)

A **four year Bachelor of Science (B.Sc.) degree** in pharmacology or a related biomedical science (e.g. biochemistry, physiology) is required to work in a technical job or to become a representative for a pharmaceutical company (for more information, see the Technical Sales Representative profile). Pharmacologists who have Master of Science (M.Sc.) degrees may work as technologists or research associates. A Doctoral (PhD) degree is generally required to work as an independent investigator in universities or industry. After obtaining a Doctoral degree, pharmacologists generally continue training for up to six or more years as post-doctoral fellows before accepting academic research and teaching positions in universities.

Because pharmacology involves the use of principles from many of the biomedical sciences, there is more than one possible education route. Pharmacologists may train initially in medicine, pharmacy, molecular biology, biochemistry or physiology before specializing in pharmacology.

The **University of Alberta** in Edmonton offers a B.Sc. degree program as well as post graduate programs leading to the M.Sc. and PhD degrees in Pharmacology. The entrance requirement for the Bachelor's degree program is an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and Physics 30. Higher marks are generally required to gain admission to this quota program.

The **University of Calgary** offers a four year Bachelor of Health Sciences Honours degree program in Biomedical Sciences. The entrance requirements include English 30, Pure Math 30 (with a minimum grade of 70 per cent), Biology 30, Chemistry 30 and one of the following: Math 31, Physics 30, Social Studies 30, Science 30, a language 30 other than English or one 5-credit Grade 12 subject. Enrollment is limited.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Pharmacologists are employed by:

- provi ..al and federal governments
- universities
- research institutes
- pharmaceutical and biotechnology companies
- health authorities
- food processing companies
- agricultural chemical companies.

Pharmacologists work closely with other science and health professionals to ensure that new products are as safe and effective as possible. Often pharmacologists work in an advisory role in activities related to the development, formulation, production and marketing of new drugs for clinical use.

Pharmacologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**

- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since pharmacologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for pharmacologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Suitably qualified integrative pharmacologists at the M.Sc. level are in high demand in the pharmaceutical industry.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists and Related Scientists occupational group working part-time or full-time earned from **$17,000 to $99,400 a year.** The average salary was **$64,600 a year.**

Pharmacologists who have M.Sc. degrees earn from **$35,000 to $45,000 per year.** Those who have PhDs earn from **$40,000 to $60,000 per year** as post-doctoral fellows. Experienced research pharmacologists earn over **$100,000 per year (2005 estimates).**

© Government of Alberta, Human Resources and Employment

Pharmacy Assistant/Technician

Produced JANUARY 2005

Pharmacy assistants and technicians assist pharmacists by compounding, packaging and labelling pharmaceutical products, and maintaining prescription records and inventories of medications and pharmaceutical products.

NOC Number(s): 3414.4
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I O**

Duties

Pharmacy assistants and technicians work under the supervision of one or more pharmacists. Their duties and responsibilities vary, depending on their level of training and where they work (in a hospital or a retail pharmacy). In general, they:

- maintain proper storage and security conditions for drugs
- enter patient information and doctors' prescriptions in computer systems
- maintain prescription and inventory record keeping systems
- maintain inventories
- place orders for stock.

Additional responsibilities depend on the setting. For example, in retail outlets, pharmacy assistants and technicians may:

- answer telephones
- help customers find non-prescription items
- answer customer questions about non-drug products
- accept payments for prescriptions
- price stock and mark items for sale
- prepare and reconcile third party insurance claims and records.

In hospital settings, they may:

- restock drugs and solutions kept on nursing wards
- restock drug kits that are kept for specific types of emergencies (e.g. anapylactic shock, diabetic shock)
- fill dose carts and deliver them to nursing stations
- collect and chart information.

Technicians generally have more training than assistants and therefore have additional responsibilities such as:

- preparing, packaging and labelling prescription medications
- preparing sterile products such as intravenous (IV) admixtures, chemotherapy admixtures and total parenteral nutrition (TPN)
- preparing specialized compounds
- checking dispensed, compounded and sterile products
- supervising other staff.

Working Conditions

Pharmacy assistants and technicians may be required to work shifts including evenings, weekends and holidays, sometimes under stressful conditions. The work is demanding and requires accuracy; there is no room for error.

Pharmacy assistants and technicians are on their feet for most of their shift and may be required to lift and move objects weighing up to 10 kilograms.

Personal Characteristics

Pharmacy assistants and technicians must be able to perform routine tasks while maintaining a high degree of concentration and attention. They also need the following characteristics:

- excellent oral and written communication skills
- a caring attitude towards others
- good manual dexterity
- the ability to remain calm and handle emergencies
- the ability to pay close attention to detail
- a willingness to keep up to date with new products and changes in old products.

They should enjoy having clear rules and organized methods, compiling information and using computers.

Educational Requirements

(section revised DECEMBER 2005)

Employers usually prefer to hire applicants who are graduates of a related training program or who have pharmacy experience. Computer literacy and keyboarding skills are essential.

- **Academy of Learning** in Calgary, Edmonton, High River and Red Deer offers a 43 week Retail Pharmacy Technician program. The entrance requirement is a high school diploma with Grade 12 English and a Grade 10 math, or equivalent. The Academy of Learning in Edmonton also offers a 51-week Pharmacy Technician program. The entrance requirement is a high school diploma or equivalent.
- **Bow Valley College** in Calgary offers a two year Pharmacy Technician diploma program. The entrance requirement is a high school diploma with an average or 60 per cent with no grade lower than 60 per cent in English 30-1 or 30-2 (English 30 or 33), Applied Math 30 or Pure Math 30 (Math 30 or 33), Biology 30 and Chemistry 30 or equivalent.
- **CDI College of Business, Technology and Health Care** in Edmonton offers a 46-week Pharmacy Technician certificate program. The entrance requirement is a high school diploma or equivalent.
- **CDI College of Business, Technology and Health Care** in Calgary and Edmonton offers a 34-week Pharmacy Technician-Retail certificate program. The entrance requirement is a high school diploma or equivalent.
- **Grande Prairie Regional College** offers a 20-week Pharmacy Assistant Retail certificate program. The entrance requirement is a high school diploma with a combined average of at least 60 per cent in Grade 12 Math and English, and Computers or Information Processing 20 or equivalent.
- **Lakeland College** in Sherwood Park offers an 18-week Pharmacy Technician Certificate of Training. The entrance requirement is a high school diploma with a combined average of at least 60 per cent in English Language Arts 30-1, English Language Arts 30-2, English 30 or 33 and Pure Math 20, Applied Math 20, Math 20 or 23.
- **NorQuest College** in Edmonton offers a two year Pharmacy Technician diploma program. The entrance requirement is a high school diploma with an overall average of at least 60 per cent and no grade below 60 per cent in the following courses: English 30-1 or 30-2 or equivalent, Pure or Applied Math 30 or equivalent, and Biology 30. Applicants should have a keyboarding speed of at least 20 words per minute and up-to-date immunizations.
- **Red Deer College** offers a 14 course Pharmacy Technician certificate program that includes a practicum (one month in a community pharmacy and one in a hospital pharmacy). The program may be taken full time (10 months), part-time (two years) or by distance education (two years plus practicum). The entrance requirement is a high school diploma or equivalent with English 30 or 33; Biology 30, Science 30 or Chemistry 30; Math 30 or 33 (or Pure or Applied Math 30) and evidence of computer literacy (Info Processing 1010, 1020, 2050, 2080) or successful completion of a test. Applicants also must be in good health and bondable.
- **Reeves College** in Edmonton offers a 30-week Retail Pharmacy Technician certificate program. The entrance requirement is a high school diploma with a Grade 12 English and a Grade 12 Math or equivalent.
- **Robertson College** in Calgary offers a 40 week Pharmacy Technician program. The entrance requirement is a high school diploma with Grade 12 English or equivalent.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a five month (includes practicum) Pharmacy Technician (Retail) certificate program. The entrance requirement is a high school diploma or equivalent with an overall average of at least 60 per cent in Pure or Applied Math 30 or Math 33, English 30 or 33, and Computers or Information Processing 20 or equivalent.
- **Sprott-Shaw Community College** in Calgary and Edmonton offers a 33 week Retail Pharmacy Technician program. The entrance requirement is a high school diploma or equivalent.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most pharmacy assistants and technicians are employed in:

- retail pharmacies
- hospital and medical centre pharmacies.

Pharmacy technicians also may be employed by:

- health insurance companies and third party billing centres (e.g. Alberta Blue Cross)
- related organizations such as pharmaceutical companies, drug wholesalers and pharmacy supply companies.

Depending on the size and nature of the organization, experienced pharmacy technicians may advance to supervisory positions. In some organizations, pharmacy assistants may advance to pharmacy technician positions through in-house training.

Pharmacy assistants and technicians are part of the larger National Occupational Classification 3414: Other Assisting Occupations in Support of Health Services. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,100 Albertans are employed in the Other Assisting Occupations in Support of Health Services occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since pharmacy assistants and technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for pharmacy assistants and technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Assisting Occupations in Support of Health Services occupational group working part-time or full-time earned from **$11,900 to $58,200 a year.** The average salary was **$23,700 a year.**

© Government of Alberta, Human Resources and Employment

Photographer

Produced JUNE 2005

Photographers use their skills and artistic talent to capture people, products, events, fashion, landscapes, legal evidence and other subjects on film or digital media.

NOC Number(s): 5221
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M O**

Duties

Photographers may specialize in fields such as commercial, fashion, portrait, event, forensic, aerial, scientific or multimedia photography, or photojournalism. In general, however, they:

- consult with clients or advertising staff and study assignments to determine locations and type of equipment needed
- select appropriate media (film or digital), equipment (e.g. lenses, electronic flashes, floodlights, reflectors) and props
- set up equipment and adjust cameras for desired focus, exposure, composition and other settings
- take numerous photographs and choose from the best
- test and maintain all equipment
- use specialized printers, film and paper processing or digital media as appropriate
- use computers with appropriate software to process and manipulate digital images
- may use various techniques to re-touch negatives and prints.

Commercial photographers (advertising, architectural, corporate, fashion, industrial and product photographers) take pictures for advertising, public relations, manual illustration, brochures, sales catalogues, flyers or other commercial purposes. The subjects they photograph include merchandise, industrial products, clothing, food, equipment, buildings and people. They may specialize in large products, small tabletop work or fashion photography. They must be very versatile, able to shoot almost anything and produce dramatic, quality work quickly. They often work closely with art directors and use computers to digitally manipulate images.

Portrait and wedding photographers take pictures of individuals, groups of people and pets, often at significant moments in subjects' lives. In small photography studios or department stores, photographers may have a variety of responsibilities in addition to taking pictures including:

- arranging appointments and viewings
- selling photograhic equipment and supplies, images and related products such as picture frames and albums
- bookkeeping and general office duties
- framing and laminating photographs
- processing, enhancing and retouching film and digital images.

The ability to help people relax in front of the camera is an essential skill for portrait and wedding photographers.

Event photographers attend events such as sports tournaments and large family reunions, take digital photographs and sell images to people attending the event. They may sell print copies of images or CDs of images.

Forensic photographers use computers, cameras and related equipment to:

- record legal evidence at the scene of a crime, in hospitals or in a forensic laboratory
- develop visual aids and charts for lectures and the presentation of evidence
- provide a permanent record of evidence for use in court
- provide support for the rest of the scientific activities in a forensic lab.

Forensic photographers may employ a variety of specialized materials and techniques including infrared and ultraviolet films, macro-photography, photomicrography, photogrammetry and sensitometry.

Forensic photoanalysts are scientists who use photographic or photoanalytical techniques to examine physical marks and relate materials to each other (e.g. microscopic random marks on an object may reveal that two items originate from a common source). For more information, see the Forensic Laboratory Analyst occupational profile.

Aerial photographers shoot pictures from aircraft for news, scientific research, town planning, rural development, cartographic, economic or military purposes. They may photograph:

- subdivisions of homes for realtors
- industrial sites for corporate brochures
- altitude and area mapping for surveys
- horse and cattle operations for advertising purposes.

They use various types of equipment to produce black and white, colour, infra-red and three-dimensional images.

Scientific and biomedical photographers specialize in scientific fields such as medicine. For example, they may:

- provide illustration and documentation for scientific publications and research reports
- specialize in patient, operating room or laboratory photography
- produce images of treatment procedures for medical textbooks.

Medical photographers must have a good understanding of human anatomy. They may work closely with medical illustrators and graphic design specialists to prepare presentations for medical lectures or textbooks.

This is a highly technical field, using specialized techniques such as ultraviolet and infrared photography, fluorescence, x-rays, time-lapse photography, photomicrography and photogrammetry to obtain information. Photographers in this field often use very delicate instruments such as optical microscopes attached to a camera. Some medical photographers are highly trained specialists (e.g. retinal photographers).

Multimedia photographers produce and manipulate silver-based and digital images to:

- illustrate web-pages or sites and support e-commerce
- enhance multimedia presentations
- store, retrieve and transfer electronic image files.

They may use a wide variety of devices including digital cameras, film recorders, dye-sublimation printers and flatbed, film and drum scanners.

Photojournalists (press photographers) take pictures for newspapers and magazines to tell news stories about events, people, places and objects. They must be able to recognize a scene or event as important or unusual, make decisions instantly and carry a camera, sometimes in dangerous circumstances. Since they usually use digital photography and transmit pictures electronically, they must stay abreast of changing technology.

Writing may be part of a photojournalist's assignment. Magazines and newspapers sometimes buy a "picture story" which includes both pictures and a written narrative.

Working Conditions

Photographers may be routinely required to lift equipment weighing up to 10 kilograms. Photojournalists may carry lenses, a laptop computer and extra camera equipment that weigh up to 20 kilograms. The pressure of having to meet deadlines can be stressful.

Other working conditions, especially working environments and hours, vary considerably in this occupation. For example, commercial photographers and portrait photographers may work in well-lighted studios, scenic outdoor locations, clients' homes, churches or corporate offices. Those employed full-time may work regular hours, five days a week. Freelance photographers often are required to work evenings and weekends.

Photojournalists often work long, irregular hours and may be expected to be at a certain location at a moment's notice. The scenes to be photographed are sometimes very unpleasant. Some photojournalists travel to various news "hot spots" around the world. Living conditions may be less than ideal.

Personal Characteristics

Photographers need the following characteristics:

- good listening skills
- good eyesight and colour vision
- artistic ability
- manual dexterity
- a good sense of timing

- patience and the ability to put people at ease
- the ability to work accurately with details
- an interest in learning new procedures.

They should enjoy composing and arranging innovative pictures, and working with equipment.

Educational Requirements

Photographers may learn by working in related fields or by taking related post-secondary education programs. Computer skills are essential for digital photography and increasingly required in other forms of photography.

The field of professional photography is quite competitive. Versatility is an important and often critical element in obtaining work as a professional photographer.

Post-secondary institutions throughout Alberta offer fine art, visual arts, design, communications and journalism programs. The following institutions offer programs specifically related to the technical, artistic or design aspects of photography.

- The **Alberta College of Art and Design** in Calgary offers a four year Bachelor of Design degree program in photography. The program includes a foundation year in the Visual Arts program. The entrance requirement for the Visual Arts program is a high school diploma with an average of at least 60 per cent in four Grade 12 subjects including English 30 or English Language Arts 30-1 (or 65 per cent in English 33 or ELA 30-2).
- **Grant MacEwan College** in Edmonton offers a two year Design Studies diploma program with a major in design and photography. Applicants must have successfully completed the College's one year Design Foundation's Certificate program. The entrance requirement for the certificate program is a high school diploma with English 30 (or at least 75 per cent in English 33 or successful completion of an exam).
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year diploma program in Photographic Technology. The minimum entrance requirement is a high school diploma with an average of at least 68 per cent in English 30 or 33, and Pure or Applied Math 30 (or Math 30 or 33). Media-related courses may be considered; high school courses related to art and design, physics, chemistry, communications, psychology and computers are recommended. Admission to this quota program is competitive.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Journalism diploma program with a photojournalism major. The minimum entrance requirement is a high school diploma with English Language Arts 30-2, ELA 30-2, English 30 or English 33. Students in the photojournalism major are generally selected from first year Journalism students.
- The **University of Alberta** in Edmonton offers four year Bachelor of Design degree program in visual communications. The entrance requirement is a high school diploma with an average of 65 to 80 per cent in English Language Arts 30-1 (or English 30) and any four of the following: Social Studies 30, a 30 level language other than English, Biology 30, Chemistry 30, Physics 30, Math 30 or Pure Math 30 or Math 31, Science 30, one approved fine arts subject.
- The **University of Calgary** offers a four year Bachelor of Fine Art (BFA) degree program with a specialization in photography. The entrance requirement is a high school diploma or equivalent with an average of at least 60 per cent in English 30 and four of the following: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, Art 30, one five credit Grade 12 subject. The Faculty of Continuing Education offers a 250 hour Visual Design certificate program with a photographic arts specialization.
- The **University of Lethbridge** offers four year and post-diploma BFA degree programs with a specialization in Photo-Arts. The entrance requirement is a high school diploma with an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three other 30 level subjects and a fifth Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Photography is a very competitive field. Most photographers work as independent freelancers who specialize in one or more types of work. Some full-time employment is available in areas such as forensic, medical, aerial or scientific photography but these are very specialized jobs and limited in number. Department stores and retail chains offer some full-time positions in portrait photography.

In Alberta, most people employed as photographers work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,450 Albertans are employed in the Photographers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Talent, perseverance, reputation and experience determine how much freelance photographers earn.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Photographers occupational group earned **up to $58,700 per year.** The average salary was **$50,000 per year**.

Photographic Processing Technician

Produced MAY 2005

Photographic processing technicians develop images and make prints and slides. They also may enlarge and retouch photographs or use computers to manipulate images.

NOC Number(s): 9474
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M I

Duties

Some photographic processing technicians are semi-skilled workers who operate machinery that automatically develops and prints film; others are skilled technicians who perform detailed tasks that cannot be automated.

In general, photographic processing technicians:

- process film and make prints
- mix chemicals
- maintain quality control.

Experienced technicians may work in the laboratories of professional photographers or supervise equipment operators in laboratories that process large volumes of photographs. In addition to the duties listed above, they:

- enlarge negatives or slides
- eliminate minor imperfections
- create special effects
- retouch photographs
- use computers to manipulate images
- output digital images to specialized peripheral equipment
- maintain quality control
- maintain equipment.

Those who work in photography studios also may set up lights and cameras and generally assist photographers.

Working Conditions

Photographic processing technicians usually work in clean, air-conditioned surroundings. They often sit for long periods of time performing tasks as quickly as possible while still maintaining quality standards.

In laboratories that provide fast service for amateur photographers, shift work may be required.

Technicians who spend long periods of time closely examining small images or at computer workstations may be subject to eyestrain.

Personal Characteristics

Photographic processing technicians need the following characteristics:

- good vision including colour perception
- manual dexterity
- mechanical ability
- no allergies to chemicals used in photographic processing
- the ability to concentrate on details and work quickly.

They should enjoy operating equipment and having clear guidelines and organized methods for their work.

Educational Requirements

Individuals who have no formal training in photography or photofinishing may be hired and **trained on the job** in a large processing (photofinishing) laboratory. Initially, they perform routine duties such as cutting prints. Experienced workers (often graduates of related post-secondary programs) generally perform more complex tasks such as printing, hand enlarging, retouching and the computer manipulation of images.

Most employers prefer to hire high school graduates who are computer literate. Experience processing film as a hobby is an asset.

Employment and Advancement

(section revised JANUARY 2006)

Photographic processing technicians may be employed full-time or part-time in:

- photofinishing laboratories that process film for amateur or professional photographers
- photographic supply and developing shops
- portrait and commercial studio laboratories
- the photo laboratories of newspapers, magazines, advertising agencies, health facilities, research laboratories and police services
- establishments that use digital imaging.

Inexperienced photographic processing technicians may start work operating automated equipment in labs such as those in many retail outlets. Experienced technicians employed in large volume laboratories can advance to supervisory positions, particularly if they have related post-secondary education or become sales or customer service representatives. Some photographic processing technicians open their own laboratories and some become professional photographers.

Photographic processing technicians are part of the larger National Occupational Classification 9474: Photographic and Film Processors. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,000 Albertans are employed in the Photographic and Film Processors occupational group which is expected to grow up to 0.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings vary according to the photographic processing technician's qualifications and the place of employment. **Starting wages** range from **minimum wage to $10 per hour (2005 estimate)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Photographic and Film Processors occupational group working part-time or full-time earned from **$14,600 to $39,100 a year.** The average salary was **$25,200 a year.**

Physical Therapy Assistant

Produced DECEMBER 2004

Physical therapy assistants assist physiotherapists in the implementation of treatment programs designed to improve or maintain clients' abilities to function independently.

NOC Number(s): 3414.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S o**

Duties

Physical therapy assistants' duties vary from one position to another. For example, they may work in out-patient clinics with clients who have orthopedic problems, in extended care settings with geriatric clients, or in hospital settings with patients who have a variety of disorders. Whatever the setting, they work under the direction and supervision of physiotherapists.

Physical therapy assistants may:

- accompany patients to treatment rooms, perform lifts and transfers, and help patients correctly position themselves
- prepare and apply hot or cold packs and wax treatments
- assist or participate in hydrotherapy activities
- perform/assist with exercise activities such as stretching, individual exercises, posture re-education and gait re-education
- assist with implementing electrotherapy treatments such as ultrasound, interferential treatment, transcutaneous electrical nerve stimulation and electrical muscle stimulation
- apply braces or artificial limbs and instruct clients in the use of crutches, canes, walkers and wheelchairs
- lead or participate in group exercise or activity classes
- monitor patients during treatments, individual activities and exercise classes, and report patient performance
- perform postural drainage, percussions and vibrations for treatment of respiratory conditions and teach deep breathing exercises.

Physical therapy assistants also may be involved in other activities:

- adjusting and monitoring the operation of equipment
- preparing treatment areas and electrotherapy equipment for use by physiotherapists
- checking and storing equipment
- cleaning physical therapy equipment and treatment areas
- changing and laundering linen
- performing clerical tasks such as documenting activities, keeping track of statistics, maintaining an inventory of equipment, ordering supplies and equipment, answering telephones and scheduling appointments.

Working Conditions

Physical therapy assistants work in a variety of settings including private practices, hospitals, long term care facilities, schools and private homes. They generally work weekdays but may be required to work some evenings and weekends.

The work is physically demanding. Physical therapy assistants help patients to stand and walk and may be on their feet for long periods of time. They may be required to move equipment weighing up to 25 kilograms.

Personal Characteristics

Physical therapy assistants need the following characteristics:

- flexibility and adaptability
- good interpersonal skills
- good oral and written commuication skills
- patience
- manual dexterity
- strength and stamina
- good observation and organizational skills
- the ability to deal with people who are under physical and emotional stress
- the ability to follow directions closely and work as part of a team
- the ability to maintain patient confidence and enthusiasm.

They should enjoy having clear guidelines and organized methods for their work, helping people and using therapeutic equipment.

Educational Requirements

(section revised APRIL 2005)

In the past, physical therapy assistants were often trained on the job. Now, an increasing number are graduates of post-secondary Therapist Assistant programs. Some have a related background in practical nursing or exercise therapy.

In Alberta, the following institutions offer training programs for physical therapy assistants:

- **Grant MacEwan College** in Edmonton offers a two year Therapist Assistant diploma program that prepares graduates for work as an occupational therapist assistant or physical therapist assistant (or both). Applicants must have a high school diploma or equivalent with an average of at least 65 per cent in English 30, Biology 30, Chemistry 30 or Science 30, and two other Grade 12 subjects.
- **Medicine Hat College** offers a two year Physical Therapy Assistant diploma program via classroom instruction or distance education. Applicants must have a high school diploma or equivalent with at least 60 per cent in English 30, Biology 30, and two other 30 or 33 level subjects, one of which must be a 30-level science or math. Students must have obtained a current Basic CPR Certficate (BCLS), a Standard First Aide Certificate and updated immunizations.
- **NorQuest College** in Edmonton offers a two year Physical Therapy Assistant diploma program. The entrance requirement is a high school diploma with at least 70 per cent in English 33 or 30-2 or eqivalent, 50 per cent in Math 10 and 60 per cent in Biology 30, or a GED with a B average. Applicants also require CPR, an immunization record and a clear criminal record check.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a 14 month Rehabilitation Therapy Assistant certificate program via an alternate delivery model. Students take a core curriculum for the first two semesters (September - April) and then branch into one of two areas: occupational therapist assistant or physical therapist assistant. Applicants must have a high school diploma or equivalent with an overall average of at least 60 per cent in English 30, Biology 30 and Chemistry 20. Applicants also must be able to demonstrate a level 8 in the Canadian Language Benchmarks Assessment (available through SAIT). Basic CPR, a standard first aid certificate and updated immunization are required prior to the first practicum placement.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Physical therapy assistants are employed in:

- hospitals
- rehabilitation centres
- nursing homes
- long term care
- community and government health agencies
- home care agencies
- physiotherapists' offices and clinics
- schools.

Without further education, advancement opportunities for physical therapy assistants are limited.

Physical therapy assistants are part of a larger National Occupational Classification 3414: Other Assisting Occupations in Support of Health Services. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,100 Albertans are employed in the Other Assisting Occupations in Support of Health Services occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since physical therapy assistants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for physical therapy assistants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Assisting Occupations in Support of Health Services occupational group working part-time or full-time earned from **$11,900 to $58,200 a year.** The average salary was **$23,700 a year.**

Wages in private practice settings tend to be lower than those in public service settings such as hospitals. For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Physician

Produced NOVEMBER 2004

Physicians are licensed to diagnose and treat patients' diseases, physiological and psychiatric disorders, injuries and other health-related problems.

NOC Number(s): 3112
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S D**

Duties

In general, physicians:

- take medical histories and examine patients
- order, perform and interpret medical tests to diagnose health-related problems
- determine appropriate treatments which may include advice, medication or more complex treatment or rehabilitation programs
- counsel patients on diet, hygiene and preventative health care
- co-ordinate their work with nurses, social workers, rehabilitation therapists, pharmacists, psychologists and other health care providers.

Specific duties and responsibilities vary depending on the type of position:

- family physician or other medical specialist
- public health officer
- occupational health officer
- research scientist
- teacher or professor
- administrator.

Physicians may specialize in areas such as anaestheology, cardiology, emergency medicine, family medicine, geriatrics, gynecology and obstetrics, intensive care, internal medicine, neurology, pediatrics, psychiatry, sport medicine or surgery.

Working Conditions

Physicians' working conditions depend on the type of position. Those in private practice work in hospitals, clinics, offices and community settings. In a typical day, most physicians see a succession of patients and may spend a considerable amount of time driving to hospitals, clinics or patients' homes. The work can be both emotionally demanding and rewarding.

Physicians often work very long hours. They may work rotating shifts or be on call. They generally spend part of their time standing to examine or treat patients, and part of their time at a desk completing the required paperwork.

Personal Characteristics

Physicians need the following characteristics:

- the intellectual ability required to successfully complete the required academic training and to continue learning life long
- the ability to get along with people and instill confidence
- the stamina required to work long hours
- emotional strength and maturity
- good communication skills.

They should enjoy finding solutions to problems, dealing with people and directing the work of others.

Educational Requirements

Physicians must complete a three or four year **Medical Doctor (MD) degree program** at an accredited university, followed by post-graduate training in family medicine or other specialty.

In Alberta, MD programs are offered by the following institutions.

- The **University of Alberta** in Edmonton. The entrance requirement is satisfactory completion of **at least** two years of university studies with courses in organic and inorganic chemistry, English, physics, biology, biochemistry and statistics.
- The **University of Calgary**. The entrance requirement is completion of at least three years of recommended Arts and Sciences courses at a recognized post-secondary institution.

Because these are quota programs, many applicants who fulfill the entrance requirements cannot be accepted. Successful applicants are selected on the basis of:

- academic grades
- letters of recommendation
- personal interviews
- the results of a Medical College Admission Test (MCAT).

The required university courses may be taken entirely at the University of Calgary or the University of Alberta or, in part, at other post-secondary institutions.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer. When planning their university studies, prospective students should contact both Faculty of Medicines' admissions offices to ensure that they acquire all of the necessary prerequisites.

In general, the admission requirement for university and university transfer programs is a high school diploma or equivalent with a specified minimum average in English 30, Pure Math 30 and three other appropriate Grade 12 subjects (usually Biology 30, Physics 30 and Chemistry 30).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

After successfully completing an MD program, there are two ways to become a registered practitioner with the College of Physicians and Surgeons of Alberta:

- training to become a family physician which requires an additional two years.
- training to become a specialist physician which requires an additional five to seven years.

Other Requirements

Under Alberta's Medical Profession Act, you must be a registered member of the College of Physicians and Surgeons of Alberta (CPSA) to practice medicine in Alberta.

Employment and Advancement

(section revised JANUARY 2006)

Many physicians work in private practice or are employed by regional health authorities. Others are employed in:

- medical research
- public health
- occupational medicine
- health administration
- overseas service
- military service.

Physicians are part of the larger National Occupational Classification 3112: General Practitioners and Family Physicians. In Alberta, people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,150 Albertans are employed in the General Practitioners and Family Physicians occupational group which is expected to grow 3.5 to 4.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 240 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since physicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for physicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Physicians in private practice are self-employed. Their incomes vary considerably depending on location, specialty and the number of patients they see.

Physicist

Produced DECEMBER 2005

Physicists investigate why our physical environment behaves as it does and solve technological problems.

NOC Number(s): 2111.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

In general, physicists:

- endeavour to understand fundamental processes in nature
- develop practical applications (for example, in electronics, communications, power generation and distribution, aerodynamics, optics and lasers, remote sensing and medicine and health)
- confront and solve technological problems (for example, in diagnostic medical imaging or imaging the interior of the earth).

Many physicists specialize in particular areas such as:

- acoustics (sound and its transmission)
- astronomy and astrophysics (planets, stars and galaxies)
- atmospheric physics (processes in the atmospheres of the Earth and other planets)
- atomic and molecular physics (the structure and behaviour of atoms and molecules)
- biophysics (how living organisms work; for example, how the brain stores and processes information and how plants process light)
- condensed matter physics (solids and liquids, including materials for electronic computer chips, laser diodes, super conductivity, magnetic materials, alloys and plastics)
- cosmology (the universe from creation to the present time)
- econophysics (the application of physical methods to economics)
- environmental physics (the development and application of physical methods to environmental research)
- general relativity (black holes, gravitational radiation)
- geophysics (the Earth, including seismology, meteorology, climatology, aeronomy and oceanography)
- health physics (radiation hazards and how to protect against them)
- mechanics (the influence of forces on matter and the motions of particles in fields of force)
- medical physics (the application of physical principles to the diagnosis and treatment of human disease, including the development and clinical use of radiation tools and other ways of imaging the organs of the body)
- metrology (measurement)
- optics (light, its sources, behaviour and effects)
- photonics (optical networking)
- space and plasma physics (study of the ionized gas existing in space and its impact on various objects, including the earth)
- stable and radioactive isotope physics (the use of isotopic measurements in a wide variety of scientific analyses)
- subatomic physics or particle physics (the fundamental particles and forces in nature)
- thermodynamics (the nature of heat and its effects on matter).

Physicists may study any of these areas by:

- carrying out experiments
- designing sophisticated computer simulations (computational physics)
- searching for and developing theories that organize the results of experiment and computation.

Physicists work with scientists in other fields such as engineering, biology, chemistry, geology, mathematics and computer science, and often combine physics with these sciences.

Working Conditions

Physicists generally work in laboratories, classrooms or offices. They also may work outdoors. Travel is often required.

Personal Characteristics

Physicists need the following characteristics:

- an aptitude for mathematics and an analytical approach to problem solving
- the ability to think independently and creatively
- an interest in building things or understanding how or why things work
- self-motivation and organizational skills
- perseverance
- the ability to work well with others.

They should enjoy synthesizing information and finding innovative solutions to problems, using sophisticated instruments and equipment to perform tasks requiring precision, and supervising the work of others.

Educational Requirements

Most physicists begin their post-secondary education with a four year **Bachelor of Science (B.Sc.) degree in physics**, then go on to earn a master of science (M.Sc.) or a doctoral (PhD) degree in physics or a sub-discipline of physics. Physicists who wish to do original research generally require a PhD and one to five years or post-doctoral research in a university or govenment laboratory. In medical physics, one to two years of after-degree clinical (residency) training is required.

In Alberta, the following post-secondary institutions offer four year degree programs in physics:

- The **University of Alberta** in Edmonton offers four year B.Sc. general and honours programs in physics with specializations in geophysics, mathematical physics and physics; and M.Sc. and PhD programs in physics. The entrance requirement for the bachelor's degree programs is a competitive average (65 to 80 per cent) in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Physics 30 and two approved Grade 12 subjects (Math 31 recommended). The University of Alberta in Camrose also offers degree programs in physics.

- The **University of Calgary** offers a four year B.Sc. program in physics with specializations in applied physics, chemical physics (honours only) and physics; and M.Sc. and PhD programs in physics. The entrance requirement for the bachelor's degree program is a high school diploma with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Chemistry 30 and two other subjects selected from specified lists (Math 31 and Physics 30 recommended).
- The **University of Lethbridge** offers four year degree programs, five year combined degree programs, and M.Sc. and PhD programs in physics. The entrance requirement for bachelor's degree programs is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Physics 30, Pure or Applied Math 30 (or equivalent), Biology 30 or Chemistry 30, and one other appropriate subject (Math 31 recommended).

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Physicists may be employed by or work on a contract basis for:

- universities
- government research establishments
- private industry
- organizations involved in public education
- hospitals.

Employment opportunities for physicists vary depending on whether they have a bachelor's, master's or doctoral degree. Individuals who have a B.Sc. or M.Sc. are more likely to be employed in design and development, teaching (at the high

school or college level), administration or sales. Those who have a PhD are more likely to be involved in basic or applied research, teaching at the university level or administration.

Advancement opportunities vary depending on the place of employment and type of work. Physicists involved in research, or research and development may become project supervisors, directors of research laboratories or managers of research departments. Some physicists eventually move into purely administrative/management positions.

Physicists are part of the larger National Occupational Classification 2111: Physicists and Astronomers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 100 Albertans are employed in the Physicists and Astronomers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since physicists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for physicists.)

Note: University professors are classified in a different occupational group. For more information, see the University Professor occupational profile.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary widely depending on the requirements of the position and the qualifications of the individual.

No salary data is available for the Physicists and Astronomers occupational group.

Physiologist

Produced APRIL 2005

Physiologists are scientists who study the whole organism and cellular functioning in humans, animals and plants.

NOC Number(s): 2121.1
Minimum Education: 8 + years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

In the biological sciences, physiology is a fundamental field defining the functions of organs and tissues and their inter-relationships. It employs numerous techniques and approaches including molecular biology, pharmacology, biochemistry, anatomy, cell biology, engineering and computing science. Many physiologists work in research and teaching. In general, they:

- plan and conduct laboratory experiments
- write papers for scientific journals, reports and grant proposals
- sit on university committees and research grant panels
- attend meetings with other scientists and administrators
- educate medical, paramedical and science students about physiology.

Physiologists who have doctoral (PhD) degrees often start their careers as post-doctoral fellows, then become university professors who teach and oversee research programs. They may specialize in studying areas such as:

- the heart and circulatory system
- individual cell function
- hormones and glandular secretions
- the digestive system
- metabolism (the conversion of food to energy)
- the kidneys and associated body fluids
- the reproductive system
- the lungs and respiratory system
- the nervous system at all levels up to co-ordinated neural functions
- the effects of physical activity on various body systems
- the effects of high altitudes on humans
- the effects of radiation on biological systems
- how genes control body functions
- how biological membranes function
- mathematical modeling of physiological processes.

Working Conditions

Physiologists employed by universities usually divide their time between teaching and research. Teaching requires many hours preparing for class, grading papers and meeting with students.

Physiologists who work as full-time researchers spend most of their time in laboratories but also travel to scientific meetings to present their results. They use a wide variety of electronic, optical, chemical and mechanical devices to discover how the body operates. They may work long hours conducting precise experiments and analyzing results.

Personal Characteristics

In common with other scientists, physiologists need the following characteristics:

- good powers of observation
- the ability to integrate data from many sources and test hypotheses rigorously
- an open and inquiring mind
- excellent oral and written communication skills.

They should enjoy synthesizing information (e.g. analyzing data and developing models) and finding innovative solutions to problems, working with equipment and instruments at tasks requiring precision and co-ordinating or supervising the work of others.

Educational Requirements

University graduates who have a Bachelor of Science (B.Sc.) degree in physiology or a related discipline such as pharmacology, biochemistry, biology, physics, chemistry or engineering may work in the drug or biotech industry. Some physiologists train as physicians, then take advanced degrees in physiology. Post-secondary teaching and research positions generally require a doctoral degree (PhD) followed by postdoctoral work (for more information, see the College, Technical or Vocational Instructor and University Professor occupational profiles).

In Alberta, the following post-secondary institutions offer physiology programs:

- The **University of Alberta** in Edmonton offers four year B.Sc. degree programs in physiology, as well as Masters (M.Sc.) and Doctoral (PhD) degree programs in physiology and doctor of medicine (MD) programs. The entrance requirement for the MD program is satisfactory completion of **at least** two years of university studies with courses in organic and inorganic chemistry, English, physics, biology and statistics. The entrance requirement for the B.Sc. program is an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and Physics 30.
- The **University of Calgary** offers four year B.Sc. degree programs in biology, biochemistry and kinesiology, and M.Sc. and PhD degree programs in physiology through the Medical Sciences program. The entrance requirement for the B.Sc. program is completion of one year of university studies. Applicants for admission to first year at the university should have an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, and three other appropriate Grade 12 subjects (Biology 30, Chemistry 30 and Physics 30 recommended).
- The **University of Lethbridge** offers four year B.Sc. degree programs in biochemistry, biological sciences and neuroscience. The University of Lethbridge also offers a PhD in neuroscience. The entrance requirement is an average of at least 65 per cent in English 30, Biology 30, Chemistry 30, and Math 30 or Pure Math 30 plus a fifth Grade 12 subject (Physics 30 recommended).

For information about related degree programs, see the Physician and Kinesiologist occupational profiles. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutions throughout Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Employment and Advancement
